Seneca Capital  
JANUARY 21, 2011

2  
DISCLAIMER  
FORWARD-LOOKING STATEMENTS; STATEMENT OF SENECA CAPITAL BELIEFS; FORECASTS  
This  
presentation  
contains  
statements,

including  
Seneca  
Capital s  
beliefs  
as  
to  
valuation,  
which  
are  
forward  
looking  
statements  
about  
future  
events  
and  
sets  
forth  
a  
presentation  
of  
our  
beliefs.

The  
forward-looking  
statements  
are  
not  
guarantees  
of  
future  
performance,  
and  
we  
caution  
you  
not  
to  
rely  
unduly  
on  
them.

You  
should  
be  
aware  
that  
any  
forward-

looking statements are based on certain assumptions and subject to risks and uncertainties that exist in the business

environment  
that  
could  
render  
actual  
outcomes  
and  
results  
that  
are  
materially  
different.

We  
have  
based  
many  
of  
these  
forward-looking statements on our beliefs, expectations and assumptions about future events that may prove to be inaccurate. While we consider these beliefs, expectations and assumptions to be reasonable, they are inherently subject to significant business, economic, competitive, regulatory and other risks, contingencies and uncertainties, most of which are difficult to anticipate and many of which are beyond our control.

We  
caution  
you  
that  
the  
forward-looking  
statements  
are inherently uncertain and necessarily involve risks that may affect Dynegy Inc.'s ( Dynegy ) business prospects and performance,  
causing  
actual  
results  
to  
differ  
from  
those  
discussed

or  
presented  
in  
this  
presentation.

Without  
limiting  
the

generality of the foregoing, Seneca Capital's beliefs as to future value are based on a variety of assumptions as to the future that Seneca Capital believes constitute a reasonable, potential valuation scenario that could develop within the next several years for Dynegy but which are nonetheless subject to risks and uncertainties that exist in the business environment that could render actual outcomes and results materially different than anticipated. Seneca Capital's beliefs as to current value are based on a variety of assumptions, including as to the future, that Seneca Capital believes constitute reasonable assumptions but which are nonetheless subject to risks and uncertainties that exist in the business environment that could render actual outcomes and results that are materially different.

Under-  
performance

AND SERIAL ATTEMPTS TO SELL WITHOUT  
A CAREFUL STANDALONE REVIEW

6

Blackstone Transaction #1 (Aug. 12, 2010 @ \$4.50 per share)

Cash deal at 1/3 of replacement cost at low point in the cycle after sharp and anomalous  
stock price underperformance

Granted exclusive rights to 1/3 of Dynegy assets

\$50mm / \$16mm break-up fees and Blackstone right to match  
Blackstone Transaction #2 (Nov. 16, 2010 @ \$5.00 per share)

Virtually  
unprecedented

Recess  
of  
shareholder

meeting

Additional \$16mm break-up fee in the face of defeat of transaction

Only 26% voted in favor of sale at \$5.00 per share

Post-Blackstone

(Nov.

23,

2010

Dec.

15,

2010)

Poison pill to freeze top shareholders

Abandoned promise to carefully review its standalone restructuring alternatives

Icahn Enterprises Transaction (Dec. 15, 2010 @ \$5.50 per share)

Rushed to sell company for low price (deferred due diligence to post-signing)

Yet another \$16mm break-up fee

Gained pledge of largest holder (IEP) not to support pending consent solicitation for directors

Willing

to

spend

more

than

\$100mm

(15%

of

equity

value)

to

sell

the

company

(1)

(1)

Includes (a) \$16.3 mm break-up fee + \$10 mm expense reimbursement per the Proposed Blackstone Merger, plus (b) \$23 mm per the proposed IEP Merger, plus (d) \$36 mm change of control arrangements.

A DIFFERENCE IN ALIGNMENT  
DRIVES A DIFFERENCE OF OPINION  
VALUE

-

Seller at \$4.50/\$5.00/\$5.50 per share  
(\$0.90/\$1.00/\$1.10 pre-reverse split)

-

Bought nearly 30% of stock in August  
09 from LS Power at \$9.65 per share

Dynegy's capital structure provides very significant flexibility, with limited secured debt and ample liquidity options. Unsecured debt has minimal covenant protections:

No limitation on asset sales

No limitation on restricted payments

No limitation on debt or lien incurrence

No change of control provisions

Facing this flexibility and lack of protections, Dynegy's unsecured debt trades in the market at a substantial discount to its face value:

to

illustrate

the

impact

of

HAPS/MACT rules as some generators will potentially signal costs

of environmental rules

Q2

2011

MISO

Capacity:

MISO

is

likely

to

file

detailed

plans

for

a

PJM-style

capacity

auction with FERC providing an important mechanism to measure EPA rule impacts

16

Given forward dark spreads, we expect that up to 10GW of older/inefficient coal capacity should be retired before the '14/'15 without accounting for EPA-driven retirements

-

Angie Storzynski, Macquarie 1/10/11

We

continue

to

predict

roughly

25,000

MWs

in

PJM

will

have

to

choose  
between  
investing  
in  
environmental  
equipment  
or  
retiring  
[Modeling  
assumptions  
include]

Coal  
units  
under  
400MWs  
with  
no  
scrubber  
installed  
will  
be  
retired.

Also,  
early  
vintage  
scrubbers  
(built  
prior  
to 1985)

will not comply with upcoming EPA regulation.

We assume coal plant retirements from upcoming EPA rules; CATR and HAPS MACT will be phased in over a 3-year time with a 15% effect in the May 2011 auction, a 50% effect in the May 2012 auction, and a 100% effect in the May 2013 auction.

-  
Brian Chin, Citi  
Investment Research 1/18/11

MISO  
will  
likely  
file  
for  
a  
capacity  
auction  
at  
FERC  
in  
2Q,  
with  
an  
auction

in  
early  
13  
for  
the  
13/ 14  
delivery  
period  
At  
MISO,  
we  
primarily  
discussed the likelihood and timeframe for implementation of a formal capacity auction. While vertically integrated regulated utilities are  
relatively averse to the idea, MISO's  
initiative to develop a capacity auction stems from recent deliverability requirements demanded by FERC. As a  
consequence,  
MISO  
has  
indicated  
to  
FERC  
that  
it  
intends  
to  
make  
a  
formal  
tariff  
filing  
for  
a  
capacity  
auction  
by  
2Q11.  
The  
first  
auction  
is  
anticipated  
to  
take  
place  
in  
early  
2013,  
for  
delivery  
in

the  
2013/2014  
delivery  
year  
(June  
1st  
2013

May  
31st  
2014).

-

Julien

Dumoulin-Smith, UBS 12/23/10 (After a December trip that included a meeting with MISO)

exist

such that actual performance may deviate materially from Seneca Capital s forecasts (see page 2 for full disclaimer).

MARKET PARTICIPANTS HAVE  
BEGUN TO TAKE NOTICE

If shareholders reject the BX revised offer, we believe a newly composed board and new management will likely take a rational, long-term and creative approach to breaking up the company (potentially taking several years) and realize a value closer to our \$9 per share break-apart value.

-

Charles Fishman, Pritchard Capital Partners, 11/17/10

18

Icahn's recent proposal to refinance DYN's credit facilities under amended terms should assuage concerns over the liquidity impact of asset sales/maintenance covenants. Seneca also recently proposed an additional four new board members,

all  
of  
whom  
have  
highly  
relevant  
backgrounds,  
including

a  
former  
senior  
rail  
executive

We  
have  
incorporated

DYN's latest disclosures into our projections, adjusting our EBITDA outlook and increasing our cash flow burn through 15 to \$2.3 Bn. In contrast, DYN's sizeable operational and financial leverage could push equity value to \$12/sh on a power recovery and debt restructuring to mrkt value.

-

Julien Dumoulin-Smith, UBS 11/16/10

I believe that, even at \$5.00 per share, the proposed Blackstone acquisition undervalues Dynegy. Today's \$.50 per share

increase,  
coming  
only  
one  
day  
after  
Blackstone  
stated

that  
the  
\$4.50  
price  
is

a  
full  
and  
fair  
valuation  
reassures

my  
belief that the Dynegy/Blackstone transaction leaves too much shareholder value on the table for Blackstone. I have also considered that in a November 15, 2010 report JP Morgan stated that it is introducing a December 2011 price target of \$7, up from our prior December price target of \$5.00.

-  
Carl Icahn, 11/16/10 (In a statement filed with the SEC on a Schedule 13D/A)

REJECTING THE TENDER IS THE  
ENABLING EVENT

Do not tender your shares for \$5.50 / share

WRONG PRICE at the WRONG TIME for the WRONG REASONS

We believe Dynegy is worth \$7.50 -

\$8.50 per share today and \$18-\$20 per share

in a recovery valuation -

trading at less than 1/3 of its replacement value

Board rushed to sell the company BEFORE conducting promised careful standalone review

\$36mm management change of control severance payments and a Board that

has purchased only 16,000 shares creates misalignment with shareholders

Dynegy is the premier vehicle to participate in a power market recovery with substantial value creation levers independent of commodity prices

Industry leading leverage to EPA-driven retirements (validated by Ventyx model)

Positive asymmetric exposure to natural gas

Flexible debt structure reflected in ~\$7/sh market value discount of debt

Big 4 Accounting Firm validated cost cutting potential

19

Defeat of Tender Can Enable Investors to Participate in Dynegy Value Creation

Disclaimer: Seneca Capital's beliefs regarding current and future value are based upon assumptions, including as to the future risks and uncertainties exist such that actual performance may deviate materially from Seneca Capital's forecasts (see page 2 of Report).

APPENDIX  
20

EPA CLEAN AIR RULES CAN  
CHANGE MARKET DYNAMICS

Upcoming EPA rules may force coal generators to either invest in expensive control technologies or shut down

Stringent Maximum Achievable Control Technology (MACT) Rules could require compliance as early as 2014

Environmental controls can be expensive and unlikely for many plants if

the current power price environment persists

(1)

Pursuant to the Midwest Consent Decree, Dynegy will have spent \$730 mm (out of a total of \$960 mm) of environmental capital expenditures for the Midwest fleet by the end of 2010 and will have substantially completed its environmental capital expenditure program by 2013.

**EPA RULES: HAZARDOUS AIR  
POLLUTANT HAPS/MACT**

The Clean Air Act requires the EPA to develop an emission control program for hazardous pollutants, including mercury and acid gases

The EPA is mandated pursuant to consent decree to draft a proposed Maximum Achievable Control Technology (HAPS/MACT) rule as soon as March 16, 2011 and to finalize it as soon as November 16, 2011

HAPS/MACT rule will apply to all existing and future coal and oil fired capacity  
HAPS/MACT requires achieving emissions levels as good as the average of the  
top 12% of existing representative sources

Credit Suisse estimates that for mercury emissions, this could require a 90% removal  
rate

Affected plants would have 3 years to comply (i.e., 2014 or 2015), assuming no  
case by case waivers or an exemption granted by the President

In

a

more

moderate

scenario,

the

EPA

could

propose

different

sets

of

standards

based on sub-categories, such as:

Size

Boiler pressure / temperature

Coal mix

No trading between plants

22

CREDIT SUISSE MID-CASE FOR  
COAL PLANT RETIRMENTS

According to Credit Suisse, 66% of the coal capacity in the US have NOT installed (or announced plans to install)

both  
scrubbers  
and  
SCRs  
and  
30%  
have

no  
environmental  
controls at all

Smaller coal plants are less likely to invest in environmental controls as the capital cost is significantly

higher  
on

a  
\$

/

kw  
basis.

More  
than

50

GW

of  
small

coal  
plants

have

no

environmental controls installed

Credit Suisse base case assumes that 60GW of coal capacity will be retired including all units below 300MW without any pollution control equipment

cost  
estimates  
are  
per  
Credit  
Suisse  
report Growth  
from  
Subtraction  
dated September 23, 2010.

Dynegy is extremely well positioned to benefit from EPA Clean Air rules given its substantial investment in pollution control equipment

Its largest, most efficient plants will have been scrubbed

We estimate pollution control equipment for Dynegy's coal fleet will have a replacement value of more than \$1.7bn upon completion

A  
MAJOR  
COMPETITIVE  
ADVANTAGE

Presentation,  
Q2 10

**BIG 4 ACCOUNTING FIRM  
COST STUDY**

A Big 4 accounting firm analyzed Dynegy's public data to determine a baseline level of costs, for which they utilized Dynegy's LTM financial results as of Sept. 30, 2010

O&M Costs

SG&A Costs

Cost of sales / fuel procurement

Analyzed public disclosures of selected relevant public comparable companies to determine industry benchmarks for each cost category

GenOn, NRG Energy, Calpine, Constellation, AES and Public Service Enterprise Group

Compared Dynegy results to comparable company benchmarks in order to determine where cost savings

would

be

possible

within

Dynegy

relative

to

its

baseline

cost

level

in

a

base

case

and

in

a

stretch case

Reviewed financial forecasts from Dynegy's preliminary proxy statement (January 10, 2011) to determine cost levels assumed by management, including cost savings plans already announced and being implemented by management

Used gross margin less Adjusted EBITDA as a proxy for SG&A + O&M

costs

Compared baseline level of costs and total savings potential to 2012-2015 forecast period and 2013-2015 forecast period costs to determine incremental savings potential for Dynegy for 2011+

\$16 mm of potential incremental savings in base case

\$103 mm of potential incremental savings in stretch case

25

Disclaimer: Big 4 Report has been provided in preliminary form, and notes further investigation, validation and diligence is required. This report is not intended to be used as a substitute for an audit, examination or review in accordance with standards established by the American Institute of Certified Public Accountants. The auditors have not verified the information obtained or presented in their report.

#### VENTYX POWER ANALYSIS

Ventyx (Energy Velocity) calculated a dynamic plant-by-plant fundamental production cost model based on their Fall Reference Case that integrates commodity price assumptions, resource additions and retirements

Load forecast based on utility filings

Build-out of all known and reasonably foreseeable transmission projects

Renewable additions to meet existing state standards

MISO and PJM capacity payments reach Cost of New Entry assumptions when reserve margins drop below 15%

Coal and transportation costs are based on Ventyx Coal Sub-Module that utilizes a least cost algorithm that includes variable cost of coal producers and different modes of transport

Natural gas prices based upon NYMEX strip as of January 5, 2011

Plant-level assumptions for heat rates, capacity factors and O&M are based on

Ventyx's Energy Velocity database (based on FERC data where available)

Applied Credit Suisse Mid-Case

(1)

(60GW of retirements) MACT retirement assumptions

Retirement of coal fired units smaller than 300MW without environmental controls

Compliance with all other existing environmental legislation (CATR, RGGI, EPA Tailoring Rule, etc.)

#### VENTYX BIOGRAPHY

Ventyx is a business solutions provider offering software, data and advisory services to energy, utility, communications, and other asset-intensive commercial industries. Ventyx was formed in 2007 by the merger of MDSI and Indus International and the acquisition of Global Energy Decisions and New Energy Associates during that same year. Each of these companies traces their roots to the 1970 s and have been providing clients in the energy sector with energy

planning, decision support, energy trading and operations solutions. In 2010 Ventyx was purchased by ABB, a global leader in power and automation technologies.

The Ventyx Advisory Services Practice, which performed part of the analysis in this presentation, traces its roots to the legacy Global Energy Decisions and New Energy Associates companies. The keystone product of the Ventyx Advisors Practice is the Ventyx Reference Case which is a semi-annual forecast of North American power and fuel markets. The Ventyx reference case is utilized by utilities, power generators, investment bankers and market regulators as an independent view of the current and expected state of power and fuel markets. Over the lifetime of this product offering the Ventyx reference case has become widely recognized with a large subscriber base.

**KEY DCF VALUATION  
ASSUMPTIONS**

All DCF-based valuation metrics used in the Sum Of the Parts valuation on page 8 and elsewhere in this presentation included the following assumptions:

Capacity factors based on historical plant-by-plant data and management guidance from public presentations

Strip gas prices through 2015 as of 10/29/10 with a flat \$6 long-term natural gas price thereafter

Long-term CAPP coal of \$70/ton and PRB of \$12.50/ton

Increased coal transportation costs upon contract expiration

Near
