specified in the responses to the referenced sections of this filing.

Proxy Statement for the Annual Meeting to be held December 2002,
into Part III of the filing.

Indicate by check mark if disclosure of delinquent filers, pursuant to Item 405 of Regulation S-K is not contained herein and will not be contained, to the best of the Registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K. []

DISCLOSURE REGARDING FORWARD LOOKING STATEMENTS

This Annual Report on Form 10-K includes "forward-looking statements" within the meaning of Section 21E of the Securities Exchange Act of 1934, as amended (the "Exchange Act"). All statements other than statements of historical fact included in this Report, are forward-looking statements, including without limitation the statements under Management's Discussion and Analysis of Financial Condition and Results of Operations and the disclosures about Rocky Mountain Gas, Inc. and plans for developing its coalbed methane acreage. In addition, whenever words like "expect," "anticipate" or "believe" are used, we are making forward-looking statements.

Although we believe that our forward-looking statements are reasonable, we don't know if our expectations will prove to be correct. Important future factors that could cause actual results to differ materially from expectations include: Domestic consumption rates for natural gas; domestic market prices for natural gas, uranium, gold, and molybdenum; the amounts of gas we will be able to produce from our coalbed methane properties; the availability of permits to drill and operate coalbed methane wells; whether and when gas transmission lines will be built to reasonable proximity to our coalbed methane properties; and whether and on what terms the capital necessary to develop our properties can be obtained. The forward-looking statements should be carefully considered in the context of all the information set forth in this Annual Report.

PART I

ITEM 1 AND ITEM 2. BUSINESS AND PROPERTIES.

(A) GENERAL.

U.S. Energy Corp. is a Wyoming corporation (formed in 1966) in the business of acquiring, exploring, developing and/or selling or leasing mineral properties. In this Annual Report, "we", "company" or "USE" refers to U.S. Energy Corp. including subsidiaries unless otherwise specifically noted. Our fiscal year ends May 31.

In fiscal 2002, most of our business activity was devoted to the coalbed methane, i.e., acquiring acreage, drilling exploratory wells, testing the wells, and negotiating the purchase of a coalbed methane ("CBM") producing field. The coalbed methane gas activities are conducted through Rocky Mountain Gas, Inc ("RMG"), a Wyoming corporation owned 51.2% by USE and 40.5% by Crested Corp. at May 31, 2002, Crested is a 70.5% majority-owned subsidiary of USE, see below. Properties of RMG are held in Wyoming and southeastern Montana. As of the filing date of this Annual Report, RMG holds approximately 280,486 gross mineral acres of coalbed methane properties.

Edgar Filing: US ENERGY CORP - Form 10-K/A

We also hold commercial properties, most of which are located in Utah that were acquired as part of a uranium property and mill acquisition. In fiscal 2002, only the commercial properties produced revenues. For financial statement presentation purposes, the Company has two segments of business; minerals and commercial operations (motel, real estate and airport), see note I to the financial statements. However, presently the Company's business priority is focused mainly on CBM.

We have conducted exploratory drilling and testing on certain of the coalbed methane properties, but in general, additional work (gathering production data from a producing property, and on other properties, the dewatering of completed wells, and drilling and dewatering more wells) will have to occur to establish if we have any proved reserves. Specifically, we expect to make a determination whether there are proved reserves on our producing property (Bobcat property) by February 14, 2003, and on another property (Clearmont, which is not now in production) by April 30, 2003. We did not receive any revenues from coalbed methane

2

gas sales through the end of the most recent fiscal year (May 31, 2002), although after that date, we have been selling coalbed methane gas from the producing Bobcat property (bought in June 2002).

For detailed information about our coalbed methane properties and business strategy, please see "Minerals - Coalbed Methane" below.

We don't know if anything of value will result from our activities in the coalbed methane area: Only a limited number of exploratory wells have been drilled, and there is not yet enough information from these wells to determine if they contain proved reserves; gas prices are low in the Powder River Basin (our area of activity), and continued low prices will affect not only the economics of the producing Bobcat property, but also the economics of the exploration projects as they move into production in the future. In addition, delays in obtaining permits needed for continued exploration could delay our coalbed gas plans, and more funding may be needed but may not be available.

USE and Crested originally were independent companies, with two common affiliates (John L. Larsen and Max T. Evans; Mr. Evans died in calendar 2002). In 1980, USE and Crested formed a joint venture ("USECC") to do business together (unless one or the other elected not to pursue an individual project). As a result of USE funding certain of Crested's obligations from time to time (due to Crested's lack of cash on hand), and Crested subsequently paying these debts by issuing common stock to USE, Crested became a majority-owned subsidiary of USE in fiscal 1993. In fiscal 2001, Crested issued another 6,666,666 shares of its common stock to reduce Crested's debt owed to USE by \$3.0 million, which increased USE's ownership of Crested to 70.5%. All of USE's (and Crested's) operations are in the United States. Principal executive offices are located in the Glen L. Larsen building at 877 North 8th Street West, Riverton, Wyoming 82501, telephone 307.856.9271.

Most of the Company's (USE's) operations are conducted through subsidiaries, the USECC Joint Venture with Crested, and jointly-owned subsidiaries of USE and Crested.

The Company's subsidiaries are:

Edgar Filing: US ENERGY CORP - Form 10-K/A

Subsidiary -----	Percent Owned by USE* -----	Primary Business Conducted -----
Plateau Resources, Ltd.	100.0%	Uranium (Utah) - Inactive - shut down; Motel/real estate - Active
Energx, Ltd.	90.0%	Gas - Inactive - shut down
Four Nines Gold, Inc.	50.9%	Contract Drilling/Construction - Inactive (since 2001)
Sutter Gold Mining Company	66.3%	Gold (California) - Inactive - shut down
Crested Corp.	70.5%	Uranium, gold and molybdenum properties (all inactive and shut down), and explorati activities on coalbed methane properties
Yellowstone Fuels Corp.	35.9%	Uranium (Wyoming) - Inactive - shut down
Rocky Mountain Gas, Inc.	91.7%	Coalbed methane exploration
Northwest Gold, Inc.	96.0%	Gold (Montana) - Inactive - shut down
USECC Joint Venture	50.0%	Uranium (Wyoming, Utah), gold and molybdenum,** all inactive and shut down; and coalbed methane exploration

3

*Includes ownership of Crested Corp. in RMG and Sutter.

**There are no plans to put the molybdenum property into production in the foreseeable future. See "Inactive Mining Properties - Molybdenum."

Until September 11, 2000, USE, USECC and Kennecott Uranium Company ("Kennecott") owned the Green Mountain Mining Venture ("GMMV"), which held a large uranium deposit and uranium mill in Wyoming. On September 11, 2000, USE and Crested settled litigation with Kennecott involving the GMMV by selling their interest in the GMMV and its properties back to Kennecott for \$3,250,000 and receiving a royalty interest in the uranium properties. The GMMV properties are shut down. Kennecott also assumed all reclamation obligations on the GMMV properties; reclamation obligations for an ion exchange facility located on properties outside the GMMV were not assumed by Kennecott, see "Sheep Mountain Partners - Properties" below. Other uranium properties and a uranium mill in southeast Utah are held by Plateau Resources Ltd., a wholly-owned subsidiary of USE. The Utah uranium properties are shut down.

The mineral properties held by Sutter Gold Mining Company ("SGMC"), a majority-owned subsidiary of USE, are shut down because the current price of gold does not permit raising the capital necessary to put the properties into production.

In coalbed methane, we compete against many companies, some of which are much larger and better financed than the Company. The principal area of competition is encountered in the financial ability to acquire good acreage positions and drill wells to explore coalbed methane potential, then, if warranted, drill production wells and install production equipment (gathering systems, compressors, etc.).

Edgar Filing: US ENERGY CORP - Form 10-K/A

We own a royalty interest in a molybdenum property in Colorado; the property is owned by Phelps Dodge Corporation, a worldwide integrated minerals company with inventories of exploration, development stage, and producing properties, involving numerous metals and other minerals. We believe at the present time, Phelps Dodge does not have a plan to place the molybdenum property into production.

In the motel, real estate and airport operations area (significant in terms of fiscal 2002 revenues but not our primary business focus), we own and manage an office building (where our headquarters are located), and small parcels of land, all in Riverton, Wyoming, and a small amount of additional acreage elsewhere in Wyoming and Colorado. We also own a townsite, a motel and convenience store, and other commercial facilities in Utah. There is no significant competition in this area; although parcels are sold from time to time, we are not in the land development business.

(B) FINANCIAL INFORMATION ABOUT INDUSTRY SEGMENTS.

During the three fiscal years ended May 31, 2002, for technical financial presentation purposes, we operated in three business segments: (i) coalbed methane gas exploration (and holding shut down mines and mineral properties), (ii) motel, real estate, and airport operations, and (iii) contract drilling/construction (principally in fiscal 2000 and the first quarter of fiscal 2001). Contract drilling/construction operations were shut down as an operating segment in fiscal 2001. The principal products of the operating units within each of the reportable industry segments for the three fiscal years ended May 31, 2002 are set forth in the table below. For more information, see note I to the financial statements.

While we technically had three segments in this three year period, most of our activities in minerals, motel/real estate/airport, and contract drilling/construction have ceased or have been severely curtailed. The only current activities of a material and recurring nature are in coalbed methane, and motel operations and management services.

4

INDUSTRY SEGMENTS

Coalbed Methane Gas Exploration
(and holding of mining properties
which are shut down)

Motel, Real Estate and
Airport Operations

PRINCIPAL PRODUCTS

Acquisition of coalbed methane properties, and exploration and development of such properties for coalbed methane gas. This activity is material and recurring, and is our principal business focus. Sales and leases of mineral-bearing properties and, from time to time, the production and/or marketing of uranium, gold and receipt of advance royalties on molybdenum. Activities in uranium, gold and molybdenum are shut down as recurring activities.

Operation of a motel and rental of real estate, operation of an aircraft fixed base operation (fuel sales, flight instruction and

Edgar Filing: US ENERGY CORP - Form 10-K/A

aircraft maintenance), and various contract services, including managerial services for subsidiary companies. Only the motel and real estate, and management services activities remain active now. Though significant in terms of contributions to revenues on a historical basis, these operations are auxiliary to the principal business focus of the company (coalbed methane).

Contract Drilling/Construction

Contract drilling of coalbed methane gas wells, construction of drill sites, gas pipe lines, reservoirs and reclamation of locations. This activity has been shut down.

(C) NARRATIVE DESCRIPTION OF BUSINESS (INCLUDING ITEM 2 - PROPERTIES).

COALBED METHANE (AND INACTIVE MINING PROPERTIES)

COALBED METHANE

GENERAL. Rocky Mountain Gas, Inc. ("RMG") was incorporated in Wyoming on November 1, 1999 for business in the coalbed methane industry in Wyoming and Montana. RMG is a subsidiary of the Company (owned 51.2% by the Company and 40.5% by Crested as of May 31, 2002).

At September 25, 2002 RMG holds leases and options on approximately 277,586 gross acres of federal, state and private (fee) land in the Powder River Basin of Wyoming and Montana. Most of this acreage was acquired in the fiscal year ended May 31, 2001. As of September 25, 2002 there are no producing CBM wells on any of the acreage. Not included in this acreage total is the 1,940 gross acres in the Bobcat Property, a producing CBM property acquired by RMG in June 2002.

Through May 2002, 58 CBM wells have been drilled, almost all with funds provided by industry partners CCBM, Inc. and SENGAI (see below). Reserves have not been established for any of the properties on which wells have been drilled.

Independent reserve evaluations will be conducted and reported by February 14, 2003 for the Bobcat property (bought as a producing property in June 2002), and by April 30, 2003 for the Clearmont prospect (undrilled acreage acquired in fiscal 2001, drilling started in fiscal 2002). In the case of the Bobcat property, reliable daily production data is being obtained (well gas pressure, water production, etc.) to provide the necessary data base for a reserve evaluation. For the Clearmont property, the current dewatering process

5

should be completed and initial gas sales commence in early 2003, which will provide the necessary data base for a reserve evaluation of that property.

In summary, the valuation process for the investments in Bobcat will be completed by February 14, 2003, and for Clearmont by April 30, 2003. See "Acquisition and Exploration Capital Expenditures" below. The valuation will be made when there is enough information to do so. If production has not reached

Edgar Filing: US ENERGY CORP - Form 10-K/A

levels that are economic at the gas prices on evaluation date, there would be no proved reserves on the subject property.

We have not established that our investments in coalbed methane properties and exploration activities will yield anything of value. We will not be able to make that assessment until the presence, or absence, of reserves on the properties is established. The first properties to be evaluated will be Bobcat and Clearmont. Other properties (especially Castle Rock and Kirby) are very large and will require the drilling of numerous exploratory wells and extended dewatering periods for each group or "pod" of wells (from 6 to 18 months after drilling and completion) before an assessment of reserves can be made. In some areas where no other coalbed methane wells on adjacent properties are dewatering the coal seam, the dewatering process could take as long as 24 months.

Among the uncertainties we face in the process of determining if our coalbed methane investments will yield value are the following: Prices for gas sold in the Powder River Basin are the lowest in the United States and may not improve enough, over a sustained time period, to make many properties economic; capital (in addition to the \$2,245,000 at May 31, 2002 remaining from CCBM, Inc.'s drilling fund) to continue exploration efforts may be needed but not available; and permitting issues may delay further work. An unfavorable confluence of these uncertainties, if realized, could result in a write-down of the carrying value of properties which don't produce enough gas at low prices to be economic; the write-down of the carrying value of other properties which need more wells drilled and dewatered to improve the economics of production (but the capital isn't available); and/or the delay (whether from lack of capital or permitting problems) in establishing reserves for the larger prospects where many wells will have to be drilled to assess to value of the properties.

ACQUISITION AND EXPLORATION CAPITAL EXPENDITURES

From inception on November 1, 1999 through May 31, 2002, RMG incurred total acquisition (purchase price and holding costs) and exploration costs (drilling and completion) on coalbed methane properties of approximately \$6,170,600. Unproved coalbed methane properties on the company's balance sheet have been reduced by \$1,125,000 to reflect the reduction of the full cost price as a result of the principal payment made by CCBM.

The following table shows certain information regarding the gross costs incurred.

	Year Ended May 31,	
	2002	2001
Acquisition costs	\$ 368,700	\$ 870,600
Exploration	87,400	283,900
	\$ 446,100	\$ 1,154,500

Acquisition costs included amounts paid for properties, delay rentals, lease option payments, and general and administrative costs directly attributable to the acquisitions.

The recorded amounts for acquisition and exploration of \$4,995,600 and \$5,881,700, represent 16.3% and 19.3% of total assets at May 31, 2002 and 2001.

Edgar Filing: US ENERGY CORP - Form 10-K/A

We use the full-cost method of accounting for gas properties. Under this method, all acquisition and exploration costs are capitalized in a "full-cost pool" as incurred. Depletion of the pool will be recorded using the unit-of-production method. To the extent that such capitalized costs in the full-cost pool (net of depreciation, depletion and amortization and related deferred taxes) exceed the present value (using a 10% discount rate) of estimated future net after-tax cash flows from proved gas reserves (which will be established by the reserve reports to be obtained by the company), the excess costs will be charged to operations.

If it is determined that there are no reserves on the Bobcat or Clearmont properties, all acquisition and exploration costs previously capitalized for those properties will be written-down and charged to operations. To the extent reserves are established to be less than such costs, the costs will be written-down to the amount of present value of the reserves. In this event, assets would decrease and expenses would increase. Once incurred, a write-down of gas properties can't later be reversed.

In addition, if at some point in the future the exploration work on our other prospects (in particular the larger prospects) would be delayed because of lack of capital or permitting delays, or both, with the result that it cannot be established whether or not proved reserves exist on the properties, the exploration costs for those properties would be written-off.

When reserve reports are obtained on our properties, any resulting impact on the financial statements will be reported in the next periodic filing with the SEC.

OVERVIEW OF RMG. As of the filing of this report, we hold leases and options to develop approximately 280,486 gross mineral acres (including 43,711 acres we have options on) under leases from the United States Bureau of Land Management, the states of Wyoming and Montana, and private landowners. Table 1 shows the total gross and net lease acres held in each prospect, and the amount of such acreage held by RMG and by companies with which RMG has agreements (CCBM, Inc. and Quaneco, L.L.C.). These agreements are summarized under "Carrizo - Purchase and Sale Agreement" and "Quaneco - Agreement." Acreage data assumes CCBM completes its obligations; CCBM will own its 50% working interest in wells drilled under CCBM's drilling fund commitment, but if CCBM does not complete its purchase obligations, CCBM would not be entitled to a working interest in the remaining undrilled acreage.

CCBM currently has purchase rights to acquire a 6.25% working interest in the Castle Rock prospect, and owns a 6.25% working interest in eight wells in Castle Rock, which were drilled by Suncor Energy Natural Gas America, Inc. ("SENGAI"). RMG's and CCBM's interests in the Castle Rock prospect, as shown in Table 1, reflect the completion of SENGAI's drilling program in late calendar 2001. SENGAI elected not to exercise its option under an Option and Farmin Agreement on February 8, 2002. See the summary below, and "SENGAI - Option and Farmin Agreement."

Prospects are evaluated for coal potential using available public and industry data, taking into account proximity to other positions held by RMG and existing or planned gas transmission lines, and whether drilling and production permits can be obtained and the costs thereof. The final decision to acquire a prospect is made by the president of RMG. Well drilling and testing is done by outside contract drilling companies. Drilling results (cores, gas and water flow rates, and other data) are evaluated by RMG staff, using customary technical methods, to determine if any zones encountered in the well should be completed for production. Completion requires setting casing pipe down to the zone(s), installing pumps, and installing and setting up the necessary surface equipment (for example, water disposal lines and water holding tanks for evaluation wells in Montana, pending production permitting approval and water holding ponds in

Edgar Filing: US ENERGY CORP - Form 10-K/A

Wyoming). The decision whether to complete the well is made by RMG's president.

7

Table 1 reflects RMG's, Quaneco's and CCBM's acreage position as of the filing of this report. Table 1 does not reflect the reduction in net acreage held by RMG if Anadarko Petroleum, Inc. exercises its option to back in for a 25% working interest on 43,711 gross acres within the Oyster Ridge prospect. Also, 43,711 of the acres shown as held in Oyster Ridge, assume we continue to earn acreage under the drill-to-earn-acreage provisions of the option agreement with Anadarko. See "Description of Prospects - Oyster Ridge" below.

TABLE 1

Project and Date Acquired	Gross Lease Acres	Net Lease Acres	RMG Net Acres	Quaneco Net Acres	CCBM Net Acres
Castle Rock Jan. 2000	123,840	111,567	48,811	55,784	6,973
Kirby Jan. 2000	80,254	74,512	18,628	37,256	1,112
Bobcat June 2002	1,940	930	465	0	0
Oyster Ridge Dec. 1999	65,247	65,247	25,729	0	2,289
Clearmont Jan. 2000	6,305	3,745	1,873	0	1,873
Sussex Jan. 2000	640	640	320	0	0
Finley Jan. 2000	160	160	80	0	0
Baggs North Jan. 2000	120	120	60	0	0
Gillette North Jan. 2000	80	80	40	0	0
Arvada Jan. 2000	1,900	1,700	850	0	0
TOTAL	280,486	258,701	96,856	93,040	5,154

We own a 25% working interest (20% net revenue interest) on 80,254 gross and 74,512 net acres in the Kirby prospect (southeast Montana) and a 50% working interest (from 30% to 50% net revenue interest) on 72,622 net acres in other prospects (all in Wyoming). We own a 43.75% working interest (35% net revenue interest) in the Castle Rock prospect on 123,840 gross and 111,567 net acres in southeast Montana. CCBM, Inc., a subsidiary of Carrizo Oil and Gas, Inc., can purchase a 6.25% working interest in our acreage (6,973 net acres) of the Castle Rock prospect if they meet certain payment obligations. In July 2001, we sold a

Edgar Filing: US ENERGY CORP - Form 10-K/A

50% working interest in all our coalbed methane leases, except at Castle Rock, to CCBM for \$7,500,000, plus other considerations. The acreage data above reflects this transaction.

CCBM will pay up to \$5,000,000 for drilling and completing coalbed methane wells on the properties owned by RMG and CCBM. Drilling started on the Clearmont prospect in Wyoming in August 2001. This drilling program should be sufficient to drill a total of approximately 60 coalbed methane wells to completion or abandonment stage. We have a carried working interest in all of the wells drilled in these programs.

8

As of August 15, 2002, we had set casing on 31 wells (80 acre spacing units) at the Clearmont prospect and are now in the process of drilling additional wells. No reserves have been established to date. Drilling permits for 58 additional wells have been issued for the Clearmont prospect.

A total of 58 wells have been drilled on RMG acreage to through May 31, 2002: five in fiscal 2001 53 in fiscal 2002. Nineteen of the wells were drilled by SENGAI in Castle Rock under the terms of the Suncor Option and Farmin Agreement (see below). Eleven of those 19 wells were stratigraphic wells and will be reclaimed by Suncor; 8 of those 19 wells were completed and are owned by RMG (93.7% working interest) and CCBM (6.25% working interest), as Quaneco opted out of maintaining a working interest in the 8 wells. Other than the Castle Rock wells, RMG and CCBM both have a 50% working interest in all of these wells (see Table 2 below). For information on the 19 wells drilled by SENGAI in Castle Rock, see "SENGAI - Option and Farmin Agreement" below.

As of May 31, 2002, CCBM and RMG have spent approximately, \$2,775,000 of the \$5,000,000 drilling fund. We are relying on the \$2,245,000 balance to pay for 100% of the drilling and completion costs on up to 33 more wells currently permitted, for which work is scheduled to start September 2002: 16 wells on the Clearmont prospect (estimated costs \$1,255,000); 9 wells on the Bobcat prospect (estimated costs \$800,000); 6 wells on the Arvada prospect (estimated costs \$550,000); and 2 wells on the Oyster Ridge prospect (estimated cost \$150,000). Like previous wells drilled with the CCBM drilling fund, RMG will have a 50% carried working interest with no financial obligation to RMG for drilling and completion costs until after CCBM has spent \$5,000,000. Work would be delayed if CCBM were not able to fund these costs. Presently, we do not have the capital resources to fund these costs, and would have to obtain the necessary capital from other industry partners or from sale of equity in the Company.

Future annual financial obligations for our coalbed methane properties consist of approximately \$286,300 for fiscal 2003 in acreage rental fees to lessors, which will be paid 50% by RMG and 50% by CCBM on all acreage except Castle Rock, and 21,536 acres within Oyster Ridge which are not covered by the option with Anadarko. Costs and fees for Castle Rock will be paid 43.75% by RMG, 6.25% by CCBM, and 50% by Quaneco, except for the eight wells owned by RMG and CCBM, which will be paid 93.75% by RMG and 6.25% by CCBM.

Table 2 shows the wells drilled on RMG's prospects from June 1, 2000 through May 31, 2002. Under the agreement with Carrizo, RMG has a carried working interest in all these wells (with the exception of a \$156,634 payment that was made by RMG to cover 50% of a non-consent cost for 12 wells; CCBM also paid \$156,634 to cover 50% of their cost in acquiring a non-consent working interest in those 12 wells), as CCBM has paid for all drilling and completion

Edgar Filing: US ENERGY CORP - Form 10-K/A

costs on the wells other than the 19 Castle Rock wells. RMG has a carried working interest in the 8 Castle Rock wells which were completed (out of the 19 drilled in that prospect), as SENGAI paid for all drilling and completion costs on the 8 Castle Rock wells under a drilling program completed in December 2001. RMG owns a 93.75% working interest and CCBM owns a 6.25% working interest in the 8 Castle Rock wells (CCBM paid for its interest in these wells, see "SENGAI - Option and Farmin Agreement"). With the exceptions noted above, all the wells on the Oyster Ridge, Clearmont and Arvada prospects have been drilled at CCBM's sole expense since its participation began on June 30, 2001. Table 2 lists the number of wells drilled, the total costs and the remaining number of wells currently permitted for drilling as of May 31, 2002.

* Drilled by SENGAI

** These costs include an additional \$169,314 spent on the two wells drilled during fiscal 2001.

BOBCAT PROPERTY. On April 12, 2002, the Company and RMG signed an agreement to purchase working interests in approximately 1,940 gross acres of coalbed methane properties in the Powder River Basin of Wyoming. The contract closed on June 4, 2002. The Company paid the seller \$500,000 cash and another \$150,000 by issuing 37,500 shares of its restricted common stock to the seller; CCBM paid \$500,000 cash to the seller and Carrizo Oil & Gas, Inc. issued its restricted shares of common stock valued at \$150,000. The properties are located approximately 25 miles north of Gillette, Wyoming, in Campbell County. To date, 18 coalbed methane wells have been drilled; 13 wells are currently hooked up and produced in June 2002 at a combined gross rate of approximately 878,000 cubic feet of gas per day (878 mcf) (288 Mcf net rate to our working interest) from the two primary coals on the property: the Cook coal (11 wells) at 650 feet, and the Canyon coal (2 wells) at 450 feet. Production began in late December 2001 (before RMG acquired the property). This net rate reflects the average 32.8% working interest (26.2% net revenue interest) in the 13 wells now producing. Our

Edgar Filing: US ENERGY CORP - Form 10-K/A

working interest in all the Bobcat acreage is an average of 27.6% (net revenue interest 22%).

There are no proved reserves established for this property.

For August, 2002, RMG received an average price of \$1.33 per Mcf (1,000 cubic feet) for the 30,404 Mcf of gas sold from the Bobcat field, with prices ranging from \$0.83 to \$1.79 per Mcf. See "Gathering and Transmission of CBM Gas" below. The property is currently producing at uneconomic rates of production at these prices. RMG is replacing and upgrading some equipment and adding a compressor, with the expectation of improving production volumes through the remainder of 2002 and thereafter. An independent evaluation of CBM reserves will be undertaken and completed in February 2003, regardless of whether production increases from the August 2002 levels, and regardless of gas prices when the reserve evaluation is made. Reserve information will be disclosed when available. No independent reserve evaluation has been started to date, as RMG needed to take over operations of the field and obtain data after the property was purchased in June, 2002.

Permits have been issued for drilling 30 more wells on 80 acre spacing.

CCBM has exercised its right to participate in purchase of the Bobcat property, for 50% of the interests in the property subject to the agreement. For information on agreements with CCBM, please see "Carrizo - Purchase and Sale Agreement" below. RMG operates the properties.

10

The seller keeps as an overriding royalty interest all net revenue interest in the properties in excess of 80%. RMG and CBM each hold an average of 31% working interest and an average of 25% net revenue interest, in the drilled wells.

CARRIZO - PURCHASE AND SALE AGREEMENT. On July 10, 2001, RMG closed a Purchase and Sale Agreement with CCBM, Inc., a Delaware corporation which is wholly-owned by Carrizo Oil & Gas, Inc., Houston, Texas (NMS "CRZO"). The agreement between CCBM and RMG is intended to finance the further exploration of the acreage prospective for coalbed methane currently owned by RMG in Montana and Wyoming, and to acquire and develop more acreage in Wyoming and the Powder River Basin of Montana.

RMG has assigned CCBM an undivided 50% interest in all of RMG's existing coalbed methane properties (with the exception of Castle Rock of which only a 6.25% working interest was assigned) for a purchase price of \$7,500,000 by a promissory note payable in principal amounts of \$125,000 per month plus interest at an annual rate of 8%, over 41 months (starting July 31, 2001) with a balloon payment due on the forty-second month. These properties consisted of the Kirby, Oyster Ridge, Clearmont, Sussex, Finley, Baggs North, and Gillette North properties. The 50% undivided interest is pledged back to RMG to secure the purchase price, and will be released 25% when 33.3% of the principal amount (\$2,500,000) of the purchase price is paid, another 25% when total principal payments reach 66.6% of the principal amount (\$5,000,000) of the purchase price, and the balance of the total 50% undivided interest when all of the principal amount (\$7,500,000) of the purchase price, has been paid.

CCBM has the right to participate in other properties RMG may acquire (like

Edgar Filing: US ENERGY CORP - Form 10-K/A

the Bobcat property) under the area of mutual interest ("AMI"), see Agreement for Purchase of the Bobcat Property" above, and information on the AMI below.

To start exploration, and as part of the consideration for the acquisition, CCBM agreed to pay \$5,000,000 to drill and complete from 30 to 60 wells on the coalbed properties. RMG will be "carried" for its 50% interest in these wells, and will not be required to pay any of such costs. After the initial \$5,000,000 has been spent, RMG and CCBM each will pay for their 50% share of costs in subsequent wells, and also will pay for their 50% share of operating costs for the wells drilled and completed in this drilling program. Without CCBM's consent, none of the drilling funds can be used for operations associated with water disposal wells, gas compression beyond 100 PSIG, or for facilities downstream of compression beyond 100 PSIG. CCBM will earn a 50% working interest in each well location (80 acres) and gas production therefrom, regardless of the status of payments on the promissory note.

Drilling under the CCBM agreement started in August 2001. As of May 31, 2002, CCBM has spent approximately \$2,245,000 of the \$5,000,000 work commitment on the drilling of 22 wells at Clearmont, 4 wells at Oyster Ridge, 1 well at Arvada, and has funded \$225,000 of the drilling conducted by SENGAI in Montana as part of the Quaneco agreement. Amounts remaining out of the \$5,000,000 will be used for drilling during the remainder of fiscal 2002 and on into fiscal year 2003, or applied to property acquisitions, as agreed upon by the parties. If less than the entire \$5,000,000 is spent within two years (subject to extensions due to force majeure), CCBM shall pay RMG one-half the unspent portion of the \$5,000,000. However, this payment obligation back to RMG is subject to RMG complying with all of the terms and provisions of the Purchase and Sale Agreement, the joint operating agreement, and the procedures therein set forth regarding authorizations for expenditures to drill \$5,000,000 worth of "reasonable wells." This means wells which meet these economic criteria: (1) individual well cost (including hook-up to sales) must meet a projected internal rate of return in excess of 15% at prevailing market prices; (2) the wells must be on acreage blocks that are touching and contain minimum sizes (Kirby prospect, at least 2,560 acres; Clearmont, at least 640 acres; and Arvada, at least 480 acres); and (3) no more than 10 wells per calendar year at Oyster Ridge will qualify as reasonable. The intent is for CCBM to spend \$2,500,000 on behalf of RMG on drilling and completing "reasonable wells." If CCBM fails to do this despite a total of \$5,000,000 of reasonable well

11

proposals by RMG, then CCBM shall be obligated to pay any remaining unspent portion of the \$2,500,000 directly to RMG.

In addition to its one-half share of revenues in proportion to its one-half share of the working interest, CCBM will be entitled to a credit (applied as a prepayment of the purchase price for the undivided 50% interest in RMG's acreage), equal to 20% of RMG's net revenue interest from wells drilled with the \$5,000,000 drilling budget, until the amount of that credit in favor of CCBM equals \$1,250,000.

RMG is the designated operator under a Joint Operating Agreement between RMG and CCBM, which governs all operations on the properties subject to the Purchase and Sale Agreement between RMG and CCBM subject to pre-existing JOA's with other entities, and operations or properties in the area of mutual interest ("AMI"). The AMI four-year term ends June 30, 2005. It covers the entire state of Wyoming, and the Powder River Basin of Montana, but will be reduced if CCBM does not obtain at least \$20 million for future property acquisitions (see

Edgar Filing: US ENERGY CORP - Form 10-K/A

below).

A management committee oversees all operations subject to the Purchase and Sale Agreement, with two members each from CCBM and RMG, however, RMG shall have a tie-breaking vote until the \$5,000,000 drilling commitment has been expended and until the purchase price has been paid. Once the \$5,000,000 drilling commitment has been expended and the full purchase price is paid, RMG will allocate (with Quaneco's consent) to CCBM one of RMG's managing member positions with Powder River Gas LLC, which is the operative entity for the Montana acreage RMG holds with Quaneco L.L.C.

With respect to the Castle Rock prospect in Montana, which was subject to the agreement with SENGAI, RMG was entitled to have CCBM pay for \$225,000 of RMG's drilling obligations; for this funding (part of the \$5,000,000 drilling program with CCBM), CCBM received an undivided 6.25% working interest on each well so drilled and the 80 acre spacing allocated to each such well, i.e. one-half of our 12.5% working interest, during the SENGAI drilling program. CCBM made the \$225,000 payment to RMG on March 26, 2002, and RMG has subsequently paid SENGAI that amount to fulfill its obligations to SENGAI and Quaneco. See "Quaneco - Agreement" and "SENGAI - Option and Farmin Agreement."

Under the Purchase and Sale Agreement with CCBM, CCBM will use its best efforts to obtain financing to raise no less than \$20,000,000 to be used by RMG to acquire more properties in the AMI. CCBM would have a 50% working interest in properties so acquired. If CCBM's efforts were not successful by June 30, 2002, the AMI was to be reduced to a 6-mile radius from all existing properties held jointly by RMG and CCBM unless RMG agreed to an extension of this time frame. RMG has extended the time frame for CCBM raising the funds, to June 30, 2003.

QUANECO - AGREEMENT. On January 3, 2000, RMG purchased a 50% working interest and 40% net revenue interest in the Castle Rock and Kirby prospects in the Powder River Basin of southeast Montana consisting of approximately 185,000 net mineral acres from Quaneco, L.L.C. (formerly Quantum Energy, L.L.C., Cleveland, Ohio and Oklahoma City, Oklahoma). The acreage includes 88,410 net acres of Bureau of Land Management ("BLM") land, 14,916 net acres of state land (Montana), and 82,775 net acres of fee land. In fiscal 2000 and 2001, RMG paid Quaneco the cash purchase price of \$5,500,000 for the acreage.

A separate provision in the Quaneco agreement required RMG to spend \$2,500,000 to drill and complete 25 wells. Under the subsequent Option and Farmin Agreement with SENGAI, SENGAI paid \$2,000,000 in their first drilling program on this prospect, and RMG paid \$250,000. Of this amount, \$225,000 was paid to RMG by CCBM and subsequently paid over to SENGAI, leaving RMG with a net obligation of \$25,000, which was paid. RMG had previously performed work and paid costs for a credit of approximately \$250,000 on the Castle Rock and Kirby prospects. All of RMG's drilling obligations to Quaneco therefore have been fulfilled.

The Kirby prospect, owned originally by RMG and Quaneco, and now CCBM as well, is operated through Powder River Gas, LLC, a Wyoming limited liability company. Initial CBM well sites have been selected by the management committee in which Quaneco and RMG currently have equal representation. USECC has the right to provide drilling services on the first 25 wells drilled by Powder River Gas, LLC based on competitive drilling rates in the area surrounding the wells to be drilled. Thereafter, USECC will have the right to submit bids on a competitive basis to Powder River Gas LLC for drilling contracts on additional

Edgar Filing: US ENERGY CORP - Form 10-K/A

acreage. CCBM has recently acquired 50% of RMG's interest in the Kirby prospects leaving ownership interest at 25% RMG, 25% CCBM, and 50% Quaneco.

SENGAI - OPTION AND FARMIN AGREEMENT. On February 8, 2001, RMG closed an Option and Farmin Agreement with Suncor Energy Natural Gas America, Inc. ("SENGAI"). SENGAI had an option on two blocks of acreage covering 111,566 net acres in southeast Montana; the option on the second block of acreage was contingent upon SENGAI exercising its option on the first block of acreage. The option on the first block of acreage expired on February 8, 2002 without exercise.

Under the Option and Farmin Agreement, SENGAI committed to pay for all costs up to \$2,000,000 in a \$2,250,000 drilling program on the first block of acreage, starting in the fall of 2001. RMG had to pay the remaining \$250,000 for the drilling program (on its behalf and for Quaneco LLC, which completes RMG's drilling commitment to Quaneco; see below). SENGAI had to complete the drilling program regardless of whether it exercised the options. SENGAI completed this program in the fall of 2001.

As the first option was not exercised, all of the work paid for under the drilling program will benefit RMG (and now CCBM and Quaneco in their respective working interests), and SENGAI has no rights in the Castle Rock prospect or in any wells drilled on it.

The SENGAI drilling program neither established CBM reserves or condemned the drilled acreage as unproductive. RMG believes that SENGAI declined to exercise the option based on SENGAI's evaluation of incomplete data generated by SENGAI's drilling program, which SENGAI designed and executed. When SENGAI drilled the 19 exploratory wells under its option on the Castle Rock prospect, SENGAI did not utilize the best available procedures to detect possible CBM content. In addition, 6 of the wells were drilled in a pod configuration but 5 of the 6 were drilled into separate coal seams, even though efficient dewatering requires multiple close-spaced wells into the same coal. Eleven of the other SENGAI-drilled wells confirmed the presence of coal at the depths originally estimated by RMG, but otherwise insufficient data was generated by the drilling and testing of these 11 wells to determine if the coal might be productive of CBM.

RMG, Quaneco and SENGAI have signed a Project Completion Agreement, whereby Powder River Gas L.L.C. (an operating company owned equally by RMG and Quaneco) will become the operator of record for the Castle Rock properties and SENGAI's working interest will revert to 0% in the project. In addition, RMG has elected to accept a 93.75% working interest in (and RMG will operate) 8 completed wells in the Castle Rock area. CCBM has a 6.25% working interest in these 8 wells.

Although the data on the 8 wells to be retained by RMG is incomplete (which wells were drilled by SENGAI), RMG will further evaluate the data. If the results are favorable, RMG will start dewatering these wells and establish a pod grid to drill and complete and start dewatering more wells around each existing well to maximize dewatering efficiency. As with any CBM project, a substantial amount of dewatering of pods of wells into the same coal is necessary before the economics of the wells can be assessed. We have not prepared a budget or timetable for this future work but expect to do so by March 31, 2003. This future work would start in spring 2003, subject to having the necessary funds on hand.

Edgar Filing: US ENERGY CORP - Form 10-K/A

DESCRIPTION OF PROSPECTS

Leases of federal mineral rights are obtained from the United States Bureau of Land Management and expire from 2004 to 2009, unless RMG establishes production on the lease, in which event the lease is held so long as coalbed methane or other gas or oil is produced. A royalty interest of 12.5% on the production is paid to the BLM. State leases expire from 2003 to 2004 in Wyoming and Montana, unless RMG establishes production on the lease, in which event the lease is held so long as coalbed methane or other gas or oil is produced. The royalty paid to the State of Wyoming is from 12.5 % to 16.67%, and 12.5% to the State of Montana. Annual renewal fees for non-producing Federal leases is \$1.50 to \$2.00 per acre, and \$1.00 and \$1.50 for non-producing Wyoming and Montana leases.

An environmental group has filed a lawsuit against the BLM, RMG and others, challenging the validity of numerous BLM leases in the Powder River Basin of Montana. See Item 3, Legal Proceedings ("Rocky Mountain Gas Litigation").

Leases on private (fee) land for coalbed methane and conventional gas expire at various times from 2003 to 2011, unless production is established, in which event the lease is held so long as there is production. The landowner is paid a royalty from production of 12.5% to 20.0% , depending on the lease terms.

Table 3

ROCKY MOUNTAIN GAS, INC.

Prospect	Gross Leased Acres	Net Leased Acres	Net Leased from BLM	Net Leased from State of Wyoming	Net Lease from Stat Montana
Castle Rock	123,840	111,567	55,104	0	10,860
Kirby	80,254	74,512	33,305	0	4,056
Oyster Ridge*	21,536	21,536	17,107	1,229	0
Clearmont	6,305	3,745	0	640	0
Sussex	640	640	0	640	0
Finley	160	160	0	160	0

Arvada	1,900	1,700	1,200	0	0
Bobcat	1,940	1,940	0	0	0

*Does not include 43,711 acres under option from Anadarko Petroleum. See "Description of Properties - Oyster Ridge."

CASTLE ROCK: The Castle Rock project consists of 123,840 gross and 111,567 net acres located in the northeastern portion of the Powder River Basin of Montana, west of Broadus, Montana. Coals present are in the Tongue River member of the Fort Union formation and appear comparable to coals currently being developed by other operators south of the Castle Rock acreage near the Montana/Wyoming border. Currently, there are no pipelines in this area. The federal leases generally have 10-year terms and fee and state leases generally have two to five year terms.

KIRBY: The Kirby project consists of 80,254 gross and 74,512 net acres located in the northwestern portion of the Powder River Basin in Montana located in Big Horn and Rosebud Counties, Montana, north of Sheridan, Wyoming. Coals are in the lower portion of the tertiary Fort Union formation and are similar to productive coals in the Wyoming portion of the Powder River Basin to the south. Redstone (recently acquired by Montana Dakota Utilities) has established significant coalbed methane production 12 miles south of Kirby at the CX field. At least two other operators are currently planning to drill and develop nearby acreage. CMS's Bighorn Gas Gathering recently extended a new 20" pipeline to within 10 miles of the Kirby project. Three exploration wells are currently scheduled to be drilled at Kirby during the summer of 2002.

OYSTER RIDGE: The Oyster Ridge project consists of 65,247 gross and net acres located in southwestern Wyoming in the Ham's Fork Coal Field adjacent to the Green River Basin. RMG and CCBM have a 100% working interest (50% each) in 21,536 acres within Oyster Ridge.

Anadarko Petroleum, Inc. is successor to Union Pacific Land Resources Corporation, which sold the acreage subject to UPLRC's back in option to third parties, from whom RMG acquired the acreage in December 1999.

The agreement with Anadarko is a drill-to-earn-acreage agreement: we must drill at least four wells each year, each on a new section (640 acres), to earn a lease on each drilled section, and also to keep in force previously earned leases in the 43,711 acres areas. Wells drilled by our seller, and by us (with CCBM), have earned 3,200 acres, which are included in the 21,536 acres leased presently. As of March 31, 2002, we have met our drilling obligations for the year ended March 31, 2002. Under the terms of the agreement, we must drill 4 additional wells by March 31, 2003 to keep our agreement in force. RMG expects to meet this drilling commitment.

Within this prospect, 43,711 gross acres are subject to an option held by Anadarko Petroleum, Inc. to participate as a 25% working interest owner on all wells drilled each year. Anadarko has not yet elected to participate, and has no working interest in the seven wells drilled to date on this prospect. If Anadarko elects to participate in the future, working interest ownership in affected wells would be of 37.5% RMG, 37.5% CCBM, and 25% Anadarko.

The area is prospective for coalbed methane production from two primary Cretaceous age coals, the Frontier and the Adaville. The Kern River pipeline, which services southern California, crosses the property. Exploratory drilling and completion operations on previously drilled wells resumed at Oyster Ridge in June, 2001. To date, \$621,128 has been spent on 7 exploratory wells.

CLEARMONT: The Clearmont project consists of approximately 6,305 gross and 3,745 net acres located in the western Powder River Basin of Wyoming. RMG (and now CCBM jointly) owns working interests ranging from 25% to 100%. The area is characterized by several shallow Fort Union coalbeds (most notable the Roland and Anderson coals) as well as several deeper coals that hold significant exploration potential. Substantial coalbed methane production and development is ongoing in the immediate area including Federated's Box Elder Creek project 12 miles to the west and the Penneco/CMS Wild Horse Creek project 15 miles to the east. The Clearmont project is located at the convergence of the WBI Bitter Creek and the Bighorn Sheridan Lateral pipelines. An exploration drilling program began at Clearmont in August 2001 and could be in production in 2002 or

Edgar Filing: US ENERGY CORP - Form 10-K/A

early 2003 depending on drilling results and gas prices. To date, \$2,247,000 has been spent on drilling and infrastructure at Clearmont.

Nineteen of the existing 31 wells at Clearmont have been on full-scale dewatering since June 2002. These 19 wells are hooked up to a gas gathering system but no gas will be sold until the compressor is set up (see below). The remaining 12 wells will start dewatering and be hooked up to a gas gathering system in

15

2003. In addition, another 16 wells will be drilled and completed and put on dewater pumps; it is expected that this added 16 well project will be started in September 2002. We expect to have sufficient data to evaluate the economics of Clearmont in the second or third calendar quarter 2003.

During 2003, RMG expects to begin selling gas produced from the Clearmont wells to CMS Field Services, Inc. pursuant to a gas purchase contract. However, production could be delayed if dewatering hasn't progressed sufficiently to allow production of commercial amounts of gas. In the third calendar quarter 2002, RMG will complete construction of a field gathering system (for delivery and initial compression of the gas) to Bighorn Gas Gathering, LLC. Bighorn has signed a gas gathering agreement with RMG to deliver gas collected from RMG's system to CMS, and Bighorn expects to have its system built from Clearmont to a gas transmission pipeline in the fourth calendar quarter 2002.

SUSSEX: RMG and CCBM hold 640 gross and net acres in this project area located in Johnson County, Wyoming. This State lease lies 3 miles south of Sussex, Wyoming. RMG has a 100% working interest. To date, RMG has not conducted any significant exploration on the property.

FINLEY: RMG and CCBM hold 160 gross and net acres in this project area located in Converse County, Wyoming. This prospect is a State lease 12 miles east of Edgerton, Wyoming. Review for a two well test is underway. To date, RMG has not conducted any significant exploration on the property.

BAGGS NORTH: This prospect contains 120 gross and net acres located in Carbon County, Wyoming. This State lease is located 7 miles north of Baggs, Wyoming. RMG and CCBM hold a 100% working interest in this prospect. To date, RMG has not conducted any significant exploration on the property.

GILLETTE NORTH: RMG and CCBM holds a 100% working interest in 80 gross and net acres in this project area located in Campbell County, Wyoming. This State lease lies at the north end of the City of Gillette. Existing coalbed methane wells lay in the section immediately north. Permitting of two wells has begun on RMG's property. RMG intends to conduct test drilling and production techniques in this area which lies in the heart of the current coalbed methane play in the Gillette area. To date, RMG has not conducted any significant exploration on the property.

ARVADA: This prospect contains 1,900 gross acres, 1,700 net acres, located in Sheridan County, Wyoming. RMG and CCBM hold a 100% working interest, and a 62% to 81.5% net revenue interest. To date, RMG and CCBM have spent \$64,428 on the drilling of one 1,471' deep test well and are analyzing the drilling results. Subject to good results from further exploratory drilling, RMG anticipates constructing a field gathering system on the Arvada property in mid-calendar 2003 and begin production sales in the third calendar quarter 2003. Gas gathering and production sales are covered by agreements with Bighorn Gas

Edgar Filing: US ENERGY CORP - Form 10-K/A

Gathering, LLC and CMS Field Services, Inc.

COALBED METHANE WELL PERMITTING. Drilling coalbed methane wells requires obtaining permits from various governmental agencies. The ease of obtaining the necessary permits depends on the type of mineral ownership and the state in which the property is located. Intermittent delays in the permitting process can reasonably be expected throughout the development of any play. For example, there is currently a temporary moratorium for drilling coalbed methane wells on fee and state lands in Montana. We may shift our exploration and development strategy as needed to accommodate the permitting process. As with all governmental permit processes, there is no assurance that permits will be issued in a timely fashion or in a form consistent with our plan of operations.

The Northern Plains Resource Council, Inc. ("NPRC") settled its suit against the Montana Board of Oil and Gas Conservation (Board) in which the NPRC requested an order of the court compelling the

16

defendant to prepare a Draft Environmental Impact Statement ("EIS") and amendment of the Powder River and Billings Resource Management Plans for coalbed methane development. The Board agreed to limit issuance of CBM well permits to 200 (of which RMG received 79) pending completion of the draft EIS, which was completed in the summer of 2002. A record of decision is expected in December 2002 or early 2003.

The Wyoming Department of Environmental Quality Supplemental Environmental Impact Statement (SEIS) for the Powder River Basin in Wyoming, issued in the fall of 1999, allowed the permitting of 5,000 CBM wells to be drilled on Federal lands in Wyoming. More CBM well applications have been submitted causing the BLM to begin a second EIS for the Powder River Basin Area in Wyoming. The new draft EIS was completed in the summer of 2002. Exploration and development on Federal lands in Wyoming has been stopped with the balance of the Wyoming Department of Environmental Quality EIS permitted wells (4,000) occurring on fee and state lands. The BLM completed an environmental assessment ("EA") in March 2001, reviewing drainage issues, which could allow an additional 1,500 new CBM well permits in the Gillette region of the Powder River Basin. The EIS may impact RMG's operations, as the Arvada prospect is within the affected area, and we expect to begin applying for permits in these prospects in late 2002. A record of decision is expected in December 2002 or early 2003.

In addition, the Wyoming and Montana Departments of Environmental Quality have regulations applying to the surface disposal of water produced from CBM drilling operations. CBM operators are currently seeking changes in permit requirements and department policy that would allow operators more flexibility to discharge water on the surface. If these changes are not made, it may be necessary to install and operate treatment facilities or drill disposal wells to reinject the produced water back into the underground rock formations adjacent to the coal seams or lower sandstone horizons. If we cannot obtain the appropriate permits or if applicable laws or regulations require water to be disposed of in an alternative manner, the costs to dispose produced water will likely increase. These costs could have a material effect on operations in this area, including potentially rendering future exploration, development and production in the affected areas uneconomic.

RMG has received an Environmental Assessment and Finding of No Significant Impact to drill up to 56 shallow gas sand wells. These wells are located on Federal land held with Quaneco and would be converted to production status upon

Edgar Filing: US ENERGY CORP - Form 10-K/A

receiving approval from the Montana Board of Oil and Gas. These wells would evaluate potential CBM production as well as conventional gas. Regarding other acreage held with Quaneco in Montana, the State of Montana may lift its moratorium for CBM wells on private and state ground in Montana, and start issuing new permits on these lands in summer 2002 (a voluntary moratorium is currently in place for wells on private and state ground in Montana). We have not determined to what extent we will participate in this procedure, and are evaluating how best to protect our position to have reasonable exploration for CBM wells proceed on state and fee ground. We have permits in place in order to conduct exploration in expectation that commercial production will be approved on completion of the EIS.

In August 2001, Montana and Wyoming announced an agreement for water quality officials in both states to coordinate monitoring of water flows in the Powder River and Little Powder River drainages, to determine the impact of coalbed methane well water production on river water. Although usually well water is drinkable, it may contain high sodium absorption ratios, which can impair use of the water for irrigation purposes in clay-based soils. The respective agencies will propose regulations to establish thresholds for potential pollutants and require strict monitoring by local water quality officials. If test results indicate some well water flows adversely impact river water quality, operators could be required to put the water flow into holding ponds or take other steps to eliminate or reduce water flows or pollutants in the water. Implementation of the agreement may benefit continued coalbed methane exploration in these areas by opening up the water discharge permitting process in the affected areas, as water testing is completed in phases

17

on prospects within the affected drainage areas. Currently, we don't have acreage that would be impacted by these regulations but future acreage could be acquired in the affected areas.

The following summarizes permits now in place.

Table 4

Prospect	Remaining Permits	Expiration or Renewal Date
Castle Rock	15	04/17/2003 and 10/17/2002

Drilling permits issued by the State of Wyoming allow one year for drilling completion; permits issued by the State of Montana allow six months. Expired permits for undrilled locations are usually renewed by the agencies without difficulty.

Once drilled, all wells in the Clearmont and Arvada prospects remain (and future wells in Wyoming will be) subject to a National Pollution Discharge Elimination System ("NPDES") permit relating to water testing and discharge. All wells in the Castle Rock and Kirby prospects remain subject to the Montana Board of Oil and Gas Commission approval. Upon completion of drilling, wells are subject to monthly reporting regarding status and production to the respective state agencies in which they are located.

GATHERING AND TRANSMISSION OF CBM GAS

Companies involved in CBM production generally outsource their gas gathering, compression and transmission. We intend to outsource compression and gathering needs as well, possibly on a competitive basis with transmission companies in the immediate area. Negotiations with various transmission companies have been initiated in order to better manage future capital investment. To date, we have a gas gathering agreement and a separate gas purchase contract for the Clearmont and Arvada properties (see above).

Coalbed methane production growth in the Powder River Basin has historically been impeded by a shortage of gathering system capacity and transport capacity out of the Basin. However, two large diameter gathering pipelines were completed in September 1999 and a third was ready for service in early 2000. The two completed pipelines provide an additional 900 million cubic feet (MMcf), of daily gas capacity as set forth below:

Fort Union Gas Gathering, LLC's 106-mile, 24" gathering pipeline, commenced operations September 1, 1999, with an initial capacity of 450 MMcf per day; and

Thunder Creek Gas Services, LLC's 126-mile, 24" gathering pipeline, commenced operations September 1, 1999, with an initial capacity of 450 MMcf per day.

Additionally, CMS Energy's 110-mile, Big Horn Gas Gathering pipeline, that connects to the northern terminus of the Fort Union pipeline, is continuing to be expanded in length and has an initial capacity of 256

18

MMcf per day which can readily be upgraded to 500 MMcf per day with the addition of booster compression. Further, on June 19, 2000, Big Horn Gas Gathering announced the extension of its pipeline to serve producers in the Sheridan area. This 50+ mile extension will place a 20" high pressure pipeline within 5 miles of the Montana border and within close proximity to the development planned by RMG, CCBM, and Quaneco on their Kirby Prospect area.

Wyoming Interstate Gas Company's 143-mile, 24" Medicine Bow Lateral pipeline commenced operations in November 1999 with an initial capacity of 260 MMcf per day. This pipeline will transport natural gas from the Thunder Creek and Fort Union pipelines at the south end of the Powder River Basin to interconnect with multiple interstate pipelines accessing markets to the east and along the front range of Colorado. This system is already being expanded as demand for transportation space grows. Further transmission lines are being

Edgar Filing: US ENERGY CORP - Form 10-K/A

planned by other companies in the area.

Wyoming operators have been realizing lower than expected prices for gas produced in the Powder River Basin, due in part to seasonal/supply factors, but more significantly due to a bottleneck in take away capacity. There is now ample capacity to move gas from CBM fields within the PRB but limited interstate movement capacity from the PRB to the major markets on the coasts and in the midwest, which results in a negative price differential. The newly announced Grasslands Pipeline (to be constructed to move gas to midwest and northern markets) and the additional looping (now under construction) of the Kern River Pipeline, will add 1,000 MMcf daily PRB take away capacity when completed by the end of 2003, and should reduce the negative price differential.

For August, 2002, RMG received an average price of \$1.33 per Mcf (1,000 cubic feet) of gas produced from the Bobcat field (its only producing field at September 2002), with prices ranging from \$0.83 to \$1.79 per Mcf. This represents a negative price differential of approximately 60% compared to the average price of approximately \$3.30 per Mcf received by producers nationwide. While increased pipeline capacity planned or under construction is expected to reduce this negative price differential by the end of 2003, there is no guarantee that the increase will eliminate the negative price differential or even significantly reduce it. Continued low prices would impair our ability to raise capital for RMG and reduce revenues from production coming on line.

GENERAL INFORMATION ABOUT COALBED METHANE.

Methane is the primary commercial component of natural gas produced from conventional gas wells. Methane also exists in its natural state in coal seams. Natural gas produced from conventional wells generally contains other hydrocarbons in varying amounts which require the natural gas to be processed. Methane gas produced from coalbeds generally contains only methane and is pipeline-quality gas after simple water dehydration.

Coalbed methane production is similar to conventional natural gas production in terms of the physical producing facilities. However, the subsurface mechanisms that allow gas movement to the wellbore are very different. Conventional natural gas wells require a porous and permeable reservoir, hydrocarbon migration and a natural structural or stratigraphic trap. Coalbed methane gas is trapped (adsorbed) in the coal itself and in the water contained in the pore space, until released by pressure changes when the water in the coal is removed. In contrast to conventional gas wells, new coalbed methane wells initially produce water for several months. As the formation water pressure decreases, methane gas is released from the structure.

Methane production is a direct result of reducing the hydrostatic (water) pressure in the coal formation. Three principal stages are involved:

19

- o Drill wells (typically eight or more in a 'pod') down to the same coal formation, in contiguous 80 acre spacing per well; test the water in the formation and test coal samples taken from the formation. Water testing determines if the geochemical environment of the coal seam was conducive to the formation of CBM.
- o Install gathering lines to hook up and put wells on pump to 'dewater' the coal formation. Hydrostatic pressure must be reduced to about 50%

Edgar Filing: US ENERGY CORP - Form 10-K/A

of initial pressure before enough data is obtained (water flow rates, CBM gas flows) to determine how much CBM the wells may produce. This dewatering stage may take 6 to 18 months, and in some instances 24 months (where there is no dewatering of the coal seam occurring from wells drilled by others on adjacent properties).

- o Installing (or have a transmission company install) a compressor and transport line to carry produced gas to a gas transmission line for sale to end users. Gas production starts gradually then continues to grow in volume as hydrostatic pressure is reduced; optimal production won't occur until hydrostatic pressure is reduced approximately 90% from initial levels.

INACTIVE MINING PROPERTIES - URANIUM

GENERAL. We have interests in several uranium-bearing properties in Wyoming and Utah and in a uranium processing mill in southeastern Utah (the "Shootaring Mill" in Garfield County). All the uranium-bearing properties are in areas which produced significant amounts of uranium in the 1970s and 1980s. At some future date, we could develop and operate these properties (directly or through a subsidiary company or a joint venture) to produce uranium concentrates ("U3O8") for sale to public utilities that operate nuclear powered electricity generating plants. However, until uranium oxide prices improve significantly, all of the uranium properties are shut down, meaning work is performed to keep the mines from flooding and permitting work is done as needed (monitoring and reporting) to keep existing permits in effect.

The uranium properties have been shut down. Over a period of at least nine months, substantial and expensive work would be required to put the uranium properties into production, including cleaning rock and other debris from shafts and tunnels, pumping water out of the mines, extending the shafts and tunnels, and sampling to ascertain whether a commercially viable ore body exists on any of the properties.

However, a decision to put the uranium properties into production will have to take into account the fact that presently uranium oxide prices are lower than mining and milling costs. These low prices are primarily due to ample supplies of uranium being produced by other companies from lower cost (and higher grade) deposits outside the United States, and also to stockpiles of uranium oxide being sold off by those producers.

This low price situation has created conditions that have adversely impacted our ability to go into production. We cannot predict when uranium oxide prices might increase sufficiently to warrant putting our uranium properties into production. Such increases may not occur for several years, if at all.

At May 31, 2002 and 2001 (the dates of the consolidated balance sheets in this report), there are no values carried on the balance sheets for uranium properties.

SHEEP MOUNTAIN - WYOMING

Unpatented lode mining claims, underground and open pit uranium mines and mining equipment in the Crooks Gap area are located on Sheep Mountain in Fremont County, Wyoming and are adjacent to and west of the GMMV mining claims. From

Edgar Filing: US ENERGY CORP - Form 10-K/A

December 21, 1988 to June 1, 1998, these properties were held by Sheep Mountain Partners ("SMP"). On June 1, 1998, the Company received back from SMP all of the Sheep Mountain mineral properties and equipment, in partial settlement of disputes with Nukem, Inc. ("Nukem") and its subsidiary Cycle Resource Investment Corp. ("CRIC"). The judgment against Nukem impressing the CIS uranium supply contracts in constructive trust with SMP remains unresolved. See "Legal Proceedings." The Sheep Mountain Mines 1 and 2 were first operated by Western Nuclear, Inc., a subsidiary of Phelps Dodge Corporation, in the late 1970s.

We have recorded reclamation liabilities for the SMP properties (see note K to the consolidated financial statements in this report). All historical costs in the SMP properties were offset against a monetary award which was received from Nukem during fiscal 1999.

THE PROPERTY INTERESTS OF USE IN UTAH THROUGH PLATEAU RESOURCES LIMITED ("PLATEAU") ARE:

Plateau Resources Limited is a wholly-owned subsidiary of USE. See "Plateau Shootaring Canyon Mill" below.

The Tony M property contains underground uranium deposits in San Juan County, Utah, and are located partially on Utah State leases.

Plateau is the lessee of the Tony M property and has posted a bond securing Plateau's obligations to reclaim these properties. The Tony M property was originally developed by Plateau at the time Plateau was owned by Consumers Power Company ("CPC"), a Michigan public utility. Significant areas of uranium mineralization have been accessed and delineated by the prior owner's underground workings. When the Tony M property was in production (while Plateau was owned by CPC), it produced ore containing from three to eight pounds of uranium concentrates per ton. Some of this ore was processed at the Shootaring Mill. In addition, low grade uranium mineralization was stockpiled at the Tony M property and at the Shootaring Mill.

Plateau also acquired the Velvet property and the nearby Woods Complex in the Lisbon Valley area in southeastern Utah. The Velvet Mine was developed and permitted by its prior owner and is located approximately 178 miles by road from the Shootaring Mill. The prior owner drove several miles of access tunnels (adits) and drifts (access tunnels) and mined material from the workings. However, we cannot ascertain the amount or grade of material previously mined, nor have we ascertained by our own drilling the location and grade of remaining mineralized material in the mine. The Woods Complex was formerly an operating uranium mine with a remaining undeveloped resource. Access to this resource would be by extending a drift approximately 2,500 feet from the former Woods Mine. The Woods Mine property is not permitted, but we do not expect difficulty in obtaining a new permit, should we seek one, because the surface facilities would occupy the site that has been disturbed from previous operations.

THE GREEN MOUNTAIN MINING VENTURE ("GMMV") PROJECT

In fiscal 1991, we entered into an agreement to sell 50 percent of our interests in the Green Mountain uranium claims, and certain other rights, to Kennecott Uranium Company ("KUC" or "Kennecott"), a subsidiary of Kennecott Energy and Coal Company of Gillette, WY. Kennecott Energy and Coal Company is a subsidiary of Rio Tinto plc, formerly RTZ plc of London. In consideration of the sale to Kennecott, we received \$15,000,000 cash and a commitment by Kennecott to fund the first \$50,000,000 of GMMV expenditures under a joint venture agreement (the "GMMV Agreement") to mine and mill uranium ore and

Edgar Filing: US ENERGY CORP - Form 10-K/A

market uranium oxide. For detailed explanation, please see U.S. Energy Corp.'s 1999 Form 10-K at pages 8-11 and footnote F to the financial statements.

The GMMV holds 521 unpatented lode mining claims (the "Green Mountain Claims") on Green Mountain in Fremont County, Wyoming, including 105 claims on which the Round Park (Jackpot) uranium deposit is located, and the Sweetwater Mill, (approximately 23 miles south of Green Mountain).

In fiscal 2000, Kennecott filed a lawsuit to dissolve the GMMV and we counterclaimed for damages. This lawsuit was settled on September 11, 2000. Kennecott paid USECC \$3,250,000 to acquire all of our (and Crested's and USECC's) interest in the GMMV, its properties and the Sweetwater Uranium Mill (with certain exceptions), and all parties' claims in the lawsuit have been dismissed. Kennecott also assumed all reclamation and other liabilities associated with the GMMV, its properties, the Sweetwater Mill and all liabilities associated with the GMMV since its inception, including the historical liabilities associated with the Sweetwater Mill prior to its acquisition by the GMMV. We and Crested together have retained a 4% net profits royalty in any future uranium oxide produced from the GMMV mining claims through the Sweetwater Mill (currently shut down and not operational).

No reclamation liabilities are recorded on our balance sheet for the GMMV properties because they are solely Kennecott's responsibility (Kennecott assumed all those liabilities when we settled litigation with Kennecott in September 2000 (see "GMMV" below and note K to the consolidated financial statements)).

When Kennecott has completed necessary reclamation work on the Green Mountain unpatented lode mining claims (including the Round Park uranium deposit proposed to be mined through the Jackpot Mine) Kennecott will quit claim all such mining claims to us and Crested, as well as certain equipment currently being used at the mine (including a compressor and standby generator). Kennecott plans to keep the Sweetwater Mill.

PLATEAU'S SHOOTARING CANYON MILL AND PROPERTIES

ACQUISITION OF PLATEAU RESOURCES LIMITED ("PLATEAU"). In August 1993, USE purchased from Consumers Power Company ("CPC"), all of the outstanding stock of Plateau which owns the Shootaring Canyon uranium processing mill and support facilities in southeastern Utah (the "Shootaring Mill") for a nominal cash consideration. The Shootaring Mill holds a source materials license from the NRC. In the purchase of the stock from CPC, we agreed to various obligations, as disclosed in USE's 1998 Form 10-K at pages 15 and 16.

SHOOTARING MILL AND FACILITIES. The Shootaring Mill is located in southeastern Utah and occupies 19 acres of a 265 acre plant site. The mill was designed to process 750 tpd, but only operated on a trial basis for two months in mid-summer of 1982. In 1984, Plateau placed the mill on standby because CPC had canceled the construction of an additional nuclear energy plant.

Plateau also owns approximately 90,000 tons of uranium mineralized material stockpiled at the mill site and approximately 172,000 tons of mineralized material stockpiled at the Tony M property. Included with mill assets are tailings cells, laboratory facilities, equipment shop and inventory. The NRC issued a license to Plateau authorizing production of uranium concentrates, however, since the mill was shut down, only maintenance and required safety and environmental inspection activities were performed and the source materials license with the NRC was for standby operations only. Plateau applied to the NRC to convert the source materials license from standby to operational and upon increasing the reclamation bond, the NRC issued the new license on May 2, 1997.

Edgar Filing: US ENERGY CORP - Form 10-K/A

Plateau has a cash bond in favor of the NRC in the amount of \$8,818,600 plus and additional \$1,082,300 in government securities for bonding future reclamation.

22

Plateau obtained approval of a water control permit for the tailings cell from the Utah Water Control Division and is awaiting the NRC's review of the operating license conditions so Plateau can continue with construction of tailing facilities if it so desires.

The Shootaring Mill has remained shut down because of continued low uranium prices. Substantial expense would be incurred to upgrade the mill to operating status and fully activate the NRC permit, and substantial work would be needed to put the Velvet and Woods Complex properties into production for material to run through this mill. This work would include cleaning out adits and drifts, dewatering, and sampling to ascertain the location and grade of mineralized material.

TICABOO TOWNSITE

Plateau owns Canyon Homesteads, Inc., a Utah corporation, which developed the Ticaboo, Utah townsite 3.5 miles south of the Shootaring Mill. The townsite includes a motel, restaurant, lounge, convenience store and single family, mobile home and recreational vehicle sites (all with utility access), located on a State of Utah lease near Lake Powell. An amendment was entered into on April 1, 1997 on the Utah State lease covering the Ticaboo Townsite whereby the State will convey portions of the Townsite lease to Canyon on a sliding scale basis as they are sold. USE and Crested are developing the Townsite in limited fashion and are selling home and mobile home sites.

SHEEP MOUNTAIN PARTNERS ("SMP")

SMP PARTNERSHIP. In February 1988, USE acquired uranium mines, mining equipment and mineralized properties (Sheep Mountain Mines) at Crooks Gap in south-central Fremont County, Wyoming, from Western Nuclear, Inc. These Crooks Gap mining properties are adjacent to the Green Mountain uranium properties. USECC mined and milled uranium ore from one of the underground Sheep Mines during fiscal 1988 and 1989. In December 1988, USECC sold 50 percent of the interests in the Crooks Gap properties to Nukem's subsidiary Cycle Resource Investment Corporation ("CRIC") for cash. The parties thereafter contributed the properties to and formed Sheep Mountain Partners ("SMP"), in which USECC received an undivided 50 percent interest. SMP is a Colorado general partnership formed on December 21, 1988, between USECC and Nukem, Inc. then of Stamford, CT ("Nukem") through its wholly-owned subsidiary CRIC.

SMP was directed by a management committee, with three members appointed by USECC and three members appointed by Nukem/CRIC. The committee has not met since 1991 as a result of the SMP arbitration/litigation. During fiscal 1991, disputes arose between the SMP partners which resulted in litigation. See Item 3, Legal Proceedings.

PROPERTIES. USE, Crested and/or USECC own 98 unpatented lode mining claims and a 644 acre Wyoming State Mineral Lease in the Crooks Gap area.

An ion exchange plant located on the properties (to remove natural soluble uranium from mine water) was reclaimed and the plant disposed of at the Sweetwater Mill impoundment facility in fiscal 2002.

Edgar Filing: US ENERGY CORP - Form 10-K/A

Permits to operate existing mines (now shut down) on the Crooks Gap properties have been issued by the State of Wyoming. Amendments are needed to open new mines within the permit area. As a condition to issuance of the permits, a NPDES water discharge permit under the Clean Water Act has been obtained. Monitoring and treatment of water removed from the mines and discharged in nearby Crooks Creek is generally required. During the past two years, USECC did not discharge wastewater into Crooks Creek, and the mine water is presently being discharged into the USECC McIntosh Pit.

23

URANIUM MARKET INFORMATION.

URANIUM SPOT MARKET. Uranium exchange value spot price as reported by Tradetech was \$9.85/lb. U3O8 on July 31, 2002, an increase from an unrestricted value of \$7.95/lb U3O8 and restricted value of \$8.95/ U3O8 at July 31, 2001. During the first half of 2002, total spot market volume was approximately 8.4 million lbs. U3O8 which was 3.8 million lbs. for the first half of 2001, or an increase of 4.5 million lbs. U3O8.

URANIUM LONG-TERM MARKET. The long-term market has been active in 2002 with the long-term contracts reported by market analysts to have exceeded 10.9 million pounds of U3O8 during the first half of 2002. The uranium price indicator published by Tradetech was at \$10.75 per pound U3O8 at July 31, 2002, up from the \$10.00/lb. at July 31, 2001.

GOLD

SUTTER PROPERTY (CALIFORNIA)

SUTTER GOLD MINING COMPANY. In fiscal 1991, USE acquired an interest in Sutter properties located in the Mother Lode Mining District of Amador County, California. The entire Lincoln Project (which is the name we use for the properties) is owned by Sutter Gold Mining Company, a Wyoming corporation ("SGMC"), and a majority-owned subsidiary of USE.

This property has never been in production. Persistent low prices for gold have made financing difficult, and in fiscal 1999 resulted in a substantial write down of the SGMC properties.

Due to the depressed gold prices in the past and lack of available funding, SGMC has deferred the start of construction of a gold mill complex and extension of existing underground workings. A tourist visitors center has been set up (see below) and leased to a third party for \$1,500 per month plus a 4% gross royalty on revenues. There is one caretaker employee at the Sutter operation. Except for limited infrastructure improvements in 2000, the properties are shut down so far as possible mining operations are concerned. The exploration permits are being kept current as necessary to allow for possible mining activities on the properties in the future.

In 1998 and 1999 the company took impairments (write-downs) in the amounts of \$1,500,000 and \$10,718,800, respectively, of the carrying value of the gold properties. These two impairments wrote off almost 85% of our investment in these properties. As a result of low market prices for gold, we determined that we could not produce gold from these properties at a profit. The impairments taken in 1998 and 1999 resulted in no value for mine exploration, and the remaining assets relating to this property include raw land which is no longer

Edgar Filing: US ENERGY CORP - Form 10-K/A

needed for mining activity, and buildings and equipment.

We have not obtained a final feasibility study to support a determination that the Sutter property contains proven or probable reserves of gold.

PROPERTIES. SGMC holds approximately 216 acres of surface and mineral rights (owned), 54 acres of surface rights (owned), 55 acres of surface rights (leased), 154 acres of mineral rights (leased), and 366 acres of mineral rights (owned), all on patented mining claims near Sutter Creek, Amador County, California. The properties are located in the western Sierra Nevada Mountains at from 1,000 to 1,500 feet in elevation; year round climate is temperate. Access is by California State Highway 16 from Sacramento to California State Highway 49, then by paved county road approximately .4 mile outside of Sutter Creek.

24

Surface and mineral rights holding costs will be approximately \$90,000 from June 1, 2002 through May 31, 2003. Property taxes for fiscal 2003 are estimated to be \$20,000.

The leases are for varying terms, and require rental fees, advance production royalties, real property taxes and insurance.

PERMITS. The Amador County Board of Supervisors has issued a Conditional Use Permit ("CUP") allowing mining of the SGM and milling of production, subject to conditions relating to land use, environmental and public safety issues, road construction and improvement, and site reclamation.

VISITORS CENTER. In fiscal 2000, SGMC spent approximately \$298,000 for surface infrastructure related to improving access to the mine site, and to a lesser extent tourist related improvements. The visitors center is being operated by a third party. The visitors center is an exhibit of the pictures and memorabilia from mining operations on other properties in the Sutter district in the nineteenth century, and a guided tour of the underground workings at the Lincoln Project. Revenues from this tourist operation were \$41,200 and \$105,400 in fiscal 2002 and 2001, respectively, and are included in "motel, real estate and airport operations" in the consolidated statements of operations included in this report. These revenues offset a majority of costs for holding the Sutter properties.

MOLYBDENUM

As a holder of royalty, reversionary and certain other interests in properties located at Mt. Emmons near Crested Butte, Colorado, USE and Crested are entitled to receive annual advance royalties of 50,000 pounds of molybdenum, or cash equivalent. AMAX Inc. (which was acquired by Cyprus Minerals Company and was renamed Cyprus Amax Minerals Company in November 1993 and was acquired later by Phelps Dodge) delineated a deposit of molybdenum containing approximately 146,000,000 tons of mineralization averaging 0.43% molybdenum disulfide on the properties of USE and Crested.

Advance royalties are paid in equal quarterly installments until: (i) commencement of production; (ii) failure to obtain certain licenses, permits, etc., that are required for production; or (iii) AMAX's return of the properties to USE and Crested. The advance royalty payments reduce the operating royalties (6% of gross production proceeds) which would otherwise be due out of production. There is no obligation to repay the advance royalties if the

Edgar Filing: US ENERGY CORP - Form 10-K/A

property is not placed in production. USE recognized \$108,500 and \$132,600 of revenues in fiscal 2001 and 2000 related to this royalty interest. Phelps Dodge ceased making the quarterly installments in July 2001.

The Agreement with AMAX also provides that USE and Crested receive \$2,000,000 if the Mt. Emmons properties are put into production and, in the event AMAX sells its subsidiary, Mt. Emmons Mining Company, or its interest in the molybdenum properties, USE and Crested are to receive 15% of the first \$25,000,000 received by AMAX.

AMAX Inc. and its successor companies have sought to put the Mt. Emmons molybdenum property into production for 20 years. Due to local opposition to mining (the property is close to the Crested Butte, Colorado recreational resort area) and AMAX's successors' failure to diligently pursue obtaining the permits needed to start mining, we know of no plans at this time to put the property into production.

USE and Crested are in litigation with Phelps Dodge concerning the Agreement and the properties, see "Item 3 - Legal Proceedings."

25

OIL AND GAS

FORT PECK LUSTRE FIELD (MONTANA). We operate a small oil production facility (three wells) at the Lustre Oil Field on the Ft. Peck Indian Reservation in northeastern Montana. We receive a fee based on oil produced. This fee and other assets of the Company collateralize a \$750,000 line of credit from a bank.

MOTEL, REAL ESTATE AND AIRPORT OPERATIONS

WYOMING. We own varying interests, alone and with Crested, in affiliated companies engaged in real estate, and other commercial businesses. Activities of these and other subsidiaries include ownership and management of a commercial office building, the townsite of Jeffrey City, Wyoming (which has been sold), and the townsite, motel, convenience store and other commercial facilities in Ticaboo, Utah.

The Company and Crested own a 14-acre tract in Riverton, Wyoming, with a two-story 30,400 square foot office building (including underground parking). The first floor is rented to affiliates, nonaffiliates and government agencies; the second floor is occupied by the Company and Crested. The property is mortgaged to the WDEQ as security for future reclamation work on the Sheep Mountain Crooks Gap uranium properties.

The Company and Crested also own a fixed base aircraft facility at the Riverton Regional Airport, including a 10,000 square foot aircraft hangar and 7,000 square feet of associated offices and facilities. This facility is on land leased from the City of Riverton for a term ending December 16, 2005, with an option to renew on mutually agreeable terms for five years. The operation for services to the public was shut down late in fiscal 2002.

The Company and Crested also own 17 semi-developed lots on 26.8 acres and 63 acres of undeveloped land near the Riverton Regional Airport, and three mountain sites covering 16 acres in Fremont County, Wyoming. Also in Riverton, Wyoming, the Company owns four city lots and a 9-acre tract with improvements

Edgar Filing: US ENERGY CORP - Form 10-K/A

including two smaller office buildings and two other buildings with 12,000 square feet of office facilities, and repair and maintenance shops containing 8,000 square feet.

COLORADO. USECC owns 182 acres of undeveloped land in and near Gunnison, Colorado.

UTAH. Canyon Homesteads, Inc. (a Plateau subsidiary) owns a majority interest in a joint venture which holds the Ticaboo Townsite in Ticaboo, Utah (see "Minerals - Uranium-Shootaring Canyon Mill - Ticaboo Townsite" above). In fiscal 1995, USE acquired the minority interest in the joint venture from a nonaffiliate.

The motel, real estate and airport operations are not dependent upon a single customer, or a few customers, the loss of which would have a materially adverse effect on the Company.

RESEARCH AND DEVELOPMENT

No research and development expenditures have been incurred, either on the Company's account or sponsored by customers, during the past three fiscal years.

ENVIRONMENTAL

GENERAL. Operations are subject to various federal, state and local laws and regulations regarding the discharge of materials into the environment or otherwise relating to the protection of the environment, including the Clean Air Act, the Clean Water Act, the Resource Conservation and Recovery Act ("RCRA"),

26

and the Comprehensive Environmental Response Compensation Liability Act ("CERCLA"). With respect to mining operations conducted in Wyoming, Wyoming's mine permitting statutes, Abandoned Mine Reclamation Act and industrial development and siting laws and regulations also impact us. Similar laws and regulations in California affect SGMC operations and Utah laws and regulations effect Plateau's operations.

Management believes the Company complies in all material respects with existing environmental regulations.

As of May 31, 2002, we have recorded estimated reclamation obligations of \$8,906,800. We anticipate that the reclamation efforts may not be required to be started for many years, and that when started, paying for those reclamation efforts will occur over several years. For further information on the approximate reclamation costs (decommissioning, decontamination and other reclamation efforts for which we are primarily responsible or potentially responsible), see note K to the consolidated financial statements included with this report.

OTHER ENVIRONMENTAL COSTS. Actual costs for compliance with environmental laws may vary considerably from estimates, depending upon such factors as changes in environmental laws and regulation (e.g., the new Clean Air Act), and conditions encountered in minerals exploration and mining. USE does not anticipate that expenditures to comply with laws regulating the discharge of materials into the environment, or which are otherwise designed to protect the environment, will have any substantial adverse impact on the competitive position of the Company.

Edgar Filing: US ENERGY CORP - Form 10-K/A

EMPLOYEES

USE has approximately 33 full-time employees, down from 55 in July 2001. Crested uses approximately 50 percent of the time of USE employees, and reimburses USE on a cost reimbursement basis.

MINING CLAIM HOLDINGS

TITLE. Nearly all the uranium mining properties held by the GMMV, USE, USECC and Plateau are on federal unpatented claims. Unpatented claims are located upon federal public land pursuant to procedure established by the General Mining Law. Requirements for the location of a valid mining claim on public land depend on the type of claim being staked, but generally include discovery of valuable minerals, erecting a discovery monument and posting thereon a location notice, marking the boundaries of the claim with monuments, and filing a certificate of location with the county in which the claim is located and with the BLM. If the statutes and regulations for the location of a mining claim are complied with, the locator obtains a valid possessory right to the contained minerals. To preserve an otherwise valid claim, a claimant must also pay certain rental fees annually to the federal government (currently \$100 per claim) and make certain additional filings with the county and the BLM. Failure to pay such fees or make the required filings may render the mining claim void or voidable. Because mining claims are self-initiated and self-maintained, they possess some unique vulnerabilities not associated with other types of property interests. It is impossible to ascertain the validity of unpatented mining claims solely from public real estate records and it can be difficult or impossible to confirm that all of the requisite steps have been followed for location and maintenance of a claim. If the validity of an unpatented mining claim is challenged by the government, the claimant has the burden of proving the present economic feasibility of mining minerals located thereon. Thus, it is conceivable that during times of falling metal prices, claims which were valid when located could become invalid if challenged.

27

RMG's properties and mineral leases of BLM, state and fee lands require annual cash payments of approximately \$286,300 during fiscal 2003. RMG is obligated for \$96,400 of this amount to keep the leases in effect.

PROPOSED FEDERAL LEGISLATION. The U.S. Congress has, in legislative sessions in recent years, actively considered several proposals for major revision of the General Mining Law, which governs mining claims and related activities on federal public lands. If any of the recent proposals become law, it could result in the imposition of a royalty upon production of minerals from federal lands and new requirements for mined land reclamation and other environmental control measures. It remains unclear whether the current Congress will pass such legislation and, if passed, the extent such new legislation will affect existing mining claims and operations. The effect of any revision of the General Mining Law on operations cannot be determined conclusively until such revision is enacted; however, such legislation could materially increase the carrying costs of mineral properties which are located on federal unpatented mining claims, and could increase both the capital and operating costs for such projects and impair the ability to hold or develop such properties.

ITEM 3. LEGAL PROCEEDINGS

Edgar Filing: US ENERGY CORP - Form 10-K/A

Material pending proceedings are summarized below. Other proceedings which were pending in fiscal 2002 have been settled or otherwise finally resolved.

SHEEP MOUNTAIN PARTNERS ARBITRATION/LITIGATION

In 1991, disputes arose between USE/Crested, and Nukem, Inc. and its subsidiary Cycle Resource Investment Corp. ("CRIC"), concerning the formation and operation of the Sheep Mountain Partners partnership for uranium mining and marketing, and activities of the parties outside SMP. Arbitration proceedings were initiated by CRIC in June 1991 and in July 1991, USECC filed a lawsuit against Nukem, CRIC and others in the U.S. District Court (District of Colorado) in Civil No. 91B1153. Later, USECC filed another suit for the standby costs at the SMP mines against SMP in the Colorado State Court. The Federal Court stayed both the arbitration proceedings and the State Court case. In February 1994, all of the parties agreed to exclusive and binding arbitration of the disputes before the American Arbitration Association ("AAA"), for which the legal claims made by both sides included fraud and misrepresentation, breach of contract, breach of duties owed to the SMP partnership, and other claims.

The AAA panel (the "Panel") entered an Order and Award (the "Order") in April 1996 and clarified the Order on July 3, 1996, finding generally in favor of USE and Crested on certain of their claims (including the claims for reimbursement for standby maintenance expenses and profits denied SMP in Nukem's trading of uranium), and in favor of Nukem/CRIC and against USE and Crested on certain other claims, and imposing a constructive trust in favor of Sheep Mountain Partners on uranium contracts Nukem entered into to purchase uranium from CIS republics. USECC filed a petition for confirmation of the Order and on June 30, 1997, and the U.S. District Court confirmed the Order in its Second Amended Judgment (the "Judgment"). Thereafter, Nukem/CRIC appealed the Judgment to the 10th Circuit Court of Appeals ("CCA").

A three judge panel of the 10th CCA issued an Order and Judgment on October 22, 1998, which unanimously affirmed the Federal District Court's Second Amended Judgment without modification. The ruling affirmed (i) the imposition of a constructive trust in favor of SMP on Nukem's rights to purchase CIS uranium, the uranium acquired pursuant to those rights, and the profits therefrom; and (ii) the damage award against Nukem/CRIC. As a result of the ruling of the 10th CCA, USE and Crested received an additional \$6,077,264 (including interest and court costs) from Nukem in February 1999 for a total net monetary award of \$15,468,625 in the arbitration/litigation, and equitable relief in the form of USE's and Crested's interest in SMP, which holds the constructive trust over the CIS contracts. Nukem/CRIC filed two motions for entry of final satisfaction of Judgment. The U.S. District Court denied both motions, Nukem again appealed to the

28

10th CCA, which again affirmed the District Court's ruling, and held that Nukem/CRIC had not demonstrated that the Judgment had been satisfied because they had not provided USECC with an accounting of the partnerships assets.

In February 2001, the U.S. District Court appointed a Special Master to determine the amounts, if any, owed by Nukem to SMP pursuant to the constructive trust. The Special Master has ordered an accounting to identify all deliveries of CIS uranium made directly or indirectly to Nukem and any Nukem affiliates; to identify the ultimate disposition of all uranium purchased under the CIS contracts; to identify the location, number of pounds, and associated cost of uranium purchased under the CIS contracts at December 31, 2001, and to calculate

Edgar Filing: US ENERGY CORP - Form 10-K/A

the profits realized from the sale of CIS uranium. At a status hearing held before the U.S. District Court on August 23, 2002, the Court ordered the Special Master to file his report on or before December 6, 2002 and a further hearing to schedule arguments will be held on December 13, 2002.

CONTOUR DEVELOPMENT LITIGATION

On July 28, 1998, USE filed a lawsuit in the United States District Court, Denver, Colorado, Case No. 98WM1630, against Contour Development Company, L.L.C. and entities and persons associated with Contour Development Company, L.L.C. (together, "Contour") seeking compensatory and consequential damages of more than \$1.3 million from the defendants for dealings in real estate owned by USE and Crested in Gunnison, Colorado. The Contour defendants asserted a counterclaim asking for payment of attorneys fee and costs. The matter has been settled, with USE receiving \$25,000 cash and unencumbered title to two commercial real estate lots covering seven acres in Gunnison, Colorado, and unencumbered title to five development lots covering 175 acres north of Gunnison, Colorado.

See "Business - Commercial Operations - Real Estate and Other Commercial Operations - Colorado Properties" above.

PHELPS DODGE LITIGATION

U.S. Energy Corp. and its majority-owned subsidiary, Crested Corp., d/b/a USECC, were served with a lawsuit on June 19, 2002, filed in the U.S. District Court of Colorado (Case No. 02-B-0796(PAC)) by Phelps Dodge Corporation and its subsidiary, Mt. Emmons Mining Company (MEMCO), over contractual obligations from USECC's agreement with Phelps Dodge's predecessor companies, concerning a mining property in Colorado.

The litigation stems from agreements that date back to 1974 when U.S. Energy and Crested Corp. leased mining claims on Mt. Emmons near Crested Butte, Colorado to AMAX Inc., Phelps Dodge's predecessor company. The claims cover one of the world's largest and richest deposits of molybdenum. AMAX reportedly spent over \$200 million on the acquisition, exploration and mine planning activities on the Mt. Emmons properties. In counter and cross-claims filed in the U.S. District Court of Colorado, USECC contends that Phelps Dodge and its subsidiaries committed several breaches of contracts related to the agreements, including breach of fiduciary obligations and covenants of good faith and fair dealing. USECC also contends Phelps Dodge is guilty of violating federal and state antitrust laws when it purchased Cyprus Amax Minerals Company (Cyprus Amax).

The complaint filed by Phelps Dodge and MEMCO seeks a determination that Phelps Dodge's acquisition of Cyprus Amax was not a sale. Under a 1986 agreement between USECC and AMAX, if AMAX sold MEMCO or its interest in the mining properties, U.S. Energy and Crested would receive 15% (7.5% each) of the first \$25 million of the purchase price (\$3.75 million). In 1991, Cyprus Minerals Company acquired AMAX to form Cyprus Amax Minerals Co. USECC's counter and cross-claims allege that in 1999, Phelps Dodge formed a wholly-owned subsidiary CAV Corporation, for the purpose of purchasing the

controlling interest of Cyprus Amax and its subsidiaries (including MEMCO) at an estimated value in cash and Phelps Dodge stock exceeding \$1 billion and making Cyprus Amax a subsidiary of Phelps Dodge. Therefore, USECC asserts the

Edgar Filing: US ENERGY CORP - Form 10-K/A

acquisition of Cyprus Amax by Phelps Dodge was a sale of MEMCO and the properties that triggers the obligation of Cyprus Amax to pay USECC the \$3.75 million plus interest.

A second counterclaim by USECC rejects the claim by Phelps Dodge that it and its predecessors, Cyprus Amax and AMAX Inc., had mistakenly paid royalties to USECC since January 1991. In 1984, AMAX began paying the cash equivalent (half each to U.S. Energy and Crested Corp.) of 700,000 pounds of molybdenum per year as an advance royalty prior to the mine beginning production. In 1986, USECC agreed to assist financially troubled AMAX and substantially reduced the annual advance royalty to 50,000 pounds of molybdenum, so that AMAX could continue to hold the properties and eventually bring them into production. AMAX, Cyprus Amax and Phelps Dodge continued paying the annual advance royalties to U.S. Energy and Crested Corp. until the payment due in July 2001, when Phelps Dodge unilaterally ceased making the payments. Phelps Dodge and MEMCO seek a declaratory judgment that the advance royalty payment obligation has terminated, and further, that USECC should repay \$948,109 of royalties paid to USECC from 1993 through 2000, because those payments were made by mistake.

The third issue in the litigation is whether USECC must, under terms of a 1987 royalty deed, accept Phelps Dodge's and MEMCO's forth-coming conveyance of the Mt. Emmons properties back to USECC, which properties now include a plant to treat mine water, costing in excess of \$1 million a year to operate in compliance with State of Colorado regulations. Phelps Dodge's and MEMCO's threatened reconveyance would require USECC to assume the operating costs of the water treatment plant. USECC refuses to have the water treatment plant included in the return of the properties because, the USECC counterclaim argues, the properties must be in the same condition as when they were acquired by AMAX before the water treatment plant was constructed by AMAX.

The properties are comprised of 10 unpatented lode mining claims (for which patents are expected to be issued by the BLM in the near future), and 770 unpatented lode mining claims, for a total of 15,600 acres.

As added counterclaims, USECC seeks (i) damages for defendants' breach of covenants of good faith and fair dealing; (ii) damages for defendants' failure to develop the Mt. Emmons properties and not protecting USECC's rights as revisionary owner of the mining rights to the properties, (iii) damages for unjust enrichment of defendants; (iv) damages for breach of the defendants' fiduciary duties owed to USECC as revisionary owner of the property, and for neglecting to maintain the mining rights and interests in the properties; and (v) damages relating to defendants' actions in violation of federal and Colorado anti-trust and constraint of trade laws.

USECC also seeks a declaratory judgment of its rights and liabilities under the agreements affecting the Mt. Emmons properties; an injunction against defendants prohibiting the conveyance of the properties to USECC with the water treatment plan; an injunction against further waste of the properties by the defendants; an injunction requiring defendants to divest their molybdenum holdings (including the Mt. Emmons properties); and an injunction requiring defendants to assist USECC in mining molybdenum from the Mt. Emmons properties.

On August 2, 2002, Phelps Dodge and MEMCO filed a reply to the counterclaims of USECC and Cyprus Amax filed an answer to the counterclaims and third party complaint of USECC, generally denying the allegations of USECC. CAV Corporation filed a motion for summary judgment seeking dismissal of USECC's cross complaint and is pending. An order has been entered by the Court setting the Scheduling/Planning Conference in the case for September 12, 2002.

Edgar Filing: US ENERGY CORP - Form 10-K/A

Except for the parties' claims regarding payment of the \$3.75 million due on the sale of MEMCO, payments of royalties, and responsibility going forward for payment of the operating costs of the water treatment plan, the financial impact to U.S. Energy Corp. and Crested Corp. of favorable or unfavorable outcomes in the litigation presently is not determinable.

SUTTER PROPERTY LITIGATION

On or about March 13, 2002, the Company's subsidiary, Sutter Gold Mining Company ("SGMC"), was served with a complaint filed in the Superior Court of Amador County, California, Case Number 02CU2051. The plaintiff is Edward A. Swift individually and as a trustee and the other defendant is Meridian Minerals Company (Meridian). The litigation involves a mining lease entered into in 1989 between Plaintiffs and Defendant Meridian on the rental of Plaintiffs' land. Plaintiffs contend Defendants owe them \$136,186 for past due rent and some \$12,000 in unpaid taxes and for fence repair. Defendant SGMC, has filed an answer generally denying the complaint and the case is pending. We have negotiated the terms of a settlement but due to the death of one of the essential parties in the matter, finalization of the settlement has been delayed. We hope to finalize a settlement in calendar 2002.

ROCKY MOUNTAIN GAS LITIGATION

On or about April 1, 2002, the Company's subsidiary, Rocky Mountain Gas, Inc. ("RMG") was served with a Second Amended Complaint wherein the Northern Plains Resource Council had filed suit in the U.S. District Court of Montana, Billings Division in Case No. CV-01-96-BLG-RWA, against the United States Bureau of Land Management ("BLM"), RMG and certain of its affiliates (including U.S. Energy Corp. and Crested Corp.), and joined some 20 other defendants. The plaintiff is seeking to cancel oil and gas leases issued to RMG et al by the BLM in the Powder River Basin of Montana and for other relief. RMG and its affiliates have not yet answered or otherwise pled to the complaint.

The basis for the complaint appears to be that the BLM's regulations require the BLM to respond to objections filed by persons owning land or lease rights adjacent to the coalbed properties which the BLM is offering to lease to the public. The argument of plaintiff appears to be that if objections are not responded to by the BLM prior to issuing CBM leases, the leases are invalid. Based on this argument, the plaintiff appears to have been successful in forcing cancellation of some CBM leases granted to others in the Powder River Basin of Montana, because the BLM did not respond to some objecting adjacent landowners. However, all of the BLM leases in Montana held by RMG (none are held by U.S. Energy Corp. or Crested Corp. in their own corporate names) are at least four years old, and there is no record of any objections being made to the issue of those leases.

Based on filings in the case to date, it appears that the BLM is taking the initiative in responding to the plaintiff. We believe RMG's leases were validly issued in compliance with BLM procedures, and do not believe the plaintiff's lawsuit will adversely affect any of RMG's Montana BLM leases. However, RMG holds BLM leases on 88,411 gross acres in Montana (in the Castle Rock and Kirby prospects), which equals 31.5% of RMG's total coalbed methane leases. An adverse court ruling to the effect that all or a substantial portion of the BLM leases in Montana are invalid could materially and adversely impact RMG. No trial date has been set.

ITEM 4. SUBMISSION OF MATTERS TO A VOTE OF SECURITY HOLDERS

Edgar Filing: US ENERGY CORP - Form 10-K/A

Not applicable.

31

PART II

ITEM 5. MARKET FOR COMMON SHARES AND RELATED STOCKHOLDER MATTERS

(a) Market Information

Shares of USE common stock are traded on the over-the-counter market, and prices are reported on a "last sale" basis by the National Market System ("NMS") of the National Association of Securities Dealers Automated Quotation System ("Nasdaq"). The range by quarter of high and low sales prices is set forth below for fiscal 2002 and 2001.

	High ----	Low ---
Fiscal year ended May 31, 2002 -----		
First quarter ended 8/31/01	\$ 6.05	\$ 3.56
Second quarter ended 11/30/01	4.15	3.09
Third quarter ended 2/29/02	5.27	3.50
Fourth quarter ended 5/31/02	4.30	3.29
Fiscal year to ended May 31, 2001 -----		
First quarter ended 8/31/00	\$ 3.00	\$ 1.75
Second quarter ended 11/30/00	3.38	1.75
Third quarter ended 2/28/01	4.00	2.00
Fourth quarter ended 5/31/01	6.25	3.56

(b) Holders

(1) At August 15, 2002, the closing market price was \$3.05 per share and there were approximately 714 shareholders of record. As of August 26, 2002, we have 12,075,493 shares of common stock issued and outstanding, including shares owned by our subsidiaries and shares in officers' and directors' names that are subject to forfeiture.

(2) Not applicable.

(c) We have not paid any cash dividends with respect to common stock. There are no contractual restrictions on our present or future ability to pay cash dividends, however, we intend to retain any earnings in the near future for operations.

ITEM 6. SELECTED FINANCIAL DATA.

The following tables show certain selected historical financial data for USE for the five years ended May 31, 2002. The selected financial data is derived from and should be read with the financial statements for USE included in this Report.

Edgar Filing: US ENERGY CORP - Form 10-K/A

32

	May 31,			
	2002	2001	2000	1999
	----	----	----	----
Current assets	\$ 4,897,600	\$ 3,330,000	\$ 3,456,800	\$ 12,718,900

Edgar Filing: US ENERGY CORP - Form 10-K/A

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following is Management's Discussion and Analysis of significant factors which have affected our liquidity, capital resources and results of operations during the periods included in the accompanying financial statements. The discussion contains forward-looking statements that involve risks and uncertainties. Due to uncertainties in our business, actual results may differ materially from the discussion below.

CRITICAL ACCOUNTING POLICIES

OIL AND GAS PRODUCING ACTIVITIES

We follow the full cost method of accounting for oil and gas properties. Accordingly, all costs associated with acquisition, exploration, and development of oil and gas reserves, including directly related overhead costs, are capitalized.

Once we begin production, all capitalized costs of oil and gas properties including the estimated future costs to develop proved reserves, will be amortized on the unit-of-production method using estimates of proved reserves. Investments in unproved properties and major exploration and development projects are not amortized until proved reserves associated with the projects can be determined. Unproved properties are assessed periodically to ascertain whether impairment has occurred. Such assessments could cause the Company to reduce the carrying values of the properties.

In addition, the capitalized costs are subject to a "ceiling test," which basically limits such costs to the aggregate of the "estimated present value," discounted at a 10-percent interest rate of future net revenues from proved reserves, based on current economic and operating conditions, plus the lower of cost or fair market value of unproved properties.

Sales of proved and unproved properties are accounted for as adjustments of capitalized costs with no gain or loss recognized, unless such adjustments would significantly alter the relationship between capitalized costs and proved reserves of oil and gas, in which case the gain or loss is recognized in income. Abandonments of properties are accounted for as adjustments of capitalized costs with no loss recognized.

LIQUIDITY AND CAPITAL RESOURCES

During fiscal 2002, our cash position increased by \$1,878,800 over the prior balance at May 31, 2001 to a cash balance of \$2,564,300. This increase came as a result of \$1,822,300 and \$3,391,300 being generated in investing activities and financing activities, respectively. This increase in cash of \$5,213,600 was offset by a reduction of \$3,334,800 which was consumed in operations.

Operations for the fiscal year ended May 31, 2002, resulted in a net loss of \$6,267,600. The major noncash components of the net loss for the year were: Depreciation of \$541,500; impairment of goodwill of \$1,622,700; services which were paid for with our common stock \$787,700; gain on the sale of assets of \$812,700; provision for bad debts of \$171,200; noncash compensation of \$535,200; and the net change in assets and liabilities of \$115,200.

Edgar Filing: US ENERGY CORP - Form 10-K/A

During December 2001, we purchased equity in Rocky Mountain Gas, Inc. ("RMG") from certain minority shareholders under the terms of their initial investment which allowed for a conversion to shares of our common stock if certain conditions were not met. Subject to those conversion terms, we purchased 1,105,499 shares of RMG stock (adding to our original consolidated ownership an additional 8.7% ownership interest in RMG), by issuing a total of 912,233 shares of our common stock at \$3.92 per share. An impairment of \$1,622,700 was taken on this investment in RMG during the third quarter of fiscal 2002 as

35

RMG had no production and to bring the total investment in RMG carried on our books in line with the fair market value of RMG assets, the impairment was taken.

During fiscal 2002, there were shares of our common stock and warrants issued to our outside directors and consultants, which were valued at a total of \$787,700 in a noncash payment for services rendered. Our directors received 3,429 shares of our common stock valued at \$14,400 for annual director's fees; consultants received 45,000 shares of our common stock in exchange for \$148,100 in consulting services and other consultants and investors received warrants valued at \$625,200. The \$535,200 in noncash compensation was through the funding of our ESOP with 70,075 shares of our common stock valued at \$236,900 and the amortization of various Company stock bonus plans in the amount of \$298,300.

We sold our controlling interest in Ruby Mining Company ("Ruby") to Admiralty Corporation ("Admiralty") of Atlanta, Georgia in fiscal 2001. Admiralty has developed technology that differentiates ferrous from non-ferrous metals in sea water. This technology is used to explore for and recover sunken treasures. Admiralty paid us \$100,000 and signed a promissory note for \$225,000 for the purchase of Ruby. Admiralty defaulted on the payment of the promissory note. As a result, we recorded a provision for doubtful accounts for the balance due under the Admiralty note of \$171,200.

Investing activities provided \$1,822,300 during fiscal 2002. The primary components of this source of cash was the sale of an interest in RMG's coalbed methane properties to CCBM, Inc. ("CCBM") of Houston, Texas for \$1,125,000; proceeds of \$752,000 from the sale of various surplus equipment, and a net change of \$406,500 in the investment we have in affiliated companies. Uses of cash in Investing Activities were the expenses incurred in the exploration of RMG's coalbed methane properties of \$142,100; increased value of restricted investments of \$236,800 through the reinvestment of interest earned on those investments, and the purchase of \$82,300 of equipment.

RMG assigned CCBM an undivided 50% interest in all of RMG's existing coalbed methane properties (with the exception of Castle Rock of which only a 6.25% working interest was assigned) for the purchase price of \$7,500,000 by a promissory note payable in principal amounts of \$125,000 per month plus interest at 8% per annum over 41 months (starting on July 31, 2001) with a balloon payment due on the forty-second month. The note is secured by a pledge of CCBM's interest in the properties of RMG being purchased by CCBM. All payments on the promissory note principal, \$1,125,000 were taken against our full cost pool of coalbed methane gas properties. CCBM has made all payments due under the terms of the promissory note. CCBM also agreed to pay \$5,000,000 to drill and complete coalbed methane wells on RMG's properties. One half of this amount, \$2,500,000 will be credited against any drilling or property exploration and development costs that are the obligation of RMG. As of May 31, 2002, the total amount expended by CCBM towards this work commitment was \$2,245,000 leaving a balance

Edgar Filing: US ENERGY CORP - Form 10-K/A

under the work commitment of \$2,755,000 approximately half of which will be spent to cover RMG's commitments in the exploration and development of the joint properties.

RMG did expend \$142,100 in the exploration of coalbed methane properties during fiscal 2002, which were outside the work commitment of CCBM. We maintain cash investments in the amount of \$10,015,500, that are dedicated to reclamation liabilities and cannot be used for operations of the Company. These investments earn interest annually which is used to pay licensing fees on our uranium mill in southern Utah. Any unused earned interest proceeds are reinvested into the restricted investments. During fiscal 2002, restricted investments increased by \$236,800.

Financing activities during fiscal 2002 provided \$3,391,300. These proceeds were generated from the sale of common stock of the Company and its subsidiary RMG in the amount of \$3,957,400 and proceeds from long term debt, \$1,000,000. These cash proceeds from financing activities were partially offset by

36

repayments of the Company's line of credit and other long term debt in the amounts of \$650,000 and \$547,800, respectively.

The Company sold 871,592 shares of its common stock in private placements for a total of \$2,350,500. Employees of the Company also exercised options to purchase 253,337 shares of the Company's common stock for \$602,500. RMG sold 333,333 shares of its common stock in a private placement to outside investors for \$1,000,000. These shares of RMG stock were converted to common shares of the Company's common stock as discussed above.

On May 30, 2002, the Company entered into a debt financing agreement with an independent company. The Company secured \$1,000,000 in debt through this transaction which bears interest of 8% per annum and is due quarterly commencing on September 1, 2002. Collateral for the loan is a junior security interest in the assets of the Company. The entire debt is due on or before May 30, 2004. At the option of the lending company, all or any portion of the debt may be repaid with the common stock of the Company or RMG, at the rate of \$3.00 per share for Company shares, or \$1.50 per share for RMG shares. In addition, the lending company received detached warrants to purchase 120,000 shares of the Company and 120,000 shares of RMG's common stock at \$3.00 and \$1.50 per share, respectively and a beneficial conversion provision. The Company therefore recognized a discount on the \$1,000,000 loan in the total amount of \$670,100.

The balance of the increase in long term debt was for the financing of prepaid insurance and the financing of miscellaneous assets.

Working capital increased by \$2,557,900 from \$933,300 at May 31, 2001 to working capital of \$3,491,200 at May 31, 2002. This increase in working capital was primarily as a result of the increased cash receipts discussed above.

CAPITAL RESOURCES

The primary sources of our capital resources are cash on hand; collection of receivables; receipt of monthly payments from CCBM for the purchase of an interest in RMG's coalbed methane properties; CCBM funding of drilling and development programs; projected production from RMG's coalbed methane properties; sale of excess mine, construction and drilling equipment; sale of real estate properties which are no longer needed in the core business of the

Edgar Filing: US ENERGY CORP - Form 10-K/A

Company; sale of partial ownership interest in mineral properties; proceeds under the line of credit; equity financing of the Company's subsidiaries; and the final determination of the Sheep Mountain Partners ("SMP") arbitration/litigation. We will also continue to receive revenues from our motel and real estate operations in southern Utah.

Drilling and development capital requirements will be satisfied for the majority of fiscal 2003 from the CCBM work commitment of which there is \$2,755,000 remaining as of May 31, 2002. Approximately one-half of this amount will be paid by CCBM on behalf of RMG for its obligations for drilling and property development of coalbed methane properties. There is also a balance of \$6,375,000 due from CCBM under its purchase agreement. Under the terms of the promissory note, this amount will continue to be paid at the rate of \$125,000 per month plus interest until November 2004 at which time a balloon payment of \$2,375,000 is due. CCBM's interest in RMG's coalbed methane properties is pledged as security for the note to RMG. After CCBM has paid \$2,500,000 (33%) of the principal amount of the promissory note, RMG will release 25% of the undivided interest in the coalbed methane properties purchased by CCBM; another 25% when \$5,000,000 (66.6%) of the principal is paid, and the balance of the total 50% undivided interest when all of the principal amount of \$7,500,000 of the purchase price has been paid.

Under the agreement with CCBM, CCBM also agreed to use its best efforts to obtain financing to raise no less than \$20 million to be used by RMG to acquire more coalbed methane properties. CCBM has

37

not been successful in raising these funds within the terms of the agreement due to market conditions for coalbed methane gas. RMG has extended the time for CCBM to raise the funds to June 30, 2003. If CCBM is unsuccessful in raising the funds to purchase additional coalbed methane properties or for any reason determines to discontinue participation in the exploration and development of RMG's coalbed methane properties, RMG will continue to seek equity or industry funding to develop its properties.

The Company has shut down its mines and has discontinued its mining and construction operations. It therefore has surplus equipment and buildings from these operations. During fiscal 2001 and 2002, the Company sold the majority of its surplus equipment. In addition, the Company owns various raw land which is held as investment property or were intended to be used in mining operations. These properties are no longer needed for the core business of the Company and will be sold. The Company currently has an offer to sell a piece of property in California which was previously held for the development of a mill tailings site for its subsidiary Sutter Gold Mining Company, ("SGMC"). This property was never developed for a tailings site so has no reclamation liability.

The Company continues to market home and mobile home lots in southern Utah. These fully developed properties are not important to the operations of the Company. The lots were a portion of the assets that the Company acquired when it purchased the Shootaring uranium mill and Ticaboo Townsite. The Company has also listed the commercial operations at Ticaboo for sale. It is the intention of management of the Company to sell this commercial property. The Company also has determined to sell the Shootaring uranium mill. It is the goal of the Company's management to sell the mill as a unit but proposals to sell the mill parts have also been considered. No firm proposal is currently being considered on the mill.

Edgar Filing: US ENERGY CORP - Form 10-K/A

To assist in financing the holding costs of the SGMC properties (which are shut down), the Company developed a mine tour business. After operating the mine tour business for approximately one year, it was determined to lease out the tour business. Proceeds under the lease agreement partially defray the holding costs of the mine property. The Company is currently discussing the potential of either a sale of the property to an industry partner or a possible joint venture agreement to operate the property. Equity financing will be required to develop the mine and mill complex. A decision to further develop the property at Sutter is contingent on the price of gold.

We currently have a \$750,000 line of credit with a commercial bank. As of May 31, 2002, this line of credit has been drawn down by \$200,000. The line of credit will be renewed in September of 2002. Due to the sale of mining equipment, which was held as collateral for the line of credit, the limit of the line of credit may be reduced. We also have a \$500,000 line of credit through our affiliate Plateau Resources. This line of credit is for the development of the Ticaboo Townsite in southern Utah. Plateau has drawn down \$300,000 of this financing facility which is repayable over 10 years. All payments on these lines of credit are current as of the filing date of this report.

We have been involved in litigation with Nukem, Inc. involving SMP for the past eleven years. The U.S. District Court of Colorado has appointed a Special Master to determine the value of the purchase rights, the pounds of uranium and the profits under certain contracts Nukem entered into with 3 CIS Republics, which contracts have been placed in a constructive trust. The Special Master is currently performing the accounting. The Federal Court has ordered that the accounting be completed and filed with the Court by December 6, 2002 with a further status hearing to be held on December 13, 2002. The ultimate outcome of this litigation cannot be determined but management of the Company believes that it will be beneficial to the Company.

We believe that these cash resources will be sufficient to sustain operations during fiscal 2003.

38

CAPITAL REQUIREMENTS

The primary capital requirements during fiscal 2003 are expected to be exploration and development of coalbed methane properties; the cost of maintaining our uranium properties that are shut down; the shut down SGMC properties holding costs; and general and administrative costs. Estimated capital requirements for fiscal 2003 are: \$873,500 for the exploration and holding costs of coalbed methane properties; costs to hold uranium properties that are shut down and associated real estate assets in the amount of \$600,000; shut down SGMC properties holding costs of \$230,000, and general and administrative costs of \$3,885,000. These allocations and estimates may vary depending on the level of acquisition and drilling RMG participates in during the year.

EXPLORATION OF COALBED METHANE PROPERTIES

The majority of the fiscal 2003 exploration costs associated with the coalbed methane properties of RMG has been funded through the CCBM agreement. Under the CCBM purchase and sale agreement, if properties are drilled that are owned 50% by RMG, we may be required to fund the drilling costs for the interest

Edgar Filing: US ENERGY CORP - Form 10-K/A

ownership of the remaining non-participating parties. Should we be required to fund any non-participating entities portion of the exploration programs, there is a back-in provision on each property which gives RMG a disproportionate amount of the production revenues until our cost and additional amounts are recovered before the non-participating parties begin to receive production funds.

HOLDING COSTS OF SHUT DOWN MINERAL PROPERTIES

SMP URANIUM PROPERTIES

The holding costs associated with the uranium mineral properties formerly owned by Sheep Mountain Partners ("SMP"), are approximately \$28,000 per month. We continue to implement cost cutting measures to reduce the holding costs. We have begun the process of reclamation on certain of these mine properties and will continue to do work during fiscal 2003. It is estimated that \$50,000 in reclamation work will be completed on the SMP mine properties during fiscal 2003. The Company is seeking final approval from the regulatory agencies of the reclamation work completed on the GMIX water treatment plant during fiscal 2002.

PLATEAU RESOURCES URANIUM PROPERTIES

Plateau owns the Ticaboo Townsite, which includes a motel, convenience store, boat storage, restaurant and lounge. Prior to fiscal 2002, we operated all of these entities. A decision was made to lease out all but the motel operations during fiscal 2002. This decision relieved us of the obligation and expense of employees, inventory and risk of loss from the business operations.

Additionally, Plateau owns and maintains the Tony M uranium property and Shootaring Canyon uranium mill. The uranium property and mill are both shut down. We are pursuing alternative uses for these properties including the potential sale of the uranium mill. There are no major reclamation projects anticipated on the mill or mine properties during fiscal 2003.

SUTTER GOLD MINING COMPANY PROPERTIES

Due to the depressed market price of gold, further work on the SGMC properties has been deferred until the price of gold improves. In the meantime, SGMC developed a tourism business to cover the holding costs of the properties. A decision was made to lease out the tourism business to a third party. The revenues received from the lease cover a majority of our holding costs associated with the mine, shop and mineral leases. We have one employee at the SGMC properties to preserve the core assets and properties. SGMC is

39

in the process of evaluating the potential of selling certain of the non-essential land positions that it has acquired in developing a mine plan. SGMC is also considering other alternatives such as equity financing or obtain industry partners to develop the property in the event that market prices reach to the level to warrant placing the properties into production.

Carrying values for the SGMC properties, as of May 31, 2002, are lower than the fair market value of the properties. These properties consist primarily of raw land that was purchased for a mill tailings cell but is no longer needed under the new mine development plan. The land is in the path of a proposed highway development project by the State of California.

Edgar Filing: US ENERGY CORP - Form 10-K/A

DEBT PAYMENTS

Debt to non-related parties at May 31, 2002 was \$2,559,000 as compared with \$2,294,500 at May 31, 2001. The increase in debt to non-related parties of \$264,500 consists of debt incurred to finance annual insurance premiums of \$250,500; purchase of equipment of \$180,600; and the convertible debt in the amount of \$1,000,000 from an independent company which was discounted by \$670,100 for detached warrants and a beneficial conversion provision, which will be amortized over the life of the debt. During fiscal 2002 the Company made payments on outstanding debt in the amount of \$496,500. Payment requirements on this debt during fiscal 2003 is \$80,000 of interest on the convertible debt and \$205,700 in principal payments on the balance of the debt. Principal requirements of long term debt are \$205,700, \$540,200, \$182,200, \$199,000, \$1,036,600 and \$394,000 for fiscal 2003 through 2008, respectively. At May 31, 2002, the Company borrowed \$200,000 under its \$750,000 line of credit with a commercial bank. The line of credit is to be renewed in September of 2002.

FEDERAL INCOME TAX ISSUES

During fiscal 2002, the Internal Revenue Service ("IRS") audited our books and records for the fiscal years ended May 31, 1999 and 2000. The audits have been completed and all issues agreed to. There were no changes in the amount of taxes due as a result of these audits. All issues through May 31, 2000 are now settled and the years through then are closed.

RECLAMATION COSTS

The reclamation obligations are long term and are either bonded through the use of cash bonds or the pledge of assets. It is anticipated that only \$50,000 of reclamation work will be performed during fiscal 2003. The reserves to pay the reclamation obligations are either real estate holdings of the Company that are pledged or restricted cash investments.

The reclamation liability on the Plateau uranium mining and milling properties in Utah is \$7,382,100 which is reflected on the Balance Sheet as a reclamation liability. This liability is fully funded by cash investments that are recorded as long term restricted assets.

The reclamation costs of the Sheep Mountain uranium properties in Wyoming are \$1,496,800 and are covered by a reclamation bond which is secured by a pledge of certain of our real estate assets.

The reclamation requirements for the SGMC properties is approximately \$27,900. This reclamation obligation is bonded with a cash bond.

40

RESULTS OF OPERATIONS

FISCAL 2002 COMPARED TO FISCAL 2001

Edgar Filing: US ENERGY CORP - Form 10-K/A

Revenues:

Revenues from operations decreased by \$1,258,900 to \$2,004,100 during fiscal 2002 from the \$3,263,000 recognized during fiscal 2001. Components of this decrease are reductions of \$426,500 in motel, real estate and airport operations; mineral sales of \$334,300; mineral royalties of \$108,500; and management fees of \$389,600. Mineral sales during fiscal 2001 resulted from purchase of uranium oxide on the open market to fill uranium sales contracts and the sale of a uranium contract to a third party. We did not supply any of the uranium sold under the contracts from production out of our mines. We have not produced any minerals from mines for several years. The uranium contracts expired and no molybdenum advance royalties have been received since 2001.

The reduction of motel, real estate and airport operations of \$426,500 was primarily as a result of reduced revenues at our Ticaboo motel in southern Utah. The reduction in revenues in the tourism business is attributed to the general decline in the economy as well as the negative effect that the terrorist attacks have had on people's desire to travel.

There were no mineral sales during fiscal 2002 while there was one delivery under a uranium contract as well as the sale of one of the Company's uranium contracts to a third party during fiscal 2001. Currently the Company does not have any delivery contracts for uranium or any other mineral. Depending on the outcome of the SMP litigation, the Company may well have CIS pounds of uranium for which it will need to obtain delivery contracts.

The Company holds a 6% royalty on the Mt. Emmons molybdenum deposit near Crested Butte, CO. Under the provisions of the royalty agreement, the Company and Crested are to receive 50,000 pounds of molybdenum or its cash equivalent annually as an advance royalty. The royalty agreement was originally made with AMAX, Inc., which was purchased by Cyprus Minerals Company in 1993 and changed its name to Cyprus Amax Minerals Company ("Cyprus Amax"). In 1999, Cyprus Amax was purchased by Phelps Dodge Corporation. AMAX and Cyprus had made the advance royalty payments to USECC on a timely basis. Phelps Dodge made one advance royalty payment and ceased making payments in fiscal 2001. Phelps Dodge has suspended payments under the advance royalty agreement and has sued the Company. The Company has filed counter claims against Phelps Dodge requesting that the advance royalty and other issues be reinstated. It is not known what the outcome of this litigation will be.

Management fees were reduced by \$389,600 in fiscal 2002 from the prior period due to reduced activity in the entities from which management fees are collected.

Costs and Expenses:

During fiscal 2002, costs and expenses were reduced by \$1,322,500. This reduction was as a result of reduced activity in our commercial operations in southern Utah because some of the operations were leased to third parties, and the general economy turned down as a result of terrorist attacks. This reduced both revenues as discussed above and costs and expenses of \$1,307,300. The holding costs of mineral properties were reduced by \$1,661,500 as a result of the Company reducing costs associated with mineral properties that are shut down. The general and administrative costs were reduced by \$104,700. In addition to these reductions in costs and expenses, the Company recognized an expense of \$123,800 in abandonment of mining equipment during fiscal 2001. There was no abandonment expense in fiscal 2002.

Edgar Filing: US ENERGY CORP - Form 10-K/A

These reductions in costs and expenses were offset by increases in impairment of goodwill of \$1,622,700; provision for doubtful accounts of \$171,200 and other expenses of \$80,900. The impairment of goodwill came as a result of the Company purchasing an additional 8.7% of RMG equity or 1,105,499 shares of RMG stock by issuing 912,233 shares of the Company's common stock. The shares of the Company's common stock were valued at \$3.92 per share. An impairment of \$1,622,700 was taken on this investment in RMG as RMG had no gas production and the impairment brought the total investment in RMG in line with the fair market value of the RMG assets.

A provision for doubtful accounts was provided on the balance of a note receivable that the Company held for the sale of Ruby Mining Company to Admiralty Corporation. The note was in the original amount of \$225,000 and had been reduced to \$171,200. The note went in default during fiscal 2002 at which time the Company began negotiations with Admiralty to resolve the issue of the outstanding balance. Terms were reached which required Admiralty to pay interest on the note, plus accrued interest, through August 2003, at which time the entire note balance would come due. Due to the financial condition of Admiralty, it is not known if that company will be able to pay off the balance of the note. The entire amount of the note was therefore reserved.

Other Income and Expenses:

Gain on sale of assets income decreased by \$350,900 during fiscal 2002 to \$812,700. This decrease was as a result of the sale of a majority of the surplus mining equipment that the Company had for sale during the prior year. During fiscal 2002, there was no income from litigation settlements while during fiscal 2001 there was \$7,132,800 in litigation settlement as a result of the Company settling all issues appertaining to the Kennecott litigation. Interest income increased by \$152,400 during fiscal 2002 over fiscal 2001 as did interest expense which increased by \$80,000 for the same period. These increases were as a result of larger amounts invested in interest bearing accounts and increased debt.

Operations for the twelve months ended May 31, 2002 resulted in a net loss of \$6,267,600 or \$0.67 per share as compared to net income of \$1,771,200 or \$0.23 per share for the previous year.

FISCAL 2001 COMPARED TO FISCAL 2000

Revenues:

Operating revenues during fiscal 2001 decreased \$40,900 from revenues for the previous year to \$3,263,000. This decrease was primarily as a result of a decrease in revenues from motel, real estate and airport operations. This decrease was offset by increases in mineral sales and management fees.

During fiscal 2001, we recorded \$334,300 in revenues from mineral sales compared with no mineral sales revenue during the previous year. The increase was the result of the sale of a uranium delivery contract to a non-affiliated company, and a delivery of uranium made under that market related contract before the sale of the contract. There were no similar sales of uranium during the same period of the prior year. The Company purchased the uranium necessary to deliver to its contract. The Company has not produced uranium for several

Edgar Filing: US ENERGY CORP - Form 10-K/A

years.

Revenues from motel, real estate and airport operations decreased from \$2,734,800 at May 31, 2000 to \$2,222,400 at May 31, 2001. This decrease is as result of the mine tour at SGMC and the boat storage, restaurant and convenience store operations being leased to third parties by Plateau during fiscal 2001.

Management fees increased \$161,300 to \$597,800 during fiscal 2001. This increase was due to RMG operations on which we receive a management fee.

42

Costs and Expenses:

Costs and expenses decreased by \$3,879,200 during fiscal 2001 to \$10,780,800 from \$14,660,000 during the previous year. This reduction in costs and expenses came as a result of reduced motel, real estate and airport operations expense of \$151,100, and general and administrative costs and expenses of \$3,805,900. These reductions in costs and expenses were offset by increases in mineral holding costs and expenses of \$662,600; and abandonment of mining equipment of \$123,800.

General and administrative costs during fiscal 2000 were significantly higher than those experienced during fiscal 2001 due to a noncash charge to operations of \$3,139,100 as a result of the issuance of common shares of RMG stock below the market. Other reductions in general and administrative costs and expenses during fiscal 2001 were related to a reduction of staff.

Other Income and Expenses:

As a result of the settlement of the Kennecott litigation, \$7,132,800 was recorded as revenue during fiscal 2001. This revenue has two components: (1) Noncash revenues as a result of the recognition of \$4,000,000 of a deferred GMMV purchase option payment that was received in 1997 and (2) the receipt of cash from Kennecott as a result of the settlement, \$3,132,800 - net of accounts receivable from GMMV.

During the fiscal 2001, we recognized a gain of \$1,163,600 from the sale of equipment that was determined to be surplus. One component of this amount was the sale of certain GMMV assets that were distributed to the Company from the GMMV upon the resolution of the Kennecott litigation. The other main components of this increase are the final royalty payment received from the sale of The Brunton Company of \$233,000, and the sale of a real estate property in Colorado of \$264,600.

Operations for the fiscal year ended May 31, 2001, resulted in earnings of \$1,771,200 or \$0.21 per share fully diluted as compared to a loss of \$10,621,000 or \$1.33 per share fully diluted for the fiscal year ended May 31, 2000.

FUTURE OPERATIONS

We have generated operating losses in each of the last three years as a result of costs associated with shut down mineral properties. We have maintained some of our investments in gold and uranium properties that have not generated operating revenues. These properties require expenditures for items such as

Edgar Filing: US ENERGY CORP - Form 10-K/A

permitting, care and maintenance, holding fees, corporate overhead and administrative expenses. Success in the minerals industry is dependent on the price that a producer can receive for its minerals. We cannot predict what the long term price for gold and uranium will be and therefore cannot predict when, or if, we will generate net income from these operations.

At May 31, 2002 we are committed to be in the coalbed methane business well into the future. Uranium prices and market projections are being evaluated. Decisions to liquidate part or all of the Company's uranium holdings are being considered. We are also evaluating its commitment to the gold business depending on the price for gold recovering.

43

EFFECTS OF CHANGES IN PRICES

Mineral operations are significantly affected by changes in commodity prices. As prices for a particular mineral increase, prices for prospects for that mineral also increase, making acquisitions of such properties costly, and sales advantageous. Conversely, a price decline facilitates acquisitions of properties containing that mineral, but makes sales of such properties more difficult. Operational impacts of changes in mineral commodity prices are common in the mining industry.

NATURAL GAS. Our decision to expand into the coalbed methane gas industry were predicated on the projections for natural gas demand and prices.

URANIUM AND GOLD. Changes in the prices of uranium and gold will affect our operational decisions in the future. Currently, both gold and uranium are at low prices. We continually evaluate market trends and data. We do not plan to go forward with any work on our uranium and gold properties until the market price for these metals increase and remain at profitable levels.

MOLYBDENUM AND OIL. Changes in prices of molybdenum and petroleum are not expected to materially affect our operations during fiscal 2003.

ITEM 8. FINANCIAL STATEMENTS

Financial statements meeting the requirements of Regulation S-X for the Company follow immediately. Please note that the financial information contained in these financial statements for the year ended May 31, 2000 was audited by Arthur Andersen LLP who has ceased operations. A copy of Arthur Andersen's previously issued audit report, dated September 11, 2000 is included in this filing. This report has not been revised. This report refers to financial information for the two years ended May 31, 2000. However, only the information for the year ended May 31, 2000 is included in the financial statements filed with this report.

44

Edgar Filing: US ENERGY CORP - Form 10-K/A

REPORT OF INDEPENDENT CERTIFIED PUBLIC ACCOUNTANTS

To U.S. Energy Corp.:

We have audited the accompanying consolidated balance sheets of U.S. ENERGY CORP. (a Wyoming corporation) AND SUBSIDIARIES as of May 31, 2002 and May 31, 2001, and the related consolidated statements of operations, shareholders' equity and cash flows for each of the two years in the period ended May 31, 2002. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits. The financial statements of U.S. ENERGY CORP. AND SUBSIDIARIES as of and for the year ended May 31, 2000, were audited by other auditors who have ceased operations. Those auditors expressed an unqualified opinion on those financial statements before the reclassifications described in Notes B and L in their report dated September 11, 2000.

As described in Notes B and L, the financial statements include certain reclassifications. We have audited the reclassifications that were applied to the 2000 financial statements. In our opinion, such reclassification adjustments are appropriate and have been properly applied. However, we were not engaged to audit, review, or apply any procedures to the 2000 financial statements of the Company other than with respect to such reclassification adjustments and accordingly, we do not express an opinion or any form of assurance on the 2000 financial statements taken as a whole.

We conducted our audits in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the 2002 and 2001 consolidated financial statements referred to above present fairly, in all material respects, the financial position of U.S. Energy Corp. and subsidiaries as of May 31, 2002 and 2001, and the results of their operations and their cash flows for each of the two years ended May 31, 2002, in conformity with accounting principles generally accepted in the United States of America.

The accompanying financial statements have been prepared assuming the Company will continue as a going concern. As discussed in Note A to the financial statements, the Company has experienced recurring losses from operations and has a substantial accumulated deficit. These factors raise substantial doubt about the ability of the Company to continue as a going concern. Management's plans in regards to these matters are also described in Note A. The financial statements do not include any adjustments that might result from the outcome of this uncertainty.

GRANT THORNTON LLP

Denver, Colorado,
July 18, 2002

Edgar Filing: US ENERGY CORP - Form 10-K/A

The report that appears below is a copy of the report issued by the Company's previous independent auditor, Arthur Andersen, LLP. That firm has discontinued performing auditing and accounting services.

REPORT OF INDEPENDENT PUBLIC ACCOUNTANTS

To U.S. Energy Corp.:

We have audited the accompanying balance sheet of U.S. Energy Corp. (a Wyoming corporation) as of May 31, 2000, and the related consolidated statements of operations, shareholders' equity and cash flows for the year ended May 31, 2000. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of U.S. Energy Corp. as of May 31, 2000, and the results of operations and cash flows for the year ended May 31, 2000, in conformity with accounting principles generally accepted in the United States.

U.S. ENERGY CORP. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
MAY 31, 2002

A. BUSINESS ORGANIZATION AND OPERATIONS:

U.S. Energy Corp. and subsidiaries (the "Company" or "USE") was incorporated in the State of Wyoming on January 26, 1966. The Company engages in the acquisition, exploration, holding, sale and/or development of mineral and coalbed methane gas properties, the production of petroleum properties and marketing of minerals and methane gas. Principal mineral interests are in uranium, gold, molybdenum and the Company's mineral properties are currently in a shut down status. The Company holds various real and personal properties used in commercial activities. Most of these activities are conducted through the joint venture discussed below and in Note D.

The Company was engaged in the maintenance of two uranium properties, one in southern Utah, and the second known as Sheep Mountain Partners ("SMP"). Both of these ventures have been involved in significant litigation (see Note K). Sutter Gold Mining Company ("SGMC"), a Wyoming corporation owned 66.3% by the Company at May 31, 2002, manages the Company's interest in gold properties. The Company also owns 100% of the outstanding stock of Plateau Resources Limited ("Plateau"), which owns a nonoperating uranium mill and support facilities in southeastern Utah. Currently, the mill is nonoperating but has been granted a license to operate subject to certain conditions. Rocky Mountain Gas, Inc. ("RMG") was formed in fiscal 2000 to consolidate all methane gas operations of the Company. The Company owns and controls 91.7% of RMG as of May 31, 2002.

MANAGEMENT'S PLAN

The Company has generated significant net losses during two of the past three fiscal years ending May 31, 2002 and has an accumulated deficit of approximately \$34,567,600 at May 31, 2002. The Company has working capital of approximately \$3,491,200 at May 31, 2002 and its cash balance has increased from \$685,500 at the prior year end to \$2,564,300 at May 31, 2002. Although the cash

Edgar Filing: US ENERGY CORP - Form 10-K/A

position of the Company improved during the year ended May 31, 2002, the Company has experienced negative cash flows during fiscal 2001 and 2000 in the amounts of \$230,900 and \$9,256,600, respectively.

After the CCBM work commitment has been fully funded, the Company does not have current funds available to fund its portion of the anticipated exploration and development activities on its coalbed methane properties. Additionally, the Company's known cash flows through May 31, 2003 for current operations and associated overhead are negative based on current projections. In order to improve liquidity of the Company, management intends to do the following:

- o Increase production from the Bobcat coalbed methane property which was purchased during fiscal 2003. Management believes that production can be increased as the coals are de-watered and more gas wells are placed on production. The Company is also working to assist in reducing the price differential that affects Wyoming gas production. These two factors along with anticipated higher production demand pushing methane gas prices higher should have a significant impact on the Company's cash flows.

56

U.S. ENERGY CORP. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

MAY 31, 2002

(CONTINUED)

- o Continue to reduce its mining and construction activities resulting in surplus equipment and buildings. The Company sold a portion of this equipment during fiscal 2002 and 2001 and plans to continue selling the balance of the surplus equipment and buildings during fiscal 2003. This reduction in equipment and buildings will improve cash flow of the Company.
- o Sell home and mobile home lots at its commercial operations in southern Utah. These lots are no longer needed for current operations and will provide cash flows to the Company.
- o Sell the Ticaboo Townsite in southern Utah. Included in the townsite is a motel, C store, restaurant/lounge, boat storage and repair facility and undeveloped land. The sale of this property would increase cash position of the Company significantly and would allow the employees of the Company to concentrate on the Company's core business of coalbed methane.
- o Sell raw land in Riverton, Wyoming and Sutter Creek, California. Management intends to sell this land at its fair market value. The land is not needed for the operations of the Company now or into the future. The land in California was originally purchased to be used as a mill tailings cell site. Although the property was permitted for that purpose, no actual construction of the tailings cell has occurred. The State of California has plans to build a highway through the property and has made an offer to purchase the property. The Company has other property for a proposed tailings site.
- o Seek equity funding or a joint venture partner to place the SGMC

Edgar Filing: US ENERGY CORP - Form 10-K/A

property into production or sell the entire property to an industry partner. Currently, the Company has several third party companies who are looking at options.

- o Raise additional capital through a private placement and a public offering on its subsidiary Rocky Mountain Gas, Inc. The timing of such a public offering will depend on the market prices for methane gas.
- o Reduce overhead expenses and concentrate on its primary business - coalbed methane.

Additionally, management of the Company believes that funds will be received as a result of the accounting that is currently being conducted by the Special Master under the direction of the U.S. District Court, District of Colorado in the litigation with Nukem, Inc. The Court ordered that the final accounting be delivered to the Court no later than December 6, 2002. Management cannot predict the ultimate outcome of the litigation, however, management of the Company believes it will be beneficial to the Company.

As a result of these plans, management believes that they will generate sufficient cash flows to meet its current obligations in fiscal 2003.

57

U.S. ENERGY CORP. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS MAY 31, 2002 (CONTINUED)

B. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES:

PRINCIPLES OF CONSOLIDATION

The consolidated financial statements of USE and subsidiaries include the accounts of the Company, the accounts of its majority-owned or controlled subsidiaries Plateau (100%), Energx, Ltd ("Energx") (90%), Four Nines Gold, Inc. ("FNG") (50.9%), SGMC (66.3%), Crested Corp. ("Crested") (70.5%), Yellowstone Fuels Corp. ("YSFC") (35.9%) Rocky Mountain Gas ("RMG") (91.7%), Northwest Gold, Inc. ("NWG") (96%) and the USECC Joint Venture ("USECC"), a consolidated joint venture which is equally owned by U.S. Energy Corp. and Crested, through which the bulk of their operations are conducted.

Prior to fiscal 2001, Ruby Mining Company ("Ruby") which was 91% owned by the Company, was also consolidated. During 2001, Ruby was sold to a third party and therefore is no longer consolidated.

With the exception of YSFC, investments in joint ventures and all 20% to 50% owned companies are accounted for using the equity method (see Note E). YSFC was an equity investee through February 1999, at which time the Company purchased the majority of the shares of common stock of YSFC owned by outside shareholders by issuing 677,167 shares of Company's common stock. As a result of the common directors and control of YSFC by USE and its employees, YSFC was consolidated as of March 1, 1999. Investments of less than 20% are accounted for by the cost method. All material intercompany profits, transactions and balances have been eliminated.

Edgar Filing: US ENERGY CORP - Form 10-K/A

CASH EQUIVALENTS

The Company considers all highly liquid investments with original maturities of three months or less to be cash equivalents.

RESTRICTED INVESTMENTS

Based on the provisions of Statement of Financial Accounting Standards No. 115 ("SFAS 115"), the Company accounts for its restricted investment in certain securities as held-to-maturity. Held-to-maturity securities are measured at amortized cost. If a decline in fair value of such investments is determined to be other than temporary, the investment is written down to fair value.

INVENTORIES

Inventories consist primarily of retail inventory of aviation and automobile fuel and associated aircraft parts for motel and airport operations and mining supplies. Retail inventories are stated at lower of cost or market using the average cost method. Inventories used in operations are stated at the lower of cost or market.

58

U.S. ENERGY CORP. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

MAY 31, 2002

(CONTINUED)

PROPERTIES AND EQUIPMENT

Land, buildings, improvements, machinery and equipment are carried at cost. Depreciation of buildings, improvements, machinery and equipment is provided principally by the straight-line method over estimated useful lives ranging from 3 to 45 years. Following is a breakdown of the lives over which assets are depreciated.

Office Equipment	3 to 5 years
Field Tools and Hand Equipment	5 to 7 years
Vehicles and Trucks	3 to 7 years
Heavy Equipment	7 to 10 years
Service Buildings	20 years
Corporate Headquarter's Building	45 years

The Company capitalizes all costs incidental to the acquisition and exploration of mineral properties as incurred. Costs are changed to operations if the Company determines that the property is not economical. Costs and expenses related to general corporate overhead are expensed as incurred.

The Company has acquired substantial mining properties and associated facilities at minimal cash cost, primarily through the assumption of reclamation and environmental liabilities. Certain of these properties are owned by various ventures in which the Company is either a partner or venturer. (See Note K.)

OIL AND GAS PROPERTIES

The Company follows the full cost method of accounting for oil and gas

Edgar Filing: US ENERGY CORP - Form 10-K/A

properties. Accordingly, all costs associated with acquisition, exploration, and development of oil and gas reserves, including directly related overhead costs, are capitalized.

All capitalized costs of oil and gas properties including the estimated future costs to develop proved reserves, will be amortized on the unit-of-production method using estimates of proved reserves. Investments in unproved properties and major exploration and development projects are not amortized until proved reserves associated with the projects can be determined or until impairment occurs. If the results of an assessment indicate that the properties are impaired, the capitalized cost of the property will be written off.

After there are proven reserves, the capitalized costs associated with those reserves are subject to a "ceiling test," which basically limits such costs to the aggregate of the "estimated present value," discounted at a 10-percent interest rate of future net revenues from proved reserves, based on current economic and operating conditions, plus the lower of cost or fair market value of unproved properties.

As of May 31, 2002 the Company had begun the dewatering process on exploratory wells it had drilled. Until sufficient wells are dewatered, the amount of reserves (if any) cannot be determined. This process can take up to 24 months from when the first few wells are drilled. The Company therefore cannot determine at May 31, 2002 if an impairment of acquisition and impairment costs has occurred. In the event

59

U.S. ENERGY CORP. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS MAY 31, 2002 (CONTINUED)

that the drilling and dewatering efforts do not produce economic reserves, the acquisition, exploration and development costs associated with the property will be written off.

Sales of proved and unproved properties are accounted for as adjustments of capitalized costs with no gain or loss recognized, unless such adjustments would significantly alter the relationship between capitalized costs and proved reserves of oil and gas, in which case the gain or loss is recognized in income. Abandonments of properties are accounted for as adjustments of capitalized costs with no loss recognized.

LONG-LIVED ASSETS

The Company evaluates its long-lived assets (other than oil and gas properties which are discussed above) for impairment when events or changes in circumstances indicate that the related carrying amount may not be recoverable. If the sum of estimated future cash flows on an undiscounted basis is less than the carrying amount of the related asset, an asset impairment is considered to exist. The related impairment loss is measured by comparing estimated future cash flows on a discounted basis to the carrying amount of the asset. Changes in significant assumptions underlying future cash flow estimates may have a material effect on the Company's financial position and results of operations. An uneconomic commodity market price, if sustained for an extended period of

Edgar Filing: US ENERGY CORP - Form 10-K/A

time, or an inability to obtain financing necessary to develop mineral interests, may result in asset impairment.

During fiscal 2002, the Company recorded \$1,622,700 impairment of goodwill that arose as part of the purchase of an additional 1,105,499 shares of RMG common stock. These shares of stock were purchased by issuing 910,320 shares of the Company's common stock pursuant to conversion rights granted RMG private placement investors.

During fiscal 2001, the Company recorded an impairment on its mineral properties of \$123,800 in YSFC. As of May 31, 2002, management believes no further impairment is necessary and that the fair market of remaining assets exceeds the carrying value. See Note F for further discussion.

FAIR VALUE OF FINANCIAL INSTRUMENTS

The carrying amount of cash equivalents, receivables, other current assets, accounts payable and accrued expenses approximates fair value because of the short-term nature of those instruments. The recorded amounts for short-term and long-term debt, approximate fair market value due to the variable nature of the interest rates on the short term debt, and the fact that interest rates remain general unchanged from issuance of the long term debt.

REVENUE RECOGNITION

Revenues from motel, real estate and airport operations are for the rental of motel rooms, boat storage facilities and mobile home lots at the Company's operations in southern Utah as well as the rental of office space in office buildings in Riverton, Wyoming. Airport operations consist of the sale of aviation fuel, repair

60

U.S. ENERGY CORP. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

MAY 31, 2002

(CONTINUED)

and maintenance of aircraft and rental of hanger space. All these revenues are reported on a gross revenue basis and are recorded at the time the service is provided.

Revenues from mineral sales consist of the sale of uranium to a delivery contract and the sale of that contract to a third party supplier. The sale of uranium is reported on a net basis. The Company has not produced any uranium from its properties during the period covered by the enclosed financial statements and has purchased all uranium delivered under its supply contracts from the open market as all the Company's uranium operations are shut down.

Mineral royalties which are non-refundable are recognized as revenue when received (see Note F).

Management fees are recorded as a percentage of actual costs for services provided for subsidiaries and partnerships for which the Company provides management services. The Company is also paid a management fee for overseeing oil production on the Fort Peck Reservation in Montana. Management fees are recorded when the service is provided.

Edgar Filing: US ENERGY CORP - Form 10-K/A

INCOME TAXES

The Company accounts for income taxes under the provisions of Statement of Financial Accounting Standards No. 109 ("SFAS 109"), "Accounting for Income Taxes". This statement requires recognition of deferred income tax assets and liabilities for the expected future income tax consequences, based on enacted tax laws, of temporary differences between the financial reporting and tax bases of assets, liabilities and carryforwards.

SFAS 109 requires recognition of deferred tax assets for the expected future effects of all deductible temporary differences, loss carryforwards and tax credit carryforwards. Deferred tax assets are reduced, if deemed necessary, by a valuation allowance for any tax benefits which, based on current circumstances, are not expected to be realized.

NET (LOSS) INCOME PER SHARE

The Company reports net (loss) income per share pursuant to Statement of Financial Accounting Standards No. 128 ("SFAS 128"). SFAS 128 specifies the computation, presentation and disclosure requirements for earnings per share. Basic earnings per share is computed based on the weighted average number of common shares outstanding. Diluted earnings per share is computed based on the weighted average number of common shares outstanding adjusted for the incremental shares attributed to outstanding options to purchase common stock, if dilutive. Potential common shares relating to options and warrants are excluded from the computation of diluted earnings (loss) per share, because they were antidilutive, totaled 466,000, 661,679 and 335,420 for the years ended May 31, 2002, 2001 and 2000, respectively.

61

U.S. ENERGY CORP. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS MAY 31, 2002 (CONTINUED)

COMPREHENSIVE INCOME

There are no components of comprehensive income which have been excluded from net income and, therefore, no separate statement of comprehensive income has been presented.

RECENT ACCOUNTING PRONOUNCEMENTS

In July 2001, the Financial Accounting Standards Board issued SFAS No. 143, "Accounting for Asset Retirement Obligations." The statement requires entities to record the fair value of a liability for legal obligations associated with the retirement of obligations of tangible long-lived assets in the period in which it is incurred. When the liability is initially recorded, the entity increases the carrying amount of the related long-lived asset. Accretion of the liability is recognized each period, and the capitalized cost is depreciated over the useful life of the related asset. Upon settlement of the liability, an entity either settles the obligation for its recorded amount or incurs a gain or loss upon settlement. The standard is effective for fiscal years beginning after June 15, 2002, with earlier application encouraged. The Company is currently

Edgar Filing: US ENERGY CORP - Form 10-K/A

evaluating the effect of adopting SFAS No. 143 on its financial statements and has not determined the timing of adoption.

The Company has reviewed other current outstanding statements from the Financial Accounting Standards Board and does not believe that any of those statements will have a material adverse affect on the financial statements of the Company when adopted.

USE OF ESTIMATES

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions. These estimates and assumptions affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements, and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

RECLASSIFICATIONS

Certain reclassifications have been made in the prior years financial statements in order to conform with the presentation for the current year.

C. RELATED-PARTY TRANSACTIONS:

The Company provides management and administrative services for affiliates under the terms of various management agreements. Revenues from services by the Company to unconsolidated affiliates were \$78,800, \$132,500, and \$39,900 and in fiscal 2002, 2001, and 2000, respectively. The Company has \$132,800 of receivables from unconsolidated subsidiaries as of May 31, 2002.

As of May 31, 2002, the Company had notes receivable due from certain directors and employees of the Company totaling \$65,000 due December 31, 2002. This indebtedness is secured by 144,000 shares of the Company's common stock. During fiscal 2002, this debt was reduced by \$115,300.

62

U.S. ENERGY CORP. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

MAY 31, 2002

(CONTINUED)

D. USECC JOINT VENTURE:

The Company operates the Glen L. Larsen office complex; an aircraft hangar with a fixed base operation, office space and certain aircraft; holds interests in various mineral operations; conducts oil and gas operations; and transacts all operating and payroll expenses through a joint venture with Crested, the USECC joint venture.

E. INVESTMENTS IN AND ADVANCES TO AFFILIATES:

The Company's restricted investments secure various decommissioning, reclamation and holding costs. Investments are comprised of debt securities issued by the U.S. Treasury that mature at varying times from three months to one year from the original purchase date. As of May 31, 2002 and 2001, the cost

Edgar Filing: US ENERGY CORP - Form 10-K/A

of debt securities was a reasonable approximation of fair market value. These investments are classified as held-to-maturity under SFAS 115 and are measured at amortized cost.

The Company's investment in and advances to affiliates are as follows:

	Consolidated Ownership -----	Carrying Value at May 31, -----	
		2002 -----	2001 -----
Powder River Gas LLC	--	\$ --	\$ 16,200

Equity loss from investments accounted for by the equity method are as follows:

	Year Ended May 31, -----		
	2002 -----	2001 -----	2000 -----
Ruby Mining Company**	\$ --	\$ --	\$ (2,900)**

** Consolidated beginning December 1, 1999. This represents the equity loss through November 30, 1999. Ruby was sold during fiscal 2001 and is no longer consolidated.

Condensed combined balance sheets and statements of operations of the Company's equity investees for fiscal 2000 include Ruby Mining Company.

F. MINERAL CLAIMS TRANSACTIONS:

GMMV

During fiscal 1990, the Company entered into an agreement with Kennecott, a wholly-owned, indirect subsidiary of The RTZ Corporation plc, for Kennecott to acquire a 50% interest in certain uranium mineral properties in Wyoming known as the Green Mountain Properties. During the life of the venture, the parties entered into various amendments to the GMMV agreement.

Edgar Filing: US ENERGY CORP - Form 10-K/A

As a result of sustained depressed uranium prices, the GMMV properties were maintained on a shut down basis. During fiscal 2000, certain disputes arose in the GMMV venture and Kennecott sued the Company. On September 11, 2000, the parties settled all disputes by Kennecott paying the Company \$3.25 million and Kennecott assuming all reclamation liabilities of the GMMV Properties.

SMP

During fiscal 1989, the Company, through USECC, entered into an agreement to sell a 50% interest in their Sheep Mountain properties to Nukem's subsidiary CRIC. USECC and CRIC immediately contributed their 50% interests in the properties to a newly-formed partnership, Sheep Mountain Partners ("SMP"). SMP was established to further explore uranium mineralization on the claims on Sheep Mountain, acquire uranium supply contracts and market uranium. Certain disputes arose among USECC, CRIC and its parent Nukem, Inc. over the operation of SMP. These disputes have been in litigation/arbitration for the past ten years. See Note K for a description of the investment and a discussion of the related litigation/arbitration.

Due to the litigation and arbitration proceedings involving SMP for the past ten years, the Company has expensed all of its costs related to SMP and has no carrying value of its investment in SMP as proceeds from litigation and arbitration proceedings were accounted for under the cost recovery method of accounting as discussed in Note K. The Company's direct loss generated from its investment in SMP, which represents mine holding costs incurred directly by the Company, was \$508,600, \$399,300, and \$711,300 for the years ended May 31, 2002, 2001 and 2000, respectively.

As part of a partial settlement agreement dated June 1, 1998, the Company was awarded the return of its Sheep Mountain uranium mines and certain other properties. Accordingly, all mine holding costs were expensed by the Company during fiscal 2002, 2001 and 2000.

PHELPS DODGE

During prior years, the Company conveyed interests in mining claims to AMAX Inc. ("AMAX") in exchange for cash, royalties, and other consideration. There are no remaining values on the balance sheets of the Company at May 31, 2002 or 2001, relating to these claims. AMAX merged with Cyprus Minerals ("Cyprus Amax") which was purchased by Phelps Dodge Mining Company ("Phelps Dodge") in December of 1999. The properties have not been placed into production as of May 31, 2002.

AMAX and later Cyprus Amax, paid the Company an annual advance in royalty of 50,000 pounds of molybdenum (or its cash equivalent). During fiscal 2000, Phelps Dodge assumed this obligation and made payments to the Company during fiscal 2001. Phelps Dodge is entitled to a partial credit against future royalties for any advance royalty payments made, but such royalties are not refundable if the properties are not placed into production. The Company recognized \$0, \$108,500, and \$132,600 of revenue from the advance royalty payments in fiscal 2002, 2001, and 2000, respectively. Phelps Dodge did not make the payment of the advance royalty during 2002. The Company considers this a breach of Phelps Dodge's contractual obligations and has filed suit against Phelps Dodge. See Note K for further discussion.

Edgar Filing: US ENERGY CORP - Form 10-K/A

U.S. ENERGY CORP. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
MAY 31, 2002
(CONTINUED)

Phelps Dodge may elect to return the properties to the Company, which would cancel future obligations under the advance royalty obligation. If Phelps Dodge formally decides to place the properties into production, it is obligated to pay \$2,000,000 to the Company. Also, per the contract with AMAX, the Company is to receive 15% of the first \$25,000,000, or \$3,750,000, if the molybdenum properties are sold, which the Company believes has occurred.

SUTTER GOLD MINE COMPANY

SGMC was established in 1990 to conduct operations on mining leases and to produce gold from the Lincoln properties in California. SGMC has not generated any significant revenue and has no assurance of future revenue. All acquisition and mine exploration costs since inception were initially capitalized. Due to the decline in the spot price for gold and the lack of adequate financing, SGMC has the mine on a shut down status and written down the associated properties. Management believes that the fair market value of the remaining assets exceeds the carrying value. The remaining SGMC assets include raw land which is no longer needed in the mining operations, buildings and equipment.

Primarily as a result of the sustained decline in gold prices and the uncertainty of when prices might recover, the Company evaluated the carrying value of its SGMC properties for impairment, and in fiscal 1999 and 1998, the Company recorded an impairment in the amount of \$10,718,300 and \$1,500,000 respectively.

This impairment, which was taken as required under the provisions of SFAS # 121, resulted in a write-off of nearly 85% of the cost of these properties to values that were estimated to be fair market values at that time based on the salvage values of equipment and the local tax assessor's assessed values of the land, buildings and improvements.

Since the date of the last impairment in 1999, the Company has annually determined whether or not events or changes in circumstances had occurred suggesting that additional impairment of the assets of Sutter under SFAS # 121 was necessary. The Company did not deem it necessary to further impair the assets in 2002 or 2001 based on the assessed valuations of the property. An offer to purchase a portion of the land in Sutter during 2002 and current assessed valuations of the property and improvements suggest that the Sutter property is still valued at or below fair market value.

The Company will continue to evaluate the carrying value of its long-lived assets and long-lived assets to be disposed of under the provisions of SFAS # 121 and will obtain third-party appraisals of the properties during fiscal 2003 as additional support for the carrying values of the property.

65

U.S. ENERGY CORP. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Edgar Filing: US ENERGY CORP - Form 10-K/A

MAY 31, 2002
(CONTINUED)

YELLOW STONE FUELS CORP.

In fiscal 1998, the Company became contractually obligated to exchange its common stock for common stock of YSFC, plus interest, because certain conditions were not met (See Note J). As a result of depressed market prices for uranium, YSFC was not successful in the public offering of its common stock. As a result, the terms of the exchange agreement became effective between the Company and YSFC shareholders. The Company therefore issued 677,167 shares of its common stock. The exchange offer for YSFC remained effective until September 13, 1999.

Due to continued low uranium market prices and the inability to raise financing to place the YSFC properties into production, the Company recorded an impairment of \$123,800 in fiscal 2001 and \$2,506,100 in 1999 related to YSFC's properties, which is classified as abandonment of mining equipment in the accompanying Consolidated Statements of Operations. The impairment was specifically related to the YSFC mining equipment in fiscal 2001.

PLATEAU RESOURCES LIMITED

During fiscal 1994, the Company entered into an agreement with Consumers Power Company to acquire all the issued and outstanding common stock of Plateau, a Utah corporation. Plateau owns a uranium processing mill and support facilities and certain other real estate assets through its wholly-owned subsidiary Canyon Homesteads, Inc. in southeastern Utah. The Company paid nominal cash consideration for the Plateau stock and agreed to assume all environmental liabilities and reclamation bonding obligations. At May 31, 2002, Plateau had a cash security in the amount of \$9,900,900 to cover reclamation of the properties (see Note K).

The Company is currently evaluating the best utilization of Plateau's properties. Evaluations are ongoing to determine when, or if, the mine and mill properties should be placed into production. The primary factor in these evaluations relates to the current depressed uranium market. Revenues are being generated from the townsite assets which include a motel, C-store, lounge, restaurant, boat storage facility and housing.

The convenience store, lounge and restaurant, and boat storage facility are leased to third party companies. The Company receives rent on these facilities and a percentage of the revenues of each operation. The Company is also considering the possibility of selling the mill facility.

RUBY MINING COMPANY

During fiscal 2001, the Company sold its controlling interest in Ruby Mining Company to Admiralty Company. The Company retained 900,000 shares of Ruby Mining common stock; received \$100,000 upon closing, and a promissory note in the amount of \$225,000. Because the promissory note is currently in default, the Company has written off the note and will account for any future collection on a cash basis.

Edgar Filing: US ENERGY CORP - Form 10-K/A

U.S. ENERGY CORP. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
MAY 31, 2002
(CONTINUED)

ROCKY MOUNTAIN GAS, INC.

During fiscal 2000, the Company organized RMG to enter into the coalbed methane gas business. RMG is engaged in the acquisition of coalbed methane gas leases and the exploration for methane gas on those properties. The Company owns and controls 91.7% of RMG. RMG sold 333,333, 53,000 and 1,203,333 shares, respectively, of its common stock in private placements during fiscal 2002, 2001 and 2000, respectively, for total proceeds of approximately \$4,669,000.

RMG entered into an agreement with Quantum Energy, L.L.C. (Quantum has since changed its name to ("Quaneco")) on January 3, 2000 to purchase a 50% working interest and 40% net revenue interest in approximately 185,000 acres of unproven leasehold interests in the Powder River Basin of southeastern Montana. The terms of the Quantum agreement were payments of \$3,200,000 on closing, \$1,000,000 on or before May 1, 2000 and \$1,300,000 on or before December 31, 2000. RMG also had a \$2,500,000 work commitment to drill approximately 25 wells on the Quantum properties by November 30, 2000.

During fiscal 2001, RMG and Quaneco entered into an Option and Farmin Agreement with Suncor (Natural Gas) America, Inc. ("SENGAI") on 112,000 acres in southeast Montana. SENGAI paid \$1,705,000 for the right to exercise the option, of which \$1,278,800 was due to RMG. These funds were applied to the final payment due under the Quaneco agreement. All amounts due to Quaneco had been paid as of May 31, 2002.

SENGAI also committed to assume \$2,000,000 of the remaining \$2,250,000 drilling commitment that RMG had under its drilling commitment to Quaneco. SENGAI made the decision not to exercise its option on the acreage. RMG also acquired a 100% working interest (82% revenue interest) in 63,000 net mineral acres in southwest Wyoming.

On July 10, 2001, RMG closed a Purchase and Sale Agreement with CCBM, Inc. ("CCBM"), a wholly-owned subsidiary of Carrizo Oil & Gas, Inc. of Houston, Texas. CCBM purchased an undivided 50% interest in all of RMG's existing coalbed properties. CCBM signed a \$7,500,000 Promissory Note payable in principal amounts of \$125,000 per month plus interest at annual rate of 8% over 41 months (starting July 31, 2001) with a balloon payment due on the forty-second month. The 50% undivided interest is pledged back to RMG to secure the purchase price, and will be released 25% when 33.3% of the principal amount of the purchase price is paid, another 25% when the total principal payments reach 66% of the principal amount of the purchase price and the balance when the total principal amount is paid.

CCBM has also agreed to fund \$5,000,000 for an initial drilling program. If CCBM fails to expend \$5,000,000 in the drilling program or \$2,500,000 for RMG's benefit, CCBM will be obligated to pay any remaining unspent portions of the \$2,500,000 directly to RMG. If CCBM defaults on its purchase obligation CCBM will still earn a 50% working interest in each well location (80 acres) and production therefrom. CCBM's ownership will be earned on these wells regardless of the status of the payments on the promissory note.

Edgar Filing: US ENERGY CORP - Form 10-K/A

U.S. ENERGY CORP. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

MAY 31, 2002

(CONTINUED)

CCBM will be entitled to a credit (applied as a prepayments of the purchase price for the production of the undivided 50% interest in RMG's acreage), equal to 20% of RMG's net revenue interest from wells drilled with the \$5,000,000 until CCBM equals \$1,250,000 from production proceeds.

OIL AND GAS PROPERTIES AND EQUIPMENT INCLUDED THE FOLLOWING:

	May 31,		
	2002	2001	2000
Oil and gas properties:			
Subject to amortization	\$ 1,773,600	\$ 1,773,600	\$ 1,773,600
Not subject to amortization:			
Acquired in fiscal 2002	363,900	--	--
Acquired in fiscal 2001	1,154,500	1,154,500	--
Acquired in fiscal 2000	4,727,200	4,727,200	4,727,200
	8,019,200	7,655,300	6,500,800
Sale of gas interests	(1,250,000)	--	--
	6,769,200	7,655,300	6,500,800
Accumulated depreciation, depletion and amortization	(1,773,600)	(1,773,600)	(1,773,600)
Net oil and gas properties	\$ 4,995,600	\$ 5,881,700	\$ 4,727,200

The Company began drilling of its coalbed methane properties during 2001. At such time as production begins on these properties the cost associated with the development of such production will be added to the amortization base. Production is projected to begin in fiscal 2003.

G. DEBT:

LINES OF CREDIT

The Company has a \$750,000 line of credit from a commercial bank. The line of credit has a variable interest rate (5.75% as of May 31, 2002). The weighted average interest rate for 2002 was 6.5%. As of May 31, 2002, \$200,000 was outstanding on this line of credit. The line of credit is collateralized by

Edgar Filing: US ENERGY CORP - Form 10-K/A

certain real property and a share of the net proceeds of fees from production from certain oil wells.

69

U.S. ENERGY CORP. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

MAY 31, 2002

(CONTINUED)

A valuation allowance for deferred tax assets is required when it is more likely than not that some portion or all of the deferred tax assets will not be realized. The ultimate realization of this deferred tax asset depends on the Company's ability to generate sufficient taxable income in the future. Management believes it is more likely than not that the net deferred tax asset will not be realized by future operating results.

The Company has established a valuation allowance of \$8,565,800 and 11,152,000 against deferred tax assets due to the losses incurred by the Company in past fiscal years. The Company's ability to generate future taxable income to utilize the NOL carryforwards is uncertain.

The income tax provision (benefit) is different from the amounts computed by applying the statutory federal income tax rate to income before taxes. The reasons for these differences are as follows:

	Year Ended May 31,		
	2002	2001	2000
	-----	-----	-----
Expected federal income tax	\$(2,131,000)	\$ 602,200	\$(3,618,200)
Net operating losses not previously			

Edgar Filing: US ENERGY CORP - Form 10-K/A

benefitted and other	4,717,200	2,213,300	(10,600)
Valuation allowance	(2,586,200)	(2,815,500)	3,628,800
	-----	-----	-----
Income tax provision	\$ --	\$ --	\$ --
	=====	=====	=====

There were no taxes currently payable as of May 31, 2002, 2001 or 2000 related to continuing operations.

At May 31, 2002, the Company and its subsidiaries had available, for federal income tax purposes, net operating loss carryforwards of approximately \$22,500,000 which will expire from 2006 to 2022. The Internal Revenue Code contains provisions which limit the NOL carryforwards available which can be used in a given year when significant changes in company ownership interests occur. In addition, the NOL amounts are subject to examination by the tax authorities.

The Internal Revenue Service has audited the Company's and subsidiaries tax returns through the year ended May 31, 2000. The Company's income tax liabilities are settled through fiscal 2000.

J. SHAREHOLDERS' EQUITY:

STOCK OPTION PLANS

The Board of Directors adopted the U.S. Energy Corp. 1989 Stock Option Plan for the benefit of USE's key employees. The Option Plan, as amended and renamed the 1998 Incentive Stock Option Plan ("1998 ISOP"), reserved 2,750,000 shares of the Company's \$.01 par value common stock for issuance under the 1998 ISOP. Options which expired without exercise were available for reissue. During fiscal 1992, the Company issued 371,200 non-qualified options to certain of its executive officers, Board members and others at prices ranging from \$2.75 to \$2.90 per share. Unexercised options expired on April 14, 2002 and April 30, 2002. During fiscal 1996, the Company issued options to purchase 360,000 common shares at \$4.00 per share. Unexercised options expired on December 31, 2000. During fiscal 1999, the Company issued 837,500 options under the 1998 ISOP, including 299,462 non-qualified and 538,038 qualified options. The non-qualified options were issued at a price below fair market value, resulting in the recognition of \$262,000 in compensation expense at the time of issuance. During fiscal 2001, the Company issued 1,499,000 options under the 1998 ISOP, including 918,763 non-qualified and 580,237 qualified options. Various employees exercised 118,703 of the outstanding options raising \$288,400 of capital. During fiscal 2002, various employees exercised 253,337 of the outstanding options raising \$602,500 of capital.

In December 2001, the Board of Directors adopted (and the shareholders approved) the U.S. Energy Corp. 2001 Incentive Stock Option Plan (the "2001 ISOP") for the benefit of USE's key employees. The 2001 ISOP reserves 3,000,000

Edgar Filing: US ENERGY CORP - Form 10-K/A

shares of the Company's \$.01 par value common stock for issuance for a period of 10 years. During fiscal 2002, the Company issued 1,030,000 options to certain of its employees, executive officers, and board members at \$3.90 per share. These options will expire in December, 2011.

The 2001 ISOP replaces the 1998 ISOP, however, options granted under the 1998 ISOP remain exercisable until their expiration date under the terms of that Plan.

EMPLOYEE STOCK OWNERSHIP PLAN

The Board of Directors of USE adopted the U.S. Energy Corp. 1989 Employee Stock Ownership Plan ("ESOP") in 1989, for the benefit of USE employees. During fiscal 2002, 2001 and 2000, the Board of Directors of USE contributed 70,075, 53,837, and 123,802 shares to the ESOP at prices of \$3.29, \$5.35, and \$3.00 per share, respectively. The Company has expensed \$236,900, \$288,000, and \$371,400 in fiscal 2002, 2001, and 2000, respectively related to these contributions. USE has loaned the ESOP \$1,014,300 to purchase 125,000 shares from the Company and 38,550 shares on the open market. These loans, which are secured by pledges of the stock purchased, bear interest at the rate of 10% per annum. The loans are reflected as unallocated ESOP contribution in the equity section of the accompanying Consolidated Balance Sheets.

EXECUTIVE OFFICER COMPENSATION

In May 1996, the Board of Directors of USE approved an annual incentive compensation arrangement ("1996 Stock Award Program") for its CEO and four other officers of the Company payable in shares of the

74

U.S. ENERGY CORP. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

MAY 31, 2002

(CONTINUED)

Company's common stock. The 1996 Stock Award Program was subsequently modified to reflect the intent of the directors which was to provide incentive to the officers of the Company to remain with USE. The shares are to be issued annually pursuant to the recommendation of the Compensation Committee on or before January 15 of each year, beginning January 15, 1997, as long as each officer is employed by the Company. The officers will receive up to an aggregate total of 67,000 shares per year for the years 1997 through 2002. The shares under the plan are forfeitable until retirement, death or disability of the officer. The shares are held in trust by the Company's treasurer and are voted by the Company's non-employee directors. As of May 31, 2002, 349,158 total shares have been issued to the five officers of the Company under the 1996 Stock Award Plan.

In December 2001, the Board of Directors adopted (and the shareholders approved) the 2001 Stock Award Plan to compensate five of its executive officers and the president of RMG. Under the Plan, an aggregate of 60,000 shares may be issued each year from 2002 through 2006. No shares were issued under this Plan in fiscal 2002.

OPTIONS AND WARRANTS TO OTHERS

Edgar Filing: US ENERGY CORP - Form 10-K/A

During fiscal 1998, the Company and YSFC entered into an Exchange Rights Agreement (the "Agreement"). Under the Agreement the YSFC private placement shareholders and related broker agent had the right, but not the obligation, to exchange their shares in YSFC for USE common stock if YSFC's common shares were not listed and available for quotation on the NASDAQ marketing system by March 1998. The Company exchanged 677,167 shares of its common stock during fiscal 1999, at a fair value of \$2,591,500, for 1,131,500 shares of YSFC common stock or 9% of the outstanding shares of YSFC. During fiscal 2000, the Company issued an additional 57,752 shares of its common stock valued at \$206,900 for an additional 96,250 shares of YSFC common stock or an additional 1% of the outstanding shares of YSFC common stock. The exchange rate for USE shares was the price paid for the YSFC's common shares plus 10% per annum return to the investor from the date of purchase. The number of USE shares exchanged was based on the exchange rate for a share of USE common stock for the five business days prior to the date of notice given by the YSFC shareholder to exchange their shares.

In January 1998, the Company entered into a warrant purchase agreement with another investment advisory firm to purchase 200,000 shares of the Company's common stock at an exercise price of \$7.50/share expiring January 20, 2000. The warrants were issued in exchange for services to be provided during the period from January 1998 to January 1999. The Company determined the fair value associated with these warrants to be \$264,000, which was recognized ratably over the term of the related advisory agreement. Accordingly, \$27,000 was recognized as an expense in fiscal 2000 and \$176,000 in fiscal 1999.

In February of 1999, the Company entered into a warrant purchase agreement with a consulting firm to purchase 20,000 shares of the Company's common stock at an exercise price of \$2.62 expiring January 31, 2002 (extended to October 15, 2002). The warrants were issued in exchange for services to be provided during the period from February 1999 to February 2000. The Company determined the fair value associated with these warrants to be \$36,000, which is recognized ratably over the term of the consulting agreement. Accordingly, \$9,000 was recognized as an expense in fiscal 1999 and \$27,000 in fiscal 2000.

75

U.S. ENERGY CORP. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

MAY 31, 2002

(CONTINUED)

Also, during fiscal 1999, the Company issued warrants in exchange for outstanding YSFC warrants, which were originally issued for services provided by outside consultants in connection with the agreement discussed above. The Company issued 67,025 warrants at an exercise price of \$3.64 expiring September 19, 2002. The Company determined the fair value associated with these warrants to be \$167,000, which was recorded as an additional investment in YSFC during fiscal 1999. During fiscal 2002, a warrant for 6,703 shares was canceled and 20,000 shares were issued to its holder in exchange for services provided during fiscal 2002.

In February 1999, the Company entered into a consulting agreement with an individual to provide consulting and other services for a period of 24 months, commencing on February 8, 1999 and ending on January 31, 2001. As consideration for services to be performed, the Company granted the individual 25,000 shares of the Company's common stock at a grant price of \$2.75 per share and entered

Edgar Filing: US ENERGY CORP - Form 10-K/A

into a 5 year warrant purchase agreement to purchase up to 75,000 shares of the Company's common stock at an exercise price of \$2.25 per share, expiring February 8, 2004. The Company determined the fair value associated with the stock grant to be \$68,750 and the warrants to be \$140,000, which were recognized ratably over the term of the consulting agreement. Accordingly, \$69,550; \$104,400; and \$34,800 were recognized as an expense in fiscal 2001, 2000 and 1999, respectively related to this agreement.

During fiscal 2000, the Company issued 200 shares of its \$.01 par value mandatorily convertible preferred stock for \$2,000,000. A commission of \$160,000 was paid to an independent broker on this transaction. This preferred stock was mandatorily convertible into either 677,667 shares of common stock of RMG or into shares of common stock of the Company at the market price of the Company's common stock on the date of conversion. The preferred shares were convertible at the earlier of the date RMG completed an initial public offering of its common stock or April 11, 2002. During December 2001, the Company converted this preferred stock to common stock by issuing 513,140 shares of its common stock to the holder of the preferred stock. Dividends of \$80,500, \$150,000 and \$20,800 were paid on the preferred stock in 2002, 2001 and 2000, respectively.

During fiscal 2001, the Company entered into a consulting agreement with a company to provide consulting services for a period of two years, commencing on April 11, 2001. In addition to a monthly cash payment of \$2,000, the Company issued the consultant an option to purchase up to 20,000 shares of the Company's common stock at \$3.98 per share. The option expires on April 10, 2006. The fair value of the grant was \$65,180.

Also during fiscal 2001, the Company entered into a consulting agreement with a company to provide consulting and other services for a period of 18 months, commencing on May 14, 2001 and ending on November 14, 2002. As consideration for services to be performed, the Company issued the consultant 15,000 shares of the Company's common stock at a grant price of \$4.70 per share and entered into two stock option agreements to purchase up to 30,000 shares of the Company's common stock at an exercise price of \$4.70, expiring May 14, 2003. The first option for 10,000 shares, is exercisable upon the condition that the Company's common stock market price closes at or above \$6.50 per share for ninety (90) consecutive days prior to the expiration date of May 14, 2003. The exercise price of this option equaled or exceeded market price of the stock at the date of grant. The second option for 20,000 shares is exercisable if and when the

76

U.S. ENERGY CORP. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS MAY 31, 2002 (CONTINUED)

Company's common stock market price closes at or above \$10.00 per share for ninety (90) consecutive days prior to its expiration date on May 14, 2003.

During fiscal 2002, the Company raised \$2,350,500 by issuing 871,592 shares of common stock with 437,511 detached warrants in two separate private placements.

In May 2002, the Company issued warrants to purchase 120,000 shares of the Company's common stock at \$3.00 per share, and warrants to purchase 120,000

Edgar Filing: US ENERGY CORP - Form 10-K/A

shares of the Company's subsidiary, RMG at \$1.50 per share in connection with a \$1 million convertible debt issue. The warrants expire on May 30, 2005. The fair value of the warrants was \$271,700 which has been recorded as a discount on the debt which will be amortized over the term of the convertible debt. Additionally, a discount of \$398,400 has been recorded against the convertible debt resulting from allocation of proceeds to the beneficial conversion feature of the debt instrument. The fair value of the warrants was estimated on the date of the grant using the Black-Scholes Options Pricing Model with the following weighted average assumptions: No expected dividends; expected volatility 51.3%; risk factor interest rate of 5% and expected life of three years.

FORFEITABLE SHARES

Certain of the shares issued to officers, directors, employees and third parties are forfeitable if certain conditions are not met. Therefore, these shares have been reflected outside of the Shareholders' Equity section in the accompanying Consolidated Balance Sheets until earned. During fiscal 1993, the Company's Board of Directors amended the stock bonus plan. As a result, the earn-out dates of certain individuals were extended until retirement. For the years ended May 31, 2001, 2000 and 1999, the Company had compensation expense of \$298,300; \$201,000; and \$173,300, respectively, resulting from these issuances. A schedule of total forfeitable shares for the Company is set forth in the following table:

STATEMENT OF FINANCIAL ACCOUNTING STANDARDS NO. 123 ("SFAS 123")

SFAS 123, "Accounting for Stock-Based Compensation," defines a fair value based method of accounting for employee stock options or similar equity instruments. However, SFAS 123 allows the continued measurement of compensation cost for such plans using the intrinsic value based method prescribed by APB Opinion No. 25, "Accounting for Stock Issued to Employees" ("APB 25"), provided that pro forma

78

U.S. ENERGY CORP. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

MAY 31, 2002

(CONTINUED)

disclosures are made of net income or loss and net income or loss per share, assuming the fair value based method of SFAS 123 had been applied. The Company has elected to account for its stock-based compensation plans under APB 25; accordingly, for purposes of the pro forma disclosures presented below, the Company has computed the fair values of all options granted using the Black-Scholes pricing model and the following weighted average assumptions (no options were granted during 2000):

	2002	2001	2000
	----	----	----
Risk-free interest rate	5.6%	4.29%	--
Expected lives	10 years	10 years	--
Expected volatility	62.65	73.1%	--
Expected dividend yield	--	--	--

To estimate expected lives of options for this valuation, it was assumed options will be exercised upon expiration at the end of the ten years. All options are initially assumed to vest. Cumulative compensation cost recognized in pro forma net income or loss with respect to options that are forfeited prior to vesting is adjusted as a reduction of pro forma compensation expense in the period of forfeiture. Pro forma stock-based compensation, net of the effect of

Edgar Filing: US ENERGY CORP - Form 10-K/A

forfeitures, was \$3,079,700, \$2,746,600 and \$0 for 2002, 2001 and 2000, respectively.

If the Company had accounted for its stock-based compensation plans in accordance with SFAS 123, the Company's net loss and pro forma net loss per common share would have been reported as follows:

	Year Ended May 31,		
	2002	2001	2000
Net loss to common shareholders			
As reported	\$ (6,267,600)	\$ 1,771,200	\$ (10,662,600)
Pro forma	\$ (9,347,300)	\$ (975,400)	\$ (10,662,600)
Net loss per common share			
As reported, Basic	\$ (.67)	\$.23	\$ (1.39)
As reported, Diluted	\$ (.67)	\$.21	\$ (1.39)
Pro forma, Basic	\$ (1.01)	\$ (.12)	\$ (1.39)
Pro forma, Diluted	\$ (1.01)	\$ (.12)	\$ (1.39)

Weighted average shares used to calculate pro forma net loss per share were determined as described in Note B, except in applying the treasury stock method to outstanding options, net proceeds assumed received upon exercise were increased by the amount of compensation cost attributable to future service periods and not yet recognized as pro forma expense.

K. COMMITMENTS, CONTINGENCIES AND OTHER:

LEGAL PROCEEDINGS

Material pending proceedings are summarized below. Certain of the Company's affiliates are involved in ordinary routine litigation incidental to their business. Other proceedings which were pending in fiscal 2001 have been settled or otherwise finally resolved.

SHEEP MOUNTAIN PARTNERS ARBITRATION/LITIGATION

In 1991, disputes arose between the Company, Crested, Nukem, Inc. and its subsidiary Cycle Resource Investment Corp. ("CRIC"), concerning the formation and operation of the Sheep Mountain Partners partnership. Arbitration

Edgar Filing: US ENERGY CORP - Form 10-K/A

proceedings were initiated by CRIC in June 1991 and in July 1991, USECC filed a lawsuit against Nukem, CRIC and others in the U.S. District Court (District of Colorado) in Civil No. 91B1153. Later, USECC filed another suit for the standby costs at the SMP mines against SMP in the Colorado State Court. The Federal Court stayed both the arbitration proceedings and the State Court case. In February 1994, all of the parties agreed to consensual and binding arbitration of the disputes before the American Arbitration Association ("AAA"), for which the legal claims made by both sides included fraud and misrepresentation, breach of contract, breach of duties owed to the SMP partnership, and other claims.

The AAA panel (the "Panel") entered an Order and Award (the "Order") in April 1996 and clarified the Order on July 3, 1996, finding generally in favor of USE and Crested on certain of their claims (including the claims for reimbursement for standby maintenance expenses and profits denied SMP in Nukem's trading of uranium), and in favor of Nukem/CRIC and against USE and Crested on certain other claims, and imposing a constructive trust in favor of Sheep Mountain Partners on uranium contracts Nukem entered into to purchase uranium from CIS republics. USECC filed a petition for confirmation of the Order and on June 30, 1997, and the U.S. District Court confirmed the Order in its Second Amended Judgment (the "Judgment"). Thereafter, Nukem/CRIC appealed the Judgment to the 10th Circuit Court of Appeals ("CCA").

A three judge panel of the 10th CCA issued an Order and Judgment on October 22, 1998, which unanimously affirmed the Federal District Court's Second Amended Judgment without modification. The ruling affirmed (i) the imposition of a constructive trust in favor of SMP on Nukem's rights to purchase CIS uranium, the uranium acquired pursuant to those rights, and the profits therefrom; and (ii) the damage award against Nukem/CRIC. As a result of the ruling of the 10th CCA, USE and Crested received an additional \$6,077,264 (including interest and court costs) from Nukem in February 1999 for a total net monetary award of \$15,468,625 in the arbitration/litigation, and equitable relief in the form of USE's and Crested's interest in SMP, which holds the constructive trust over the CIS contracts. Nukem/CRIC filed two motions for entry of final satisfaction of Judgment. The U.S. District Court denied both motions, Nukem again appealed to the 10th CCA, which again affirmed the District Court's ruling, and held that Nukem/CRIC had not demonstrated that the Judgment had been satisfied because they had not provided USECC with an accounting of the partnerships assets.

81

U.S. ENERGY CORP. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS MAY 31, 2002 (CONTINUED)

In February 2001, the U.S. District Court appointed a Special Master to determine the amounts, if any, owed by Nukem to SMP pursuant to the constructive trust. The Special Master has ordered an accounting to identify all deliveries of CIS uranium made directly or indirectly to Nukem and any Nukem affiliates; to identify the ultimate disposition of all uranium purchased under the CIS contracts; to identify the location, number of pounds, and associated cost of uranium purchased under the CIS contracts at December 31, 2001, and to calculate the profits realized from the sale of CIS uranium. At a status hearing held before the U.S. District Court on August 23, 2002, the Court ordered the Special Master to file his report on or before December 6, 2002 and a further hearing to schedule arguments will be held before the Court on December 13, 2002.

Edgar Filing: US ENERGY CORP - Form 10-K/A

CONTOUR DEVELOPMENT LITIGATION

On July 28, 1998, USE filed a lawsuit in the United States District Court, Denver, Colorado, Case No. 98WM1630, against Contour Development Company, L.L.C. and entities and persons associated with Contour Development Company, L.L.C. (together, "Contour") seeking compensatory and consequential damages of more than \$1.3 million from the defendants for dealings in real estate owned by USE and Crested in Gunnison, Colorado. The Contour defendants asserted a counterclaim asking for payment of attorneys fee and costs. The matter has been settled, with USE receiving \$25,000 cash and unencumbered title to two commercial real estate lots covering seven acres in Gunnison, Colorado, and unencumbered title to five development lots covering 175 acres north of Gunnison, Colorado.

See "Business - Commercial Operations - Real Estate and Other Commercial Operations - Colorado Properties" above.

PHELPS DODGE LITIGATION

U.S. Energy Corp. and its majority-owned subsidiary, Crested Corp., d/b/a USECC, were served with a lawsuit on June 19, 2002, filed in the U.S. District Court of Colorado (Case No. 02-B-0796(PAC)) by Phelps Dodge Corporation and its subsidiary, Mt. Emmons Mining Company (MEMCO), over contractual obligations from USECC's agreement with Phelps Dodge's predecessor companies, concerning a mining property in Colorado.

The litigation stems from agreements that date back to 1974 when U.S. Energy and Crested Corp. leased mining claims on Mt. Emmons near Crested Butte, Colorado to AMAX Inc., Phelps Dodge's predecessor company. The claims cover one of the world's largest and richest deposits of molybdenum. AMAX reportedly spent over \$200 million on the acquisition, exploration and mine planning activities on the Mt. Emmons properties. In counter and cross-claims filed in the U.S. District Court of Colorado, USECC contends that Phelps Dodge and its subsidiaries committed several breaches of contracts related to the agreements, including breach of fiduciary obligations and covenants of good faith and fair dealing. USECC also contends Phelps Dodge is guilty of violating federal and state antitrust laws when it purchased Cyprus Amax Minerals Company (Cyprus Amax).

82

U.S. ENERGY CORP. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS MAY 31, 2002 (CONTINUED)

The complaint filed by Phelps Dodge and MEMCO seeks a determination that Phelps Dodge's acquisition of Cyprus Amax was not a sale. Under a 1986 agreement between USECC and AMAX, if AMAX sold MEMCO or its interest in the mining properties, U.S. Energy and Crested would receive 15% (7.5% each) of the first \$25 million of the purchase price (\$3.75 million). In 1991, Cyprus Minerals Company acquired AMAX to form Cyprus Amax Minerals Co. USECC's counter and cross-claims allege that in 1999, Phelps Dodge formed a wholly-owned subsidiary CAV Corporation, for the purpose of purchasing the controlling interest of Cyprus Amax and its subsidiaries (including MEMCO) at an estimated value in cash

Edgar Filing: US ENERGY CORP - Form 10-K/A

and Phelps Dodge stock exceeding \$1 billion and making Cyprus Amax a subsidiary of Phelps Dodge. Therefore, USECC asserts the acquisition of Cyprus Amax by Phelps Dodge was a sale of MEMCO and the properties that triggers the obligation of Cyprus Amax to pay USECC the \$3.75 million plus interest.

A second counterclaim by USECC rejects the claim by Phelps Dodge that it and its predecessors, Cyprus Amax and AMAX Inc., had mistakenly paid royalties to USECC since January 1991. In 1984, AMAX began paying the cash equivalent (half each to U.S. Energy and Crested Corp.) of 700,000 pounds of molybdenum per year as an advance royalty prior to the mine beginning production. In 1986, USECC agreed to assist financially troubled AMAX and substantially reduced the annual advance royalty to 50,000 pounds of molybdenum, so that AMAX could continue to hold the properties and eventually bring them into production. AMAX, Cyprus Amax and Phelps Dodge continued paying the annual advance royalties to U.S. Energy and Crested Corp. until the payment due in July 2001, when Phelps Dodge unilaterally ceased making the payments. Phelps Dodge and MEMCO seek a declaratory judgment that the advance royalty payment obligation has terminated, and further, that USECC should repay \$948,109 of royalties paid to USECC from 1993 through 2000, because those payments were made by mistake.

The third issue in the litigation is whether USECC must, under terms of a 1987 royalty deed, accept Phelps Dodge's and MEMCO's forth-coming conveyance of the Mt. Emmons properties back to USECC, which properties now include a plant to treat mine water, costing in excess of \$1 million a year to operate in compliance with State of Colorado regulations. Phelps Dodge's and MEMCO's threatened reconveyance would require USECC to assume the operating costs of the water treatment plant. USECC refuses to have the water treatment plant included in the return of the properties because, the USECC counterclaim argues, the properties must be in the same condition as when they were acquired by AMAX before the water treatment plant was constructed by AMAX.

The properties are comprised of 10 unpatented lode mining claims (for which patents are expected to be issued by the BLM in the near future), and 770 unpatented lode mining claims, for a total of 15,600 acres.

As added counterclaims, USECC seeks (i) damages for defendants' breach of covenants of good faith and fair dealing; (ii) damages for defendants' failure to develop the Mt. Emmons properties and not protecting USECC's rights as revisionary owner of the mining rights to the properties, (iii) damages for unjust enrichment of defendants; (iv) damages for breach of the defendants' fiduciary duties owed to USECC as revisionary owner of the property, and for neglecting to maintain the mining rights and interests in the properties; and (v) damages relating to defendants' actions in violation of federal and Colorado anti-trust and constraint of trade laws.

83

U.S. ENERGY CORP. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

MAY 31, 2002

(CONTINUED)

USECC also seeks a declaratory judgment of its rights and liabilities under the agreements affecting the Mt. Emmons properties; an injunction against defendants prohibiting the conveyance of the properties to USECC with the water treatment plan; an injunction against further waste of the properties by the defendants; an injunction requiring defendants to divest their molybdenum

Edgar Filing: US ENERGY CORP - Form 10-K/A

holdings (including the Mt. Emmons properties); and an injunction requiring defendants to assist USECC in mining molybdenum from the Mt. Emmons properties.

On August 2, 2002, Phelps Dodge and MEMCO filed a reply to the counterclaims of USECC and Cyprus Amax filed an answer to the counterclaims and third party complaint of USECC, generally denying the allegations of USECC. CAV Corporation filed a motion for summary judgment seeking dismissal of USECC's cross complaint and is pending. An order has been entered by the Court setting the Scheduling/Planning Conference in the case for September 12, 2002.

Except for the parties' claims regarding payment of the \$3.75 million due on the sale of MEMCO, payments of royalties, and responsibility going forward for payment of the operating costs of the water treatment plan, the financial impact to U.S. Energy Corp. and Crested Corp. of favorable or unfavorable outcomes in the litigation presently is not determinable.

LITIGATION INVOLVING LEASES ON COALBED METHANE PROPERTIES IN MONTANA

On or about April 1, 2001, the Company's subsidiary, Rocky Mountain Gas, Inc. (RMG) was served with a Second Amended Complaint wherein the Northern Plains Resource Council had filed suit in the U.S. District Court of Montana, Billings Division in Case No. CV-01-96-BLG-RWA against the United States Bureau of Land Management ("BLM"), RMG, certain of its affiliates (including U.S. Energy Corp. and Crested Corp.) some 20 other defendants. The plaintiff is seeking to cancel oil and gas leases issued to RMG et.al. by the BLM in the Powder River Basin of Montana and for other relief.

The basis for the complaint appears to be that the BLM's regulations require the BLM to respond to objections filed by persons owning land or lease rights adjacent to the coalbed properties which the BLM is offering to lease to the public. The argument of plaintiff appears to be that if objections are not responded to by the BLM prior to issuing CBM leases, the leases are invalid. Based on this argument, the plaintiff appears to have been successful in forcing cancellation of some CBM leases granted to others in the Powder River Basin of Montana, because the BLM did not respond to some objecting adjacent landowners. However, all of the BLM leases in Montana held by RMG (none are held by U.S. Energy Corp. or Crested Corp. in their own corporate names) are at least four years old, and there is no record of any objections being made to the issue of those leases.

Based on filings in the case to date, it appears that the BLM is taking the initiative in responding to the plaintiff. We believe RMG's leases were validly issued in compliance with BLM procedures, and do not believe the plaintiff's lawsuit will adversely affect any of RMG's Montana BLM leases.

U.S. ENERGY CORP. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
MAY 31, 2002
(CONTINUED)

RECLAMATION AND ENVIRONMENTAL LIABILITIES

Most of the Company's and Crested's exploration activities are subject to federal and state regulations that require the Company and Crested to protect

Edgar Filing: US ENERGY CORP - Form 10-K/A

the environment. The Company and Crested conduct their operations in accordance with these regulations. The Company's and Crested's current estimates of their reclamation obligations and their current level of expenditures to perform ongoing reclamation may change in the future. At the present time, however, the Company and Crested cannot predict the outcome of future regulation or impact on costs. Nonetheless, the Company and Crested have recorded their best estimate of future reclamation and closure costs based on currently available facts, technology and enacted laws and regulations. Certain regulatory agencies, such as the Nuclear Regulatory Commission ("NRC"), the Bureau of Land Management ("BLM") and the Wyoming Department of Environmental Quality ("WDEQ") review the Company's and Crested's reclamation, environmental and decommissioning liabilities, and the Company and Crested believe the recorded amounts are consistent with those reviews and related bonding requirements. To the extent that planned production on their properties is delayed, interrupted or discontinued because of regulation or the economics of the properties, the future earnings of the Company and Crested would be adversely affected. The Company and Crested believe they have accrued all necessary reclamation costs and there are no additional contingent losses or unasserted claims to be disclosed or recorded.

The majority of the Company's and Crested's environmental obligations relate to former mining properties acquired by the Company and Crested. Since the Company and Crested currently do not have properties in production, the Company's and Crested's policy of providing for future reclamation and mine closure costs on a unit-of-production basis has not resulted in any significant annual expenditures or costs. For the obligations recorded on acquired properties, including site-restoration, closure and monitoring costs, actual expenditures for reclamation will occur over several years, and since these properties are all considered future production properties, those expenditures, particularly the closure costs, may not be incurred for many years. The Company and Crested also do not believe that any significant capital expenditures to monitor or reduce hazardous substances or other environmental impacts are currently required. As a result, the near term reclamation obligations are not expected to have a significant impact on the Company's liquidity.

As of May 31, 2002, estimated reclamation obligations related to the above mentioned mining properties total \$8,906,800. Crested's portion of this obligation is \$748,400, which is reflected on the balance sheet of the Company. The remaining balance of \$7,614,700 is an obligation of USE and its other affiliates, (excluding Crested). The Company is obligated for 50% of any reclamation costs in excess of current estimated reclamation obligations. The Company, however, does not expect that estimated reclamation costs will be exceeded.

The Company and Crested currently have three mineral properties or investments that account for most of their environmental obligations, SMP, Plateau and SGMC. The environmental obligations and the nature and extent of cost sharing arrangements with other potentially responsible parties, as well as any uncertainties with respect to joint and several liability of each are discussed in the following paragraphs:

SMP

The Company and Crested are equally responsible for the reclamation obligations, environmental liabilities and liabilities for injuries to employees in mining operations with respect to the Sheep Mountain properties. The reclamation obligations, which are established by regulatory authorities, were reviewed by the Company, Crested and the regulatory authorities during fiscal 2002 and they jointly determined that the reclamation liability was \$1,496,800. The Company and Crested are self bonded for this obligation by mortgaging certain of their real estate assets, including the Glen L. Larsen building, and by posting cash bonds.

GMMV

During fiscal 1991, the Company and Crested acquired mineral properties on Green Mountain known as the Big Eagle Property. The GMMV also acquired a uranium mill known as the Sweetwater Mill. As part of the settlement of the GMMV litigation with Kennecott in September 2000, the Company was released from any and all reclamation and environmental obligations related to the GMMV except the Ion Exchange Plant. During fiscal 2002, the Company and Crested completed the required reclamation on the Ion Exchange Plant. The reclamation work has been completed and a final report has been submitted to and is being reviewed by the regulatory agencies. No further monitoring of the site is required and no additional reclamation work is anticipated.

SUTTER GOLD MINING COMPANY

SGMC's mineral properties are currently on shut down status and have never been in production. There has been minimal surface disturbance on the Sutter properties. Reclamation obligations consist of closing the mine entry and removal of a mine shop. The reclamation obligation to close the property has been set by the State of California at \$27,800 which is covered by a cash reclamation bond. This amount was recorded by SGMC as a reclamation liability as of May 31, 2002.

PLATEAU RESOURCES, LIMITED

The environmental and reclamation obligations acquired with the acquisition of Plateau include obligations relating to the Shootaring Mill. Based on the bonding requirements, Plateau transferred \$2,500,000 to a trust account as financial surety to pay future costs of mill decommissioning, site reclamation and long-term site surveillance. In fiscal 1997, Plateau requested that the mill be placed on operational status. The NRC increased the reclamation liability to \$6,784,000 as a result of this request. As of May 31, 2002, a cash deposit for reclamation in the amount of \$8,818,600 was held by Plateau's escrow agent to satisfy the obligation of reclamation.

Edgar Filing: US ENERGY CORP - Form 10-K/A

MAY 31, 2002
(CONTINUED)

EXECUTIVE COMPENSATION

The Company is committed to pay the estates of certain of their officers one years' salary and an amount to be determined by the Boards of Directors, for a period of up to five years thereafter. This commitment applies only in the event of the death or total disability of those officers who are full-time employees of the Company at the time of total disability or death. Certain officers and employees have employment agreements with the Company.

L. DISCONTINUED OPERATIONS.

In February 1996, the Company completed the sale of 100% of the 8,267,450 outstanding shares of common stock of Brunton to a third party for \$4,300,000 in accordance with a Stock Purchase Agreement dated January 30, 1996 (the "Purchase Agreement"). The Company received \$300,000 at execution of the Purchase Agreement and approximately \$3,000,000 at closing. The Company has also since been paid in full on the \$1,000,000 balance. In addition, the Company was entitled to receive 45% of the profits before taxes as defined in the Purchase Agreement related to Brunton products existing at the time the Purchase Agreement was executed for a period of 4 years and three months, beginning February 1, 1996. The Company received payments of \$297,100 and \$52,000 for profits in 2001 and 2000, respectively.

During the third quarter of fiscal 2002, the Company made the decision to discontinue its drilling/construction segment. The assets associated with this business segment are being sold and or converted for use elsewhere in the Company. The financial statements for 2001 and 2000 have been revised to present the effect of discontinued operations. There is no material income or loss from discontinued operations from the measurement date to May 31, 2002.

M. SUBSEQUENT EVENT

Subsequent to May 31, 2002, the Company's subsidiary RMG purchased an average 25% net revenue interest and an average 31% working interest in 18 coalbed methane wells drilled on 930 net acres in the Powder River Basin. Thirteen of the 18 drilled wells are currently hooked up and produce at a combined gross rate of 878,000 cubic feet of gas per day (878 mcf) (288 Mcf net rate to our working interest) from the two primary coals on the property: the Cook coal (11 wells) at 650 feet, and the Canyon Coal (2 wells) at 450 feet. One of the 18 wells is used as a water injection well. The purchase price for this property was \$1,300,000 of which \$1,000,000 was paid in cash and \$300,000 in common stock. RMG and CCBM each paid one half of the purchase price by paying \$500,000 in cash and issuance of common stock valued at \$150,000. In the case of RMG, the Company issued 37,500 shares of its common stock for this part of the purchase price. This net rate reflects the average 32.8% working interest (26.2% net revenue interest) in the 13 wells now producing. Our working interest in all the Bobcat acreage is an average of 27.6% (net revenue interest 22%).

REPORT OF INDEPENDENT CERTIFIED
PUBLIC ACCOUNTANTS ON SCHEDULE

To U.S. Energy Corp:

In connection with our audit of the consolidated financial statements of U.S. ENERGY CORP. (a Wyoming Corporation) AND SUBSIDIARIES referred to in our report dated July 18, 2002, which is included in the Company's annual report on Form 10-K, we have also audited Schedule II for each of the years in the period ended May 31, 2002. In our opinion, this schedule presents fairly, in all material

Edgar Filing: US ENERGY CORP - Form 10-K/A

respects, the information to be set forth therein.

GRANT THORNTON LLP

Denver, Colorado
July 18, 2002

90

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE.

Not applicable.

PART III

In the event a definitive proxy statement containing the information being incorporated by reference into this Part III is not filed within 120 days of May 31, 2002, we will file such information under cover of a Form 10-K/A.

ITEM 10. DIRECTORS AND EXECUTIVE OFFICERS OF THE REGISTRANT.

The information required by Item 10 with respect to directors and certain executive officers is incorporated herein by reference to our Proxy Statement for the 2002 Annual Meeting of Shareholders, under the captions "Proposal 1:

Edgar Filing: US ENERGY CORP - Form 10-K/A

Election of Directors," Filing of Reports Under Section 16(a)," and "Business Experience and Other Directorships of Directors and Nominees." The information regarding the remaining executive officers follows:

INFORMATION CONCERNING EXECUTIVE OFFICERS WHO ARE NOT DIRECTORS.

The following are the two executive officers of USE as of the date of this Form 10-K; these persons devote their full time to the Company's business.

ROBERT SCOTT LORIMER, age 51, has been the Chief Accounting Officer for both USE and Crested for more than the past five years. Mr. Lorimer also has been Chief Financial Officer for both these companies since May 25, 1991, their Treasurer since December 14, 1990, and Vice President Finance since April 1998. He serves at the will of each board of directors. There are no understandings between Mr. Lorimer and any other person, pursuant to which he was named as an officer, and he has no family relationship with any of the other executive officers or directors of USE or Crested. During the past five years, Mr. Lorimer has not been involved in any Reg. S-K Item 401(f) listed proceeding.

DANIEL P. SVILAR, age 73, has been General Counsel for USE and Crested for more than the past five years. He also has served as Secretary and a director of Crested, and Assistant Secretary of USE. On March 25, 2002, Mr. Svilar was appointed Secretary of USE. His positions of General Counsel to, and as officers of the companies, are at the will of each board of directors. There are no understandings between Mr. Svilar and any other person pursuant to which he was named as officer or General Counsel. He has no family relationships with any of the other executive officers or directors of USE or Crested, except his nephew Nick Bebout is a USE director. During the past five years, Mr. Svilar has not been involved in any Reg. S-K Item 401(f) proceeding.

ITEM 11. EXECUTIVE COMPENSATION.

The information required by Item 11 is incorporated herein by reference to the Proxy Statement for the 2002 Annual Meeting of Shareholders, under the captions "Executive Compensation" and "Director's Fees and Other Compensation."

92

ITEM 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT.

The information required by Item 12 is incorporated herein by reference to the Proxy Statement for the 2002 Annual Meeting of Shareholders, under the caption "Principal Holders of Voting Securities."

ITEM 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS.

The information required by Item 13 is incorporated herein by reference to the Proxy Statement for the 2002 Annual Meeting of Shareholders, under the caption "Certain Relationships and Related Transactions."

ITEM 14. EXHIBITS, FINANCIAL STATEMENTS, SCHEDULES, REPORTS AND FORMS 8-K.

- (1) The following financial statements are filed as a part of the Report in Item 8:
