NEWMONT ACHIEVES STRONG FOURTH QUARTER RESULTS;  
OPERATING AND FINANCIAL TARGETS MET FOR 4TH QUARTER AND FULL YEAR 2001

DENVER, February 6, 2002 -- Newmont Mining Corporation (NYSE: NEM) achieved a strong fourth quarter 2001 performance with net income of \$20.2 million or \$0.10 per common share. Excluding Battle Mountain merger costs and certain non-cash items, Newmont had its best financial quarter of the year, earning \$31.7 million or \$0.16 per share, after tax. Contributing to this performance were on-target gold production and cash costs, and a higher realized gold price. In the year-ago quarter, the company had a net loss of \$33.5 million, or \$0.17 per share. Before merger costs and non-cash items, earnings in the fourth quarter of 2000 were \$34.3 million, or \$0.18 per share.

For the full year 2001, Newmont earned \$13.7 million or \$0.07 per share, before merger and non-cash costs, a 73 percent improvement over earnings of \$7.9 million, or \$0.04 per share, in 2000. Lower exploration expenses, an income tax benefit and significant equity income of \$33 million from the Batu Hijau copper-gold mine more than offset 5 percent lower gold sales and a 4 percent lower average realized gold price of \$271 per ounce as compared to 2000.

After accounting for atypical pre-tax charges including \$60.5 million for corporate restructuring and merger costs associated with the Battle Mountain transaction and \$41 million in asset write-downs, Newmont realized a net loss of \$30.8 million or \$0.16 per share for 2001. The write-downs primarily related to a slightly shorter mine life at Minahasa in Indonesia, which ended mining in October, and inventory adjustments. In 2000, the company's net loss after merger and non-cash costs was \$102.3 million, or \$0.53 per share. Results for 2000 were restated to account for the acquisition of Battle Mountain Gold Corporation in January 2001 on a pooling of interests basis.

Wayne W. Murdy, Newmont's Chairman, President and Chief Executive Officer, said, "I am proud of our organization's fourth quarter performance. In the fourth quarter, we actively pursued our pending acquisitions of Normandy Mining Limited and Franco-Nevada Mining Corporation Limited. Notwithstanding the demands of that process, our employees remained focused on our 2001 goals. These efforts enabled Newmont to report a profit for the year, before certain non-cash items,

Edgar Filing: NORMANDY MINING LTD - Form 425

thereby exceeding our mid-year estimated forecast for breakeven results. In 2001, cash flow from our operations totaled \$381.3 million or \$1.95 per share."

1 of 19

Mr. Murdy continued, "We are pleased by the strengthening gold price over the past six months, with gold currently trading above \$290 per ounce, and welcome analyst forecasts for an improved average gold price in 2002. At the same time, we recognize that gold remains volatile, with a range in 2001 from a low of \$256 per ounce in April to a high of \$293 in September. As an essentially unhedged producer, we adjust our operations to the prevailing spot gold price on an ongoing basis. In 2001, we lowered our production target to 5.4 million ounces of gold from our 2000 output of 5.7 million ounces, including that of Battle Mountain, to focus on cash flow, and we achieved that goal at a total cash cost of \$184 per ounce."

NEW NEWMONT

Newmont remains on schedule for the closing of the acquisitions of Normandy and Franco-Nevada in February, following the Newmont's shareholder meeting and satisfaction of remaining conditions. On January 30, the Franco-Nevada shareholders overwhelmingly approved Newmont's acquisition of Franco-Nevada at a special meeting that marked the closing of a phenomenal 18-year record for Franco-Nevada and the opening of a new chapter for its shareholders as shareholders of Newmont. Newmont will hold its special meeting for shareholders to approve certain matters relating to the acquisitions in Denver on February 13.

Mr. Murdy said, "We believe that Newmont will become the new gold standard for investors around the world. We are focusing our integration efforts to immediately begin capturing anticipated synergies of \$70 million to \$80 million in the first full year. Since our initial announcement in November, we have had tremendous support from our existing shareholder base as well as new interest

## Edgar Filing: NORMANDY MINING LTD - Form 425

from the broader market. Despite the short-term arbitrage pressure on the stock price associated with the acquisitions, in 2001, Newmont's share price rose 12 percent as compared to a 6 percent increase for the Philadelphia Gold and Silver Index and a 13 percent decline in the S&P 500 Index. The new Newmont will offer the most leverage to a rising gold price and is perfectly suited for investment portfolio diversification."

### OPERATING HIGHLIGHTS

For the fourth quarter of 2001, revenues were \$445 million, 15 percent lower than the 2000 quarter, on 20 percent lower equity production of 1.4 million gold ounces. A total cash cost of \$182 per ounce was up from \$164. Total production costs were \$235 per ounce for the fourth quarter compared with \$221 in the 2000 fourth quarter.

For the full year, Newmont booked revenues of \$1.7 billion, an 8 percent decline from the year 2000. North American operations sold 3.2 million equity ounces of gold at a total cash cost of \$217 per ounce in 2001 versus 3.7 million equity ounces at \$197 per ounce in 2000. Gold sales from overseas increased to 2.2 million equity ounces at \$128 per ounce in 2001 from 2.0 million ounces at a total cash cost of \$117 per ounce in 2000. The production level was impacted by less tonnage mined in Nevada, lower ore grades in Nevada, Canada and Peru and corresponding lower overall mill recovery rates in Nevada.

In 2001, Yanacocha in Peru sold 1.9 million ounces (983,000 equity ounces) of gold, a 9 percent increase over 2000, at a total cash cost of \$115 per ounce. Yanacocha's first crushing and agglomeration facility for the La Quinoa deposit started up late in the third quarter and will continue to undergo commissioning adjustments through the first half of 2002, gradually stepping up to its design rate of 132,000 tons per day (120,000 metric tons per day) by the end of June. Fourth quarter and full year production were slightly lower than targeted due to slower leach cycle recoveries for gold and short-term bottlenecks in mining fleet utilization and availability during the commissioning of the new crushing facility. La Quinoa is expected to reach production of one million ounces annually in 2003 to help Yanacocha reach its production goal of 2.5 million ounces annually in 2004.

Excellent operating performance at Batu Hijau in Indonesia provided \$9.8 million and \$33 million in equity income in the fourth quarter and full year 2001, respectively, despite a poor copper market. Total copper sales in 2001 totaled \$447.3 million with an average realized copper price per pound of \$0.70, \$0.12 less than in 2000. For the full year, copper sales increased by 22 percent to 639.9 million pounds (360.0 million equity pounds) at a

---

2 of 19

cash cost of \$0.36 per pound of copper, a 37 percent improvement over 2000. Equity gold sales increased by 65 percent to 295,100 ounces from year 2000.

Mr. Murdy commented, "Batu Hijau is one of the largest and lowest cost copper mines in the world. In 2001, it continued to demonstrate superb operating proficiency that surpassed our production and cash costs targets. The increases in copper and gold sold were the result of higher ore grades, an 18 percent increase in tons mined and 15 percent higher mill throughput from the year 2000."

### FINANCIAL HIGHLIGHTS

## Edgar Filing: NORMANDY MINING LTD - Form 425

General and administrative expenses for 2001 were \$61.2 million, a 4 percent decrease from a year ago. Depreciation and depletion costs of \$300.1 million were 17 percent lower than in 2000, in line with lower production. Consistent with the Company's no-hedging policy, in December 2001, Newmont effectively closed out Battle Mountain's small hedge book, covering approximately 275,000 ounces, by entering into a series of equal, offsetting positions. This transaction provided Newmont approximately \$5 million in cash. During the third quarter of 2001, Newmont also restructured its written call positions, effectively eliminating any future mark-to-market volatility to its net income. As a result of this restructuring, Newmont converted 2.35 million ounces of call options into sales contracts requiring future physical delivery.

Capital expenditures in 2001 totaled \$402 million. At Yanacocha, which is consolidated at 100 percent, capital expenditures were \$277 million, including construction of La Quinua, leach pad expansion and mining fleet additions. Other significant capital projects included \$28 million for the Deep Post underground development in Nevada, \$19 million for heap leach pad expansion and associated conveyor support facility at Zarafshan in Uzbekistan and \$7 million for a new heap leach operation at Kori Kollo in Bolivia. A portion of the capital spent in 2001 included advancement of mine equipment purchases for Yanacocha previously scheduled for 2002.

Newmont had total debt of \$1.3 billion, and a cash balance of \$149.4 million at year-end. Debt net of the Company's cash balance at year-end 2001 was unchanged, resulting in a net debt to total capitalization of 40 percent.

### RESERVES & EXPLORATION

Newmont reported equity proven and probable reserves of 59.6 million ounces of gold, after production depletion, at year-end 2001, down from 66.3 million ounces at year-end 2000, using a \$300 per ounce long-term gold price. North American equity reserves were 31.4 million ounces compared with 35.2 million ounces a year ago. At Yanacocha, gold reserves totaled 34.2 million ounces (17.6 million equity ounces.)

Total company-wide reserves for copper were 6 billion equity pounds. Batu Hijau had 9.8 billion pounds (5.5 billion equity pounds) of copper at the end of 2001, roughly equivalent to year-end 2000 reserves.

Exploration and research expense in 2001 was reduced by 28 percent to \$55.5 million as a result of a depressed gold market. At Yanacocha, the exploration focus was on the complex and deep sulfide zones containing copper-gold mineralization and the near-surface oxide targets for gold. These sulfide and oxide programs completed approximately 300,000 feet (90,632 meters) in 354 drill holes at Yanacocha.

Mr. Murdy said, "Our objective in 2002 at Yanacocha is to advance our understanding of the geologic settings and material types of the mineralized sulfide systems with a focus to locate higher grade copper-gold targets. We are continuing to pursue the long-term potential that we see in the copper-gold and gold mineralization and are pleased with the performance of this world class mineral district. In addition, resource development projects in Nevada will focus on new underground mining opportunities identified near Deep Post, Deep Star, Carlin, Gold Quarry and Twin Creeks. Exploration drilling from surface and underground platforms is designed to outline mineralization that would be readily accessible from existing open pit or underground mines."

Edgar Filing: NORMANDY MINING LTD - Form 425

2002 OUTLOOK

Looking ahead, Mr. Murdy said, "We are working diligently towards closing the Normandy and Franco-Nevada transactions, which will almost double the market capitalization of Newmont and provide the opportunity for further district rationalization and consolidation. Updated estimated production and cost forecasts will be provided as our integration efforts progress. We remain focused on generating superior returns to our shareholders by creating the premier gold investment vehicle with maximum upside gold price exposure." For 2002, on a stand-alone basis, forecasted production is 5.2 million ounces, 4 percent lower than 2001, at approximately the same cash cost per ounce as in 2001.

### CAUTIONARY STATEMENT

This press release contains forward-looking information and statements about Newmont Mining Corporation, Franco-Nevada Mining Corporation Limited, Normandy Mining Limited and the combined company after completion of the transactions. Forward-looking statements are statements that are not historical facts. These statements include financial projections and estimates and their underlying assumptions; statements regarding plans, objectives and expectations with respect to future operations, products and services; and statements regarding future performance. Forward-looking statements are generally identified by the words "expects," "anticipates," "believes," "intends," "estimates" and similar expressions. The forward-looking information and statements in this press release are subject to various risks and uncertainties, many of which are difficult to predict and generally beyond the control of Newmont, Franco-Nevada and Normandy Mining, that could cause actual results to differ materially from those expressed in, or implied or projected by, the forward-looking information and statements. These risks and uncertainties include those discussed or identified in the public filings with the U.S. Securities and Exchange Commission made by Newmont and Normandy, and Franco-Nevada's filings with the Ontario Securities Commission; risks and uncertainties with respect to the parties' expectations regarding the timing, completion and accounting and tax treatment of the transactions, the value of the transaction consideration, production and development opportunities, conducting worldwide operations, earnings accretion, cost savings, revenue enhancements, synergies and other benefits anticipated from the transactions; and the effect of gold price and foreign exchange rate fluctuations, and general economic conditions such as changes in interest rates and the performance of the financial markets, changes in domestic and foreign laws, regulations and taxes, changes in competition and pricing environments, the occurrence of significant natural disasters, civil unrest and general market and industry conditions.

### ADDITIONAL INFORMATION AND WHERE TO FIND IT

In connection with the proposed transactions, Newmont Mining Corporation has filed with the U.S. Securities and Exchange Commission a Registration Statement on Form S-4 (which includes an Offer Document) and a Proxy Statement/Prospectus on Schedule 14A. Investors and security holders are advised to read the Offer Document and the Proxy Statement/Prospectus, which were mailed beginning on January 11, 2002, because they contain important information. Investors and security holders may obtain free copies of the Offer Document and the Proxy Statement/Prospectus and other documents filed by Newmont with the Commission at the Commission's web site at <http://www.sec.gov>. Free copies of the Offer Document and the Proxy Statement/Prospectus and other filings made by Newmont or Normandy with the Commission, may also be obtained from Newmont. Free copies of Newmont's and Normandy's filings may be obtained by directing a request to Newmont Mining Corporation, Attn: Investor Relations, 1700 Lincoln Street, Denver, Colorado 80203, Telephone: (303) 863-7414. Copies of Franco-Nevada's filings may be obtained at <http://www.sedar.com>.

### NEWMONT MINING CORPORATION 4TH QUARTER SUPPLEMENTAL INFORMATION: OPERATIONS SUMMARY

Equity production for fourth quarter of 2001 was 1.4 million ounces of gold at a cash cost per ounce of \$182 and a total production cost per ounce of \$235.

## Edgar Filing: NORMANDY MINING LTD - Form 425

During the 2001 quarter, North American operations produced 835,400 equity ounces of gold at a total cash cost of \$213 per ounce while gold equity production from overseas operations totaled 533,000 ounces of gold at \$129 per ounce. This is compared to 1.18 million equity ounces produced at \$186 per ounce for North America and 624,100 equity ounces at \$116 per ounce for overseas operations in the fourth quarter of 2000. North American operations accounted for 61 percent of production with the remainder from overseas.

In Nevada, fourth quarter 2001 production was 715,100 ounces of gold, 30 percent lower than the 2000 quarter due to a 21 percent decrease in tons mined and lower ore grades from a year earlier. This was partially offset by a 19 percent increase in autoclave throughput at the Lone Tree mill, while maintaining an 95 percent autoclave recovery rate. At the Deep Post underground mine, tons mined were 79,000 at a grade of 0.991 ounce of gold per ton, producing 78,000 ounces, during the 2001 quarter. In its first year of production, Deep Post produced 227,000 ounces in 2001. Nevada's total cash cost of \$219 per ounce and total production cost of \$266 per ounce, compared with \$184 per ounce and \$238 per ounce, respectively, from a year ago. Higher per ounce costs in the recent quarter compared with a year ago were the result of lower ounces produced.

At Yanacocha, slower leach cycle recoveries impacted gold production of 522,900 ounces (268,500 equity ounces) in the 2001 quarter, 4 percent less than the 2000 quarter. Lower production affected total cash costs in the 2001 quarter of \$117 per ounce. Tons placed on the leach pads increased by 30 percent from a year ago. However, this was less than anticipated as mining rate of 485,000 tons per day (tpd) was short of the targeted 550,000 tons per day. This was due to short-term bottlenecks in mechanical availability and utilization of the mining fleet as start-up adjustments were made to the new La Quinoa crushing facility.

During the fourth quarter of 2001, the Batu Hijau mine continued its an outstanding performance, producing 137.3 million pounds (77.2 million equity pounds) of copper, and 82,200 ounces of gold (46,300 equity ounces) at a cash cost of \$0.38 per pound after gold credits. Higher production was due to a one-third increase in the mining rate to 550,000 tons per day over the 2000 quarter, as a result of increased efficiency, dry weather and shorter haul distances. In addition, there was an enhanced mill throughput rate of 142,000 tons per day in the fourth quarter of 2001, a 13 percent improvement over the 2000 quarter, and 8 percent above the design rate of 132,000 tons per day. These factors offset a slightly lower mill recovery rate of 85 percent related to the lower copper grade of 0.61 percent and gold grade 0.008 ounce of gold per ton, which had been expected in the sequencing of the mine plan. The first half of 2002 will see similar grade levels as in the fourth quarter.

Among the other operations in the 2001 fourth quarter, Kori Kollo in Bolivia produced 25 percent more gold than the 2000 quarter totaling 85,100 ounces of gold (75,000 equity ounces), including 17,100 ounces (15,100 equity ounces) from heap leaching, which began in the third quarter of 2001. Cash cost per ounce was \$139 and production cost per ounce was \$206 during the recent quarter. For the full year 2001, Kori Kollo significantly exceeded its production and cost targets, producing 305,600 ounces (269,000 equity ounces), including 24,500 ounces (21,600 equity ounces) from heap leaching, at a cash cost of \$158 per ounce and total production cost of \$229 per ounce. Compared with 2000, this performance demonstrated a 12 percent increase in production, 21 percent lower cash cost and a 24 percent lower total production cost.

At the maturing Golden Giant underground mine in the Hemlo district in Canada, tons mined dropped 12 percent to 264,000 tons at an 8 percent lower grade of 0.25 ounce of gold per ton in the 2001 quarter from a year ago. As a result, Golden Giant's gold production was 16 percent lower at 65,600 ounces at \$182 per ounce.

NEWMONT MINING CORPORATION  
SUPPLEMENTAL COMMODITY FINANCIAL INSTRUMENT INFORMATION

Newmont remains one of the least hedged companies in the gold industry. Consistent with the Company's no-hedging policy, in December 2001, Newmont effectively closed out Battle Mountain's small hedge book, covering approximately 275,000 ounces, by entering into a series of equal, offsetting positions. This transaction provided Newmont approximately \$5 million in cash.

Production Year	Prepaid Forward		Price-Capped Contracts		
	Total Notional Quantity	Price Floor	Price Cap	Total Notional Quantity	Strike
2001					
2002					
2003					
2004					
2005	161,111*	\$300	\$380	500,000	\$350
2006	161,111*	\$300	\$380		
2007	161,111*	\$300	\$380		
2008				1,000,000	\$384
2009				600,000	\$381
2011				250,000	\$392
Total	483,333	\$300	\$380	2,350,000	\$377

\*Associated with these prepaid forward sales is a requirement to deliver 35,900 ounces per year through 2006 and 17,950 in 2007. These deliveries, however, have been offset with simultaneously executed forward purchase contracts at prices increasing from \$263 per ounce beginning in 2000 to \$354 per ounce in 2007.
