Entergy Forward-Looking Information
Entergy Forward-Looking Information
In
this
communication,

and
from
time
to
time,
Entergy
makes
certain

forward-looking
statements
within
the

meaning of the Private Securities Litigation Reform Act of 1995.

Except to the extent required by the federal

securities laws, Entergy undertakes no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events, or otherwise. Forward-looking statements involve a number of risks and uncertainties. There are factors that could cause actual results to differ materially from those expressed or implied in the forward-looking statements, including (i) those factors discussed in Entergy's Annual Report on Form 10-K for the year ended December 31, 2011, its Quarterly Reports on Form

10-Q for the quarters ended March 31, 2012, June 30, 2012 and September 30, 2012, and other filings made by Entergy with the Securities and Exchange Commission (the "SEC"); (ii) the following transactional factors (in addition

to
others
described
elsewhere
in
this
communication,
in
the
preliminary
proxy
statement/prospectus

included in the registration statement on Form S-4 that ITC filed with the SEC on September 25, 2012 in connection with the proposed transactions, and in subsequent securities filings) involving risks inherent in the contemplated transaction, including: (1) failure to obtain ITC shareholder approval, (2) failure of Entergy and its shareholders to recognize the expected benefits of the transaction, (3) failure to obtain regulatory approvals necessary to consummate the transaction or to obtain regulatory approvals on favorable terms, (4) the ability of Entergy, Mid South TransCo LLC (TransCo) and ITC to obtain the required financings, (5) delays in

consummating
the
transaction
or
the
failure
to
consummate

the
transaction,
(6)
exceeding
the
expected

costs of the transaction, and (7) the failure to receive an IRS ruling approving the tax-free status of the transaction; (iii) legislative and regulatory actions; and (iv) conditions of the capital markets during the periods covered by the forward-looking statements. The transaction is subject to certain conditions precedent, including regulatory approvals, approval of ITC's shareholders and the availability of financing. Entergy cannot provide any assurance that the transaction or any of the proposed transactions related thereto will be completed, nor can it give assurances as to the terms on which such transactions will be consummated.

ITC Forward-Looking Information

ITC Forward-Looking Information

This document and the exhibits hereto contain certain statements that describe ITC Holdings Corp. (ITC) management 's beliefs concerning future business conditions and prospects, growth opportunities and the outlook for ITC 's business, including ITC 's business and the electric transmission industry based upon information currently available. Such statements

are forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. Wherever possible, ITC has identified these forward-looking statements by words such as anticipates, believes, intends, estimates, expects, projects and similar phrases. These forward-looking statements are based upon assumptions ITC management believes are reasonable. Such forward-looking statements are subject to risks and uncertainties which could cause ITC's actual results, performance and achievements to differ materially from those expressed in, or implied by, these statements, including, among other things, (a) the risks and uncertainties disclosed in ITC's annual report on Form 10-K and ITC's quarterly reports on Form 10-Q filed with the Securities and Exchange Commission (the SEC) from time to time and the following transactional factors (in addition to others described elsewhere in this document, in the preliminary proxy statement/prospectus included in the registration statement on Form S-4 that ITC filed with the SEC on September 25, 2012 in connection with the proposed transactions, and in subsequent filings with the SEC): (i) risks inherent in the contemplated transaction, including: (A) failure to obtain approval by the Company's shareholders; (B) failure to obtain regulatory approval necessary to consummate the transaction or to obtain regulatory approvals on favorable terms; (C) the ability to obtain the required financings; (D) delays in consummating the transaction or the failure to consummate the transactions; and (E) exceeding the expected costs of the transactions; (ii) legislative and regulatory actions, and (iii) conditions of the capital markets during the periods covered by the forward-looking statements.

Because ITC's forward-looking statements are based on estimates and assumptions that are subject to significant business, economic and competitive uncertainties, many of which are beyond ITC's control or are subject to change, actual results could be materially different and any or all of ITC's forward-looking statements may turn out to be wrong. They speak only as of the date made and can be affected by assumptions ITC might make or by known or unknown risks and uncertainties. Many factors mentioned in this document and the exhibits hereto and in ITC's annual and quarterly reports will be important in determining future results. Consequently, ITC cannot assure you that ITC's expectations or forecasts expressed in such forward-looking statements will be achieved. Actual future results may vary materially. Except as required by law, ITC undertakes no obligation to publicly update any of ITC's forward-looking or other statements, whether as a result of new information, future events, or otherwise.

The transaction is subject to certain conditions precedent, including regulatory approvals, approval of ITC's shareholders and the availability of financing. ITC cannot provide any assurance that the proposed transactions related thereto will be completed, nor can it give assurances as to the terms on which such transactions will be consummated.

3

3

Additional Information and Where to Find It

Additional Information and Where to Find It

On September 25, 2012, ITC filed a registration statement on Form S-4 (Registration No. 333-184073) with the SEC registering shares of ITC common stock to be issued to Entergy shareholders in connection with the proposed

transactions,
but
this
registration
statement
has
not
become
effective.

This
registration
statement

includes a proxy statement of ITC that also constitutes a prospectus of ITC, and will be sent to ITC shareholders.

In addition, Mid South TransCo LLC (TransCo) will file a registration statement with the SEC registering TransCo common units to be issued to Entergy shareholders in connection with the proposed transactions. Entergy shareholders are urged to read the proxy statement/prospectus included in the ITC registration statement and the proxy statement/prospectus to be included in the TransCo registration statement (when available) and any other relevant documents, because they contain important information about ITC, TransCo and the proposed transactions. ITC shareholders are urged to read the proxy statement/prospectus included in the ITC Registration Statement and any other relevant documents because they contain important information about TransCo and the proposed transactions. The proxy statement/prospectus and other documents relating to the proposed transactions (when they are available) can be obtained free of charge from the SEC's website at www.sec.gov. The documents, when available, can also be obtained free of charge from Entergy upon written request to Entergy Corporation, Investor Relations, P.O. Box 61000, New Orleans, LA 70161 or by calling Entergy's Investor Relations information line at 1-888-ENTERGY (368-3749), or from ITC upon written request to ITC Holdings Corp., Investor Relations, 27175 Energy Way, Novi, MI 48377 or by calling 248-946-3000.

This communication is not a solicitation of a proxy from any security holder of ITC. However, Entergy, ITC and certain of their respective directors and executive officers
and certain other members of management and

employees may be deemed to be participants in the solicitation of proxies from shareholders of ITC in connection with the proposed transaction under the rules of the SEC. Information about the directors and executive officers of Entergy, may be found in its 2011 Annual Report on Form 10-K filed with the SEC on February 28, 2012, and its definitive proxy statement relating to its 2012 Annual Meeting of Shareholders filed with the SEC on March 23, 2012.

Information about the directors and executive officers of ITC may be found in its 2011 Annual Report on Form 10-K filed with the SEC on February 22, 2012, and its definitive proxy statement relating to its 2012 Annual Meeting of Shareholders filed with the SEC on April 12, 2012.

through transition
to MISO RTO

Illustrative

Rates have been estimated using 12 CP methodology used under MISO Attachment O. Current ETR OATT methodology uses a single annual peak rather than 12 CP. Change in methodology does not imply a change in Revenue Requirements hence customers do not pay different amounts under 12 CP employed by MISO vs. single annual peak employed by ETR. The equivalent number to \$2.43 /kWh under 12 CP would be a \$1.85 /kWh under single annual peak. The per unit estimation may be different but the amount paid by the customer is the same.

Reliability

23

23

Data from the SGS Study benchmarking study can be used to quantify the resulting improved reliability

Operational Excellence:

Operational Excellence:

Quantitative Value of Reliability

Quantitative Value of Reliability

The calculation is based on data for the two largest load serving entities in Michigan from 2010 and 2011, with major storms e and METC data reflect a three year average SAIDI from the SGS Study, given that performance changes year over year.

The U.S. Department of Energy's Office of Electricity Delivery and Energy Reliability has developed a tool to estimate interruption costs and the benefits associated with reliability improvements

A one minute improvement in System Average Interruption Duration Index (SAIDI) for ITC Transmission and METC results in one year savings of \$7.7M

Compared to the performance of the median utility in the SGS Study, this amounts to a value of about \$153 million per year delivered by ITC's Michigan utilities

24

24

Utilize standard equipment when possible to drive greater efficiencies (e.g. breaker replacement completed in two versus six weeks)

Utilize equipment with track record of longer life, resulting in lower maintenance and replacement costs

Engage in strategic alliances to ensure that needed equipment is available to meet project timelines

Purchasing power leads to better pricing when buying large volume of transmission equipment

Cost Efficiencies

Cost Efficiencies

Standardization and Specialization

Standardization and Specialization

Ability to attract and retain personnel with high levels of interest and expertise in electric transmission avoids turnover and training costs (important when facing near-term shortage of skilled workers)

25

25

25

Customer Focus

Customer Focus

Dedicated Stakeholder Relations group for all stakeholders,

providing advocacy and issue resolution at ITC

Stakeholders include investor-owned, municipal and cooperative utilities, independent power producers and retail load of large industrial and commercial retail customers connected at transmission level voltages

Proactively meet with stakeholders to identify stakeholder issues and resolve any concerns through one-on-one meetings and semi-annual

Fosters Regional Planning

Fosters Regional Planning

ITC has track record of planning its transmission systems to:

Address local, state, and regional reliability needs

Increase the economic efficiency of the overall grid

Respond to transmission needs identified in state and regional processes

When deficiencies are identified on the transmission system, such as inadequate capacity to meet load under certain contingency conditions, ITC's transmission planners develop transmission system reinforcements to address those deficiencies

ITC is committed to planning its transmission system in an open and transparent manner. As such, ITC has its own processes that supplement the already-robust open and transparent processes used by MISO

Transaction enhances customer benefits beyond what could be achieved through the Entergy Operating Companies proposed MISO membership

ITC has proven it has the expertise, resources, and capital not only to plan but also to construct needed investment

ITC's regional approach to transmission planning will enhance deliverability of generation throughout the region to provide a more economic source of energy for customers

28

28

28

IPL Transaction Experience & Results

IPL Transaction Experience & Results

ITC has invested approximately \$1.1 billion to improve the ITC

Midwest transmission system since acquisition of IPL assets

Primarily needed to upgrade and improve existing lines and substations, construct new lines to serve load growth and improve reliability, and provide interconnection for new load and generation

Major activities:

Built 26 new substations

Completed 32 major substation upgrades/expansions

Built nearly 26 miles of new line

Rebuilt nearly 400 miles of existing lines

Added four and replaced three major transformers

Key Project: Salem-Hazleton

ITC Midwest reduced sustained outages from those experienced in 2008 (the last year IPL operated and maintained the system) by 50% in 2009, 24% in 2010, and 58% in 2011

81-mile, 345 kV line connecting Dubuque and Buchanan

Counties in eastern Iowa

Regional planning had long identified as needed to resolve system constraints and reduce energy costs.

Expected completion: 2013

36

Financial Strength and Flexibility

Financial Strength and Flexibility

Transaction offers the financial strength of ITC and improves that of EAI to support the escalating capital investment requirements facing the electric

industry

ITC has a singular focus with no internal competition or competing priorities for capital or other resources; provides a stronger, separate balance sheet to support the transmission capital requirements

ITC better positioned to efficiently capitalize the significant and sustained level of transmission investment required in the Entergy region, including Arkansas

Post-close, EAI would be better positioned to attract capital separately to finance needed

investments

in

generation

and

distribution

at

lower

costs

and

to

manage

future uncertainty regarding event risk (e.g., new regulatory requirements or major storms)

ITC's MISO operating companies are deemed to be of higher credit quality than EAI, as well as most vertically-integrated utilities

Enables consistent and predictable access to cost-effective capital, even during challenging economic times; supports enhanced liquidity

Given significant and sustained level of transmission capital investment requirements, as well as unforeseen needs, credit quality and access to capital are paramount

37

37

37

Credit Quality Enhancement Overview

Credit Quality Enhancement Overview

Debt Cost Savings

Debt Cost Savings

FERC rate construct utilized by ITC's operating companies viewed favorably by the rating agencies and investors, which supports lower funding costs

ITC is seeking FERC rate construct for its new operating companies as part of this transaction

Results in lower borrowing costs of approximately 55 bps to 195 bps relative to the status quo EOCs, depending on market conditions

Reflected in both the initial capitalization of the new ITC operating companies, including ITC Arkansas, as well as future debt financings to fund transmission investment requirements

Aggregate debt financing cost savings estimated in the range of \$24 million to \$27 million in 2014 (first full year of ownership) for the new ITC operating companies

Over a five-year period (2014-2018), estimate debt cost savings for the new ITC operating companies in a range of approximately \$125 million to \$156 million (in nominal dollars)

Expect new ITC operating companies to have ratings equivalent to that of ITC's existing MISO operating companies

Merger between Entergy's Transmission Business and ITC is expected to lead to material interest expense savings, which will benefit Entergy's customers

ITC
stock
will
be
issued
to
Entergy
shareholders
in
exchange
for
their
shares
of
the
Entergy
Transmission Business in a stock-for-stock merger

Sufficient shares issued for Entergy shareholders to own 50.1% of the combined business

ITC will also assume \$1.775 billion of debt to be issued by Entergy Transmission Business

Immediately prior to close, ITC will effectuate a \$700 million recapitalization to align ITC's equity value with that of Entergy's Transmission Business

Post-recapitalization, the number of shares issued to Entergy shareholders will be determined by the exchange ratio which can generally be calculated by multiplying (i) ~1.0x by (ii) the # of ITC shares on an agreed upon date approximately 20 trading days prior to close

Goodwill will be calculated as the difference between the consideration transferred at closing and the fair value of net assets acquired and liabilities assumed at close

It is not possible to exactly estimate goodwill at closing as it depends on the following variables:

ITC's stock price at closing

The exact # of shares to be issued to Entergy shareholders at closing

The fair value of the net assets acquired and liabilities assumed at closing

Irrespective of the amount of goodwill

estimated
at
closing,
ITC
will
not
seek
recovery
of
any
goodwill
associated with the transaction

Customer rates will in no way be impacted by any goodwill associated with the transaction
