Pre-commencement communications pursuant to Rule 13e-4(c) under the Exchange Act (17 CFR 240.13e-4(c))

Item 8.01 Other Events.

Agenus Inc. announced today that the first patient has been dosed in a Phase 1/2 clinical trial of the anti-GITR agonist antibody INCAGN1876. The trial is being conducted by, and in collaboration with, Incyte Corporation. The open-label, dose-escalation portion of the trial will evaluate the safety and tolerability of INCAGN1876 in patients with advanced or metastatic solid tumors and determine the pharmacologically active and/or maximum tolerated dose of INCAGN1876. Part 2 of the trial is planned to further evaluate the recommended dose of INCAGN1876 in selected tumor types, including advanced or metastatic endometrial adenocarcinoma, melanoma, non-small cell lung cancer and renal cell carcinoma.

INCAGN1876 is an agonist antibody targeting the glucocorticoid-induced TNFR-related protein, or GITR. Upon activation, GITR, a co-stimulatory receptor, can stimulate immune cells to target and potentially destroy cancer cells. This antibody was discovered during an earlier collaboration with Ludwig Cancer Research. INCAGN1876 is being co-developed with Incyte Corporation.

The full text of the press release issued in connection with the announcement is attached hereto as Exhibit 99.1 and is incorporated herein by reference.

Item 9.01 Financial Statements and Exhibits.
