LETTER FROM THE CHAIRMAN

AND THE CHIEF EXECUTIVE OFFICER

Dear Shareholder

It is with profound sadness that we begin this communication to you by reflecting on the underground Mponeng mine that claimed the lives of 19 workers on the night of 29 July. We have committed your full support of a government inquiry, already under way, and are confident that every effort will be made to determine the cause of this tragedy, together with ways to prevent any recurrence in the future. It is most important that the lessons learned are embodied in the company's extensive **Zero** Tolerance safety campaign launched recently, extending our deepest condolences to the families of the men who died, we are mindful of the need to ensure their future well-being. The Board has asked management to identify, in discussion with the representatives of the most appropriate means of assisting not only these families but those of all workers who die at AngloGold mines.

In the first six months of 1999 - a period during which the gold price first traded in the \$278 to \$280 range, then plummeted to a 20-year low

AngloGold has produced creditable improvements in performance, compared with the same period last year.

Operating profit increased by 47% to R1, 6 billion and headline earnings before deferred tax adjustment

to R1 billion, giving a return on shareholders' equity (including deferred tax) of 16%, compared with 10% for the same period last year.

The company has been well served by its hedging activities, reporting a received price for the six months period compared with a spot price of \$280. This received price is, nevertheless, significantly lower than

the equivalent period last year.

A dividend of 900 cents per share (compared to 750 for the first half of 1998) has been declared. This represents a dividend yield of 7% annualised, thus maintaining our reputation as a high income

company's sound performance is reflected in its share price, compared with the FTSE gold index, shown in the graph below.

The South African mines have had a difficult six months. The Elandsrand, Deelkraal, Savuka and Ba all experienced production problems of various kinds and the Matjhabeng mine lost more than one t production in the aftermath of the severe earthquake which occurred in April. We intend to provid

resources to these mines, which comprise 85% of the company's business, and this is expected to c improved performance.

The North American mines also had a slower than anticipated start, though production has picked u quarter and costs have been well controlled. In contrast, the South American mines have had an ex production up and costs down. This is true also of the Sadiola mine in Mali. The diversity of Ang demonstrates the ability of the company to cope with the inevitable adversities of individual min

The medium-term prospects for AngloGold are closely linked to those of the gold price. Our existi allow the company to realise prices in the second half of this year similar to those of the first

price remains at its present two-decade low.

Present price levels are frustrating, as the last quarter has seen strong growth in almost all ph

Edgar Filing: ANGLOGOLD LTD - Form 6-K

South Korean and South East Asian demand increased by 50%, the Japanese market by 80% and the United Kingdom by 17%, while India recovered from a weak first quarter.

However, physical demand is taking second place at the moment to the speculation that most central banks, in the foreseeable future, sell most of their gold. Indications from the US Federal Reserve and the European Central Bank suggest that neither of these important holders intends reducing the 21 000 tonnes they hold. Some of the issues to be brought to the debate on the future gold management policies of central banks and other official holders of gold.

SOUTH AFRICAN OPERATIONS

Overall performance

The performance during the second quarter reflected the impact of the severe earthquake measuring 4.6 on the scale that struck the Free State goldfields on 23 April. Although all four of Matjhabeng's shafts were affected, the shaft that bore the brunt of the damage. This shaft is scheduled to return to full production in October this year.

Gold production at 44,6 tonnes (1 433 248 ounces) was 0.9 tonnes (28 421 ounces), 2% less than the first quarter. Production was 1.1 tonnes below expectations but this was offset by improved performances at Mponeng, Savuka and Elandsrand. In line with expectations, the exceptional performances recorded at Great Noligwa and Kopanang in the March quarter were not sustainable.

In order to maintain full capacity at the metallurgical plants in the face of diminished reef tonnage, surface processing was substituted, resulting in a slight lowering of the yield (1%). Productivity, in grams per employee, fell by 1% in the second quarter, mirroring the lower performance.

Cash operating costs were maintained at previous levels in absolute terms, but showed a slight increase in unit terms (2%) to end at R43 717 per kilogram or \$222 per ounce.

A 1% improvement in the gold price received partially offset the reduced revenue from lower production. Consequently, operating profit fell by R31 million.

Earnings for the second quarter were increased by R543 million from the proceeds of R1 314 million received in the first quarter of the sale of the company's 21.5% interest in Driefontein.

Mine performance

Great Noligwa, as expected, has not been able to sustain the high grade and consequent gold output of the previous quarter. Its production has also been impacted by an earlier than planned intersection of the Jersey fault with the reef, resulting in subsequent loss of some high-grade panels. A fire experienced in early July will not have any significant impact on production for the third quarter.

Management focus on vamping and tramming operations at **Kopanang**, together with improved tonnage from stoping, has generated above targeted results. These were below the March quarter achievements, however.

Tau Lekoa's good production performance continued during this quarter. The lower grade was a result of the transfer of material from the Weltevreden dump.

Ergo produced another steady set of results for the quarter. Oil heaters in the elution section caught fire on 15 July, which has interrupted production. At present, the gold inventory is being increased and the effect on the third quarter will be negligible. It is anticipated that **Ergo** will meet its gold target for the year.

A recent power failure, together with two fires, at **Bambanani** have meant that the focus on face advance and infrastructure has not yet generated the intended improvements in tonnage and gold production. Plans are afoot to return the underground operations back to targeted production levels.

The increased output of gold at **Tshepong** can be ascribed to the concentrated efforts on backlog sweepings and vamping operations. It is anticipated that this production level will be maintained.

In addition to the earthquake's effect at Eland shaft, **Matjhabeng** has also been impacted by a lock-up of underground ore at Nyala shaft. Problems with grade at the three operating shafts are hampering efforts to minimise the grade impact.

The lower production at **Joel** resulted from a gold lock-up in the mills and underground operations. The mill lock-up has now been resolved and consequently, the pulp grade is back on target.

TauTona's centares mined and average yield are showing some encouraging trends, but volume remains under pressure. This is impacting on the mine's ability to produce at its full potential.

Edgar Filing: ANGLOGOLD LTD - Form 6-K

Production is still being hampered by an inability to mine in the shaft pillar area at **Savuka** following the s in the tertiary shaft in October last year. Despite this constraint, **Savuka** was able to post improved gold pr results for the quarter.

With face length now available, centares and grade improved at **Mponeng**. Together with focused effort on plant up, this resulted in a significant increase in gold production.

An increased focus on grade at **Elandsrand** resulted in the suspension of **some** lower grade panels. This led to shortfall in underground tonnage but had a favourable impact on recovered gold.

Edgar Filing: ANGLOGOLD LTD - Form 6-K

Deelkraal is still being hampered by a lack of face availability, which has necessitated the schedule surface dump material.

Projects

The shaft sinking at Joel has reached 121 level (1 212 metres below surface) and station development is in progress.

Expenditure on this project of R12 million was some R5 million below the March quarter.

Progress on the Mponeng deepening project has been good. At present, sinking operations have reached 3 402 metres below surface) and station development is in progress. Capital expenditure for the R35 million was R12 million higher than the previous quarter.

The Moab Khotsong project continues to progress well and capital expenditure at R77 million was R10 million higher than the March quarter.

The carbon technology projects at West Wits are ahead of schedule and within targeted expenditure. Capital expenditure at R17 million was R7 million higher than the previous quarter.

INTERNATIONAL OPERATIONS

Other African operations

These operations comprise AngloGold's 38% interest in Sadiola mine in Mali and the 70% interest in the Namachab mine venture in Namibia.

In respect of most key second quarter production parameters, both operations have outperformed the plan. Replanning at Sadiola permitted higher grades to be accessed earlier and at Navachab the effects of the reported slope stability problems have been largely overcome.

At Sadiola, in terms of production and operating costs, it is unlikely that the exceptionally high costs of the first quarter, which resulted in direct cash costs of \$102 per ounce, can be sustained. A modest shortfall in production should be recovered in the next period. The additional stripping associated with the pit extension programme will continue to exercise pressure on the interim profitability margins.

At Sadiola, negotiations progressed well to resolve the two issues reported previously, namely, the upgrading of the power station's diesel engines/generator sets, where performance since commissioning has been disappointing, and the interpretation differences with the authorities on several Mali tax and duty clauses in the operating agreement. It is expected in the third quarter at the forecast costs, for which provision has been made.

An updated mineable reserve model for Sadiola has confirmed a life of mine, at reduced gold prices, to the end of 2004 with some additions very likely as a result of extension drilling and exploration in the current period.

The relocation of both Sadiola and Farabakouta villages has been successfully carried out and serves as a model for other operations of its kind.

The safety and health programme at Sadiola was subjected to external audit during the last quarter and has achieved a four-star NOSA rating.

The pre-feasibility and trade-off studies for the potential Yatela project north-west of Sadiola are well advanced. The project team will advance the study to bankable level, based on a 2, 5-million-tonnes-a-year production target. The results will be clear by year-end.

Exploration programmes continued throughout Mali, Senegal, Tanzania and Botswana. During the last quarter, the venture drilling programme with Cluff Mining began in the southern part of the Democratic Republic of the Congo. Exploration in Tanzania remains concentrated on the area around southern Lake Victoria which contains significant gold potential.

Edgar Filing: ANGLOGOLD LTD - Form 6-K

encouraging results for an AngloGold-sized project.

American operations

Integration of the AngloGold interests in the American operations, as well as of the associated exploration a

the AngloGold global business has been largely achieved and synergies, particularly with respect and technical expertise, established.

Overall, the second quarter outperformed the first and production targets were met.

Edgar Filing: ANGLOGOLD LTD - Form 6-K

North America

These operations comprise AngloGold's 70% interest in the Jerriitt Canyon joint venture in Nevada (100% interest in production ounces subject to contract obligations) in the Cripple Creek and Victor Colorado.

Jerriitt Canyon maintained the good production performance of the first quarter. Production was held at levels in order to offset the shortfalls at Cripple Creek and Victor, resulting in accelerated development of the pit. This ore source is thus reduced for the next period. Nevertheless, the mine outlook for the second quarter with respect of ounces and cash costs, with the latter at around \$185 per ounce.

Employee productivity improved slightly in the second quarter and no lost time injuries occurred during this period.

The new Murray and SSX underground truck fleet was put into service late in the second quarter. The development of the new MCE mine exceeded expectations.

The annual maintenance turnaround of the roaster was completed as scheduled and included installation of a compliant mill process control system. Toxic Release Inventory (TRI) reporting was completed under the new Federal requirements.

With a slow start to the year as previously reported, Cripple Creek and Victor began the expected production recovery. Despite heavy snows in April/May, gold production was up 16% on the first quarter. Though still below target due to lower leach solution grades arising from ore stacking and leaching delays, the outlook for the second quarter recovery in ounces at an expected cash cost of around \$165 per ounce.

Employee productivity improved in the second quarter with one lost time injury occurring during the period.

Crushed tonnes placed improved while run of mine ore tonnages exceeded expectations. TRI reporting was completed under new Federal requirements, and leach pad extension construction proceeded as planned.

East Cresson mine development began during the second quarter following regulatory approval of Amendment No. 1 in January.

Exploration at both operating sites and on additional ground in Nevada continued as planned.

South America

These operations comprise AngloGold's 100% interest in the Morro Velho mines and 50% interest in the Cerro Vanguardia mines, both in Brazil, as well as the 46.25% interest in Cerro Vanguardia in southern Argentina.

The operations in Brazil enjoyed an excellent production quarter, outperforming the previous period in respect of ounces produced and cash costs achieved.

At Cerro Vanguardia, gold production for the quarter was lower than that for the first quarter, during which the previously accumulated higher grade material in stockpiles had been treated. Although an improvement in the second quarter, silver production delivered disappointing yields. Efforts continue to remedy the previous commissioning plant performance problems at Cerro Vanguardia.

Related to the complexity of the ore type at Cerro Vanguardia, the plant throughput capacity is fixed (not amenable to further expansion) but the optimisation of reagent usage and cyanide recycle is providing a positive outlook.

Although not yet achieved, progress is evident. This negatively affected cash costs, which were \$185 per ounce in the first quarter. Despite this, the mine has successfully met the operational requirements for the Senior Management Review.

Completion Tests and application for the certificate is under review by the responsible consultants.

Edgar Filing: ANGLOGOLD LTD - Form 6-K

Safety performance as measured by accident frequency rates was better at all operations, with room for further improvement.

South American exploration, both on the existing mine exploitation areas and elsewhere in Brazil continued as planned. AngloGold exploration companies in both Venezuela and Peru should be active the company is evaluating an increasing number of approaches to form alliances or acquire opportunity on the continent.

Edgar Filing: ANGLOGOLD LTD - Form 6-K

Circumstances in the gold market changed materially during the second quarter of 1999 with the announcement on 7 May of the United Kingdom's intention to sell 415 tonnes out of 715 tonnes of official gold reserves over a number of years, starting on 6 July 1999. This method of pre-announcement and sale by public auction, with the nature of the traded market in gold, which operates much like a currency market where volume of trade substantially outweighs the flows of the underlying currency or metal. The pre-announcement led to speculation by speculators in that derivative market to sell the metal short, and exactly this process followed, leading to a 20-year low of \$257 per ounce. The average price for the quarter was \$273 per ounce, compared with \$287 for the first quarter of this year.

The first of the British auctions took place on 6 July with the sale of 25 tonnes of gold out of the 415 tonnes which the United Kingdom proposes to sell by mid-2000. The sale proceeded without incident, but proved to be a benchmark against which to sell short immediately after the auction. The market remains weak, although there is some evidence of a return of two-way business to the market.

The opportunities provided to speculators by the public pre-announcement of the British sales, and the resulting fall in the gold price by this speculation, has revived a view amongst gold market commentators - reflecting the fact that widespread sales of official gold reserves are inevitable and will, in due course, push the depressed price of gold substantially lower. This view has been supported by the proposal by International Monetary Fund to sell some 10 million ounces of IMF gold reserves as part of a debt relief scheme for Heavily Indebted Poor Countries. In addition, Switzerland has continued to move towards its aim of selling half of the Swiss National Bank's stockpile of 2 590 tonnes, to be spread over a period as long as ten years.

Neither of these proposals to sell gold reserves would necessarily lead to net official sales of gold of the typical levels absorbed by the gold market annually in recent years. However, the damage done to the gold market by speculators in reaction to the British gold sale announcement has alerted gold producers and others in the gold mining industry to the potential negative impact in today's fragile market of all official gold sales. The gold mining industry is absorbed currently with these immediate challenges, in the longer term it is on all of those with an interest in this industry to find a modus operandi for interaction between the traded market in the metal which avoids market dislocation. This is clearly not what has happened in the British sales, where all parties with a long-term interest in gold - official institutions and investors - have benefited, while only speculators with no long-term interest in either the metal or the gold market have benefited.

Edgar Filing: ANGLOGOLD LTD - Form 6-K

In contrast to the aggressive selling of gold by speculators, the physical market for gold during 1997 has been shown further encouraging growth. Off-take in South Korea and South East Asia went up by 50% compared to the second quarter of 1998, whilst gold imports into Japan are 80% up. Demand from the USA was up by 10% in the first quarter of 1998, whilst demand from India increased after a disappointing first quarter. New opportunities for market growth are being seen in Pakistan and in the Middle East, particularly Egypt.

This paradox of healthy and growing physical demand juxtaposed with aggressive short selling in the gold market reinforces the extent to which the current gold market has lost touch with reality, as speculative investment sectors are encouraged to sell the metal on the as yet unproved speculation of imminent ongoing central bank gold sales. These rumours have been used for a number of years now to depress gold prices and yet there remains to date no support in the actual behaviour of the official sector for these claims. By contrast, of the approximately 33 000 tonnes of official gold holdings, we know that nearly 21 000 tonnes are in the firm hands of the United States Federal Reserve, and the members of the European Central Bank and other international institutions have given reassurances to the market in recent months that they have no intention of selling their gold. The challenge in the market place going forward must be to convey this reality to market participants and the media alike, in contradiction to the popular misrepresentation described above.

Edgar Filing: ANGLOGOLD LTD - Form 6-K

As at 30 June 1999, the company had outstanding the following net forward pricing commitments against future production. A portion of these sales consists of US dollar-priced contracts which have been converted to rand at average annual forward rand values based on a spot rand/dollar exchange rate of R6. 00 available on 30 June 1999. The percentage of the sales priced in US dollars is shown below:

The hedge position of the company increased by 6% to 13.6 million ounces spread over ten years – and ten months of production. The average price of these positions, 59% of which are priced in US marginally by 0.3% to \$343 per ounce or R84 266 per kilogram at an exchange rate of R/\$6.00. The tonnage reflects the completion of the hedging for the mines acquired from Minorco in terms of the

The net present value of all hedge transactions making up the hedge positions in the above table (\$507 million) as at 30 June 1999. This value was based on a gold price of \$262.45 per ounce, an

R/\$6.00 and the prevailing market interest rates and volatilities at the time.

As at 28 July 1999, the net present value of the hedge book was R3.57 billion (\$583 million), based

\$253.65 per ounce, an exchange rate of R/\$6.12 and the prevailing market interest rates and volatilities

Edgar Filing: ANGLOGOLD LTD - Form 6-K

1. The results have been prepared in accordance with International Accounting Standards. All figures are in South African Rand. In line with the company's policy of partially consolidating the results of joint ventures, the results of the mine for the quarter ended 30 June 1999 have been included for the first time.

Profit from sales of the by-products, uranium and acid, is now set off against cash costs, in accordance with the Institute definition.

The comparative figures for the previous quarter and the corresponding six months period to 30 June 1998 have been restated accordingly.

2. During the quarter 9 900 ordinary shares were allotted in terms of the Share Incentive Scheme, increasing the number of ordinary shares in issue at 30 June 1999 to 97 867 099.

3. Earnings per share have been calculated using a weighted average number of ordinary shares.

4. Orders placed and outstanding on capital contracts as at 30 June 1999 totalled R360. 8 million, equivalent to US\$59. 8 million at the rate of exchange ruling on that date.

5. Year 2000

From a mission critical perspective, the South African operations reached Year 2000 compliance by July 1999, one month later than anticipated, and are expected to be in a position to continue business as usual through the year 2000. Further testing will continue during the remainder of 1999. The total cost is estimated at R25 million incurred to 31 July 1999 amount to some R25 million.

The non-South African operations have independent committees dealing with the Year 2000 issue. There are no indications that these operations will be adversely affected by the change to the new millennium. The company believes its worst case scenario to be the failure of infrastructural services provided by utility agencies and other third-party suppliers (including energy, water and transport). In the unlikely event of this occurring, the company's operations could be interrupted. The company is preparing contingency plans for mission critical components to address the situation.

6. Dividend

The directors have today declared Interim Dividend No. 86 of 900 South African cents per ordinary share for the six months ended 30 June 1999. Payment details are as follows:
