

Securities registered pursuant to Section 12(b) of the Act:

<u>Title of each class</u>	<u>(Name of each exchange on which registered)</u>
Class A Common Stock, \$0.001 par value per share	New York Stock Exchange

Securities registered pursuant to Section 12(g) of the Act:

None

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Website, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (section 232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K (§ 229.405 of this chapter) is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See definition of "accelerated filer," "large accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer	Accelerated filer	Non-accelerated filer (Do not check if a smaller reporting company)	Smaller reporting company
-------------------------	-------------------	--	---------------------------

Indicate by check mark whether the registrant is a shell company (as defined by Rule 12b-2 of the Exchange Act). Yes No

The aggregate market value of Class A Common Stock (Common Stock) held by non-affiliates of the registrant based upon the closing sale price on the New York Stock Exchange on June 30, 2013 was approximately \$733.1million. Shares held by each executive officer, director and by certain persons that own 10% or more of the outstanding Common Stock have been excluded in that such persons may be deemed to be affiliates. This determination of affiliate status is not necessarily a conclusive determination for other purposes.

Indicate by check mark whether the registrant has filed all documents and reports required to be filed by Section 12, 13, or 15(d) of the Securities Exchange Act of 1934 subsequent to the distribution of securities under a plan confirmed

by a court. Yes No

1

As of February 20, 2014, the registrant had 60,074,340 shares of Class A Common Stock outstanding at \$0.001 par value per share.

DOCUMENTS INCORPORATED BY REFERENCE

Portions of our Definitive Proxy Statement for our 2014 Annual Meeting of Stockholders (2014 Proxy Statement) are incorporated by reference into Part III hereof.

Explanatory Note

This Amendment No. 1 to the Spansion Inc. Annual Report on Form 10-K for the fiscal year ended December 29, 2013, which was originally filed with the Securities and Exchange Commission on February 25, 2014 (the “Original Filing”), is being filed to correct inadvertent clerical errors in Exhibits 32.1 and 32.2. No other change to the previously filed certifications is intended to be made by the filing of this Form 10-K/A, and this Form 10-K/A does not amend, update or change any other items or disclosures contained in the Original Filing. This Amendment No. 1 to the Form 10-K continues to speak as of the date of the Original Filing and does not reflect any events that occurred at any subsequent date.

Spansion Inc.

Cautionary Statement Regarding Forward-Looking Statements

This Annual Report on Form 10-K contains forward-looking statements. These statements relate to future events or our future financial performance. Forward-looking statements may include words such as “may,” “will,” “should,” “expect,” “plan,” “intend,” “anticipate,” “believe,” “estimate,” “predict,” “potential,” “continue” or other wording indicating future results or expectations. Forward-looking statements are subject to risks and uncertainties, and actual events or results may differ materially. Factors that could cause our actual results to differ materially include, but are not limited to, those discussed under “Risk Factors” in this report. We also face risks and uncertainties associated with substantial indebtedness and its impact on our financial health and operations; fluctuations in foreign currency exchange rates; the sufficiency of workforce and cost reduction initiatives. Other risks and uncertainties relating to our business include our ability to: implement our business strategy focused on the embedded flash memory, microcontrollers, mixed-signal and analog markets; maintain or increase our average selling price and lower our average costs; accurately forecast customer demand for our products; attract new customers; obtain additional financing in the future; maintain our distribution relationships and channels in the future; successfully enter new markets and manage our international expansion; successfully compete with existing and new competitors, or with new memory or other technologies; successfully develop new applications and markets for our products; maintain manufacturing efficiency; obtain adequate supplies of satisfactory materials essential to manufacture our products; successfully develop and transition to the latest technologies; negotiate patent and other intellectual property licenses and patent cross-licenses and acquire additional patents; protect our intellectual property and defend against infringement or other intellectual property claims; maintain our business operations and demand for our products in the event of natural or man-made catastrophic events; and effectively manage, operate and compete in the current highly competitive business environment. Except as required by law, we undertake no obligation to revise or update any forward-looking statements to reflect any events or circumstances that arise after the date of this report, or to conform such statements to actual results or changes in our expectations.

ITEM 1. BUSINESS

Overview

We are a leading designer, manufacturer and developer of embedded systems semiconductors, which include flash memory, microcontroller, mixed-signal and analog products and embedded system-on-chip solutions. Our leading-edge intellectual property and products are driving the development of high quality, reliable and economical devices that are high performing, intelligent, efficient and secure.

The embedded markets we focus on are transportation, industrial, consumer, communications and gaming. These markets require reliable flash memory solutions, microcontrollers, mixed-signal and analog and other programmable semiconductors that run applications in a broad range of electronic systems. The embedded markets are generally characterized by longer design and product life cycles, relatively stable pricing, more predictable supply-demand outlook and lower capital investments. Within this embedded industry, we serve a well-diversified customer base through a predominantly differentiated, non-commodity, service oriented model that strives to meet our customers' needs. Our embedded solutions are incorporated in products manufactured by leading original equipment manufacturers (OEMs). We spend many years refining our product and service strategy to address market requirements and deliver high-quality products that go into a broad range of electronic applications such as automobiles, airplanes, set top boxes, games, telecommunications equipment, smart meters, factory automation and medical devices.

Our products are designed to accommodate various voltage, interface and density requirements for a wide range of applications and customer platforms. The majority of our NOR flash memory product designs are based on our proprietary two-bit-per-cell MirrorBit® technology, which has a simpler cell architecture, higher yields and lower costs than competing floating gate NOR flash memory technology. While we are most known for our NOR products, we are expanding our portfolio in the areas of NAND flash memory, microcontroller, mixed-signal and analog products, as well as programmable system solutions or embedded system-on-chip solutions to broaden our customer engagement and bring differentiated products to embedded markets. In support of this strategy, we completed the acquisition of the microcontroller and analog business (the MCA business) of Fujitsu Semiconductor Limited (FSL) on August 1, 2013, for purchase consideration of \$150.0 million, net of cash acquired (the Fujitsu Acquisition).

In addition to our products, we generate revenue by licensing our intellectual property to third parties and we assist our customers in developing and prototyping their designs by providing software and hardware development tools, drivers and simulation models for system-level integration.

For fiscal 2013, we had net sales of \$971.7 million and net loss of \$78.3 million.

For fiscal 2012, we had net sales of \$915.9 million and net income of \$24.9 million.

For fiscal 2011, we had net sales of \$1,069.9 million and net loss of \$55.9 million.

We are headquartered in Silicon Valley in California, with research and development, manufacturing, assembly and sales operations in the United States, Asia, Europe and the Middle East. We own and operate a wafer fabrication facility in Austin, Texas and a final manufacturing facility in Bangkok, Thailand. Final manufacturing consists of assembly, test, mark and pack operations. We also own a manufacturing facility in Penang, Malaysia, which does small volumes of sort and pack operations. For geographical information with respect to our sales and assets refer to Note 18 of Consolidated Financial Statements.

We were incorporated in Delaware in 2005. Our mailing address and executive offices are located at 915 DeGuigne Drive, Sunnyvale, California 94085, and our telephone number is (408) 962-2500. References in this report to “Spansion,” “we,” “us,” “our,” or the “Company” shall mean Spansion Inc. and our consolidated subsidiaries, unless the context indicates otherwise. We are subject to the information and periodic reporting requirements of the Securities Exchange Act of 1934, as amended or Exchange Act, and, in accordance therewith, file periodic reports, proxy statements and other information with the Securities and Exchange Commission, or SEC. Such periodic reports, proxy statements and other information are available for inspection and copying at the SEC’s Public Reference Room at 100 F Street, NE, Washington, DC 20549 or may be obtained by calling the SEC at 1-800-SEC-0330. In addition, the SEC maintains a website at <http://www.sec.gov> that contains reports, proxy statements and other information regarding issuers that file electronically with the SEC. We also post on the Investor Relations section of our website, <http://www.spansion.com>, under “*Financial Information*” a link to our filings with the SEC. We post our Code of Ethics for our Chief Executive Officer, Chief Financial Officer, Corporate Controller and other Senior Finance Executives, our Code of Business Conduct, which applies to all directors and all our employees, and the charters of our Audit, Compensation and Nominating and Corporate Governance committees under “*Corporate Governance*” on the Investor Relations section of our website. Our filings with the SEC are posted as soon as reasonably practical after they are filed electronically with the SEC. Please note that information contained on our website is not incorporated by reference in, or considered to be a part of, this report.

Industry Overview

The proliferation of electronic systems, such as broadband access devices, automotive infotainment, instrument cluster and safety control, digital TVs, set-top boxes, printers, digital cameras, gaming machines, wireless and wired infrastructure, white goods, industrial automation and control modules are driving the increasing use of embedded systems solutions to deliver an enhanced end-user experience. Electronic systems need to store both operating instructions in the form of software code as well as content or data that needs to be processed. As electronic systems across various applications add increasingly complex features to process rich multimedia content with higher performance, they require more processing, code and data storage without compromising reliability and system cost.

Overview of embedded systems solutions

Embedded systems solutions address a variety of applications, including automotive, consumer electronics, networking and telecommunications equipment, smart phones, tablets, PCs, gaming consoles and industrial equipment with a broad range of products. We have two major product groups for embedded applications: flash memory and microcontroller and analog products.

The flash memory market consists of two major architectures: NOR and NAND flash memory. NOR flash memory is predominantly used for reliable code execution and performance-oriented storage in consumer electronics, automobiles, communications, gaming and industrial applications. NAND flash memory is predominantly used for data storage in applications, such as solid-state drives, removable storage devices and embedded managed NAND devices. Overall, customers seeking fast read performance and superior reliability traditionally have chosen NOR flash memory, while those seeking high density and fast write speeds have chosen NAND flash memory. We offer a broad family of parallel and serial NOR flash memory and a select range of lower density NAND flash memory products targeting non-commodity embedded applications.

Microcontrollers are a small computer on a single integrated circuit containing a processor core, memory, and programmable input/output peripheral capability. Microcontrollers are designed for embedded applications where they are frequently the principle, and sometimes sole integrated circuit. Microcontrollers are also frequently designed with flexibility for applicability across multiple applications and uses. We have a family of 8-, 16-, 32-bit proprietary and 32-bit ARM based microcontrollers that are used in automotive such as body electronics, chassis and safety, power train and hybrid, home appliances, digital audio / video equipment, industrial and office equipment. The ARM based solutions offer some of the most innovative feature sets for advanced automotive dashboard and instrument clusters and the automation and control industrial segments.

Analog semiconductors measure, condition and regulate “real world” functions such as temperature, speed, sound and electrical current. We offer environmentally-friendly power management technology through our lineup of power management integrated circuits (PMIC), including DC/DC converters, voltage regulators and supervisors, and power monitoring and reset integrated circuits (ICs). In addition, we offer a family of LED lighting driver ICs and energy harvesting solutions.

Technology

We own and use fundamental intellectual property in two flash memory technologies, floating gate and charge trapping MirrorBit technology. Compared to competing floating gate multilevel cell NOR technology, two-bit-per-cell MirrorBit technology has a simpler cell architecture that requires fewer manufacturing steps and supports higher yields, resulting in lower manufacturing costs. Our current mid- and high-density products and new advanced products are based primarily on MirrorBit two-bit-per-cell technology.

Floating Gate Technology. Floating gate is the conventional flash memory cell technology that is utilized by most flash memory companies today for both NOR and NAND products. We have created innovations in floating gate technology that have become industry standards, such as negative gate erase, single power supply and embedded programming algorithms. Some of our new products designed to service the low density market are based on floating gate technology.

MirrorBit Technology. MirrorBit NOR technology is the foundation of our current mid- and high-density product roadmap. Also referred to as charge trapping technology, MirrorBit NOR technology stores two distinct charges in a single physical memory cell, with each charge equivalent to one bit of data thereby doubling the density of each physical memory cell and enabling higher density, lower cost products.

Embedded Charge Trap Technology (eCT). Our 40nm embedded charge trap technology is the foundation process technology for our next generation microcontrollers and system-on-chip solutions.

Sales and Marketing

We market and sell substantially all of our products worldwide under the Spansion trademark. We sell to our customers directly or through distributors.

We market our products through a variety of direct and indirect channels. We have direct relationships with many of our top customers worldwide. We supplement this effort with programs to support the design-in of our products on reference designs from third parties, which are typically used by embedded customers when choosing solutions. In addition, we focus a portion of our marketing efforts on providers of complementary semiconductor products such as chipsets to ensure that our products interoperate effectively with the most widely used components in various

embedded applications.

Our marketing activities target customers, reference design houses and our potential partners; and include a combination of direct marketing activities such as trade shows, events and marketing collateral, and indirect activities such as public relations and other marketing communications activities.

Customers

We serve our customers worldwide directly or through our distributors, who buy products from us and resell them to OEMs and original design manufacturer, or ODMs, either directly or through their own distributors. Customers for our products consist of OEMs, ODMs, distributors and contract manufacturers. Our global direct sales force is predominantly organized by customer end markets in order to bring dedicated expertise, knowledge and response to our customers. No end customer accounted for more than 10% of our net sales for the fiscal years 2013, 2012 and 2011.

Third-Party Distributors

Our third-party distributors typically resell to OEMs, ODMs and contract manufacturers. Sales through our direct distributors are made pursuant to agreements that provide them price protection and limited rights of return for discontinued products or for other products within one year of their date of manufacture. Distributors get price protection by way of credits for the difference between the original price paid and the current price that we offer. Price protection is based on market conditions, competitive considerations and other factors. In addition, our agreements with distributors may also contain standard stock rotation provisions permitting limited levels of product returns. Since we are unable to reliably estimate the resale price to our end customer and returns under the stock rotation rights to our distributors, we defer the recognition of revenue and related product costs on these sales as deferred income until distributors submit Point of Sales reports to us. We also sell some of our products to certain distributors under sales arrangements that do not allow for rights of return or price protection on unsold products. We recognize revenue on these sales when the earnings process is complete, as evidenced by an agreement with the customer, transfer of title, fixed or determinable pricing and when collectability is reasonably assured.

We generally warrant that products sold to our customers and our distributors will, at the time of shipment, be free from defects in workmanship and materials and conform to our approved specifications. Subject to specific exceptions, we offer a one year limited warranty.

We have long-standing relationships with our distributors. We believe that distributors provide an effective means of reaching our broad and diverse target customer base. Customers recognize us for our products and brand name and use distributors as an effective supply channel. Approximately 71%, 68% and 69% of our sales were through distributors for fiscal 2013, fiscal 2012 and fiscal 2011, respectively. One distributor, FSL, and its subsidiaries accounted for approximately 39%, 33% and 29% of our total net sales for fiscal 2013, fiscal 2012 and fiscal 2011, respectively. The increase of sales through FSL to 39% of our total net sales in fiscal 2013 related to MCA business for which FSL is the sole distributor in Japan.

Research and Development

Our investment and strategy in research and development are geared towards providing competitive, embedded solutions to our customers through three product families: flash memory, microcontrollers, and analog. Our research and development (R&D) efforts span across process technology, product design, systems engineering, and software, with teams in various locations around the world, including the Sunnyvale, California headquarters, as well as Israel, Japan, Germany, Malaysia, and China.

Several strategic R&D activities are ongoing. With Wuhan XinXin Semiconductor Manufacturing Corporation (XMC) in China, we completed the qualification of 45nm MirrorBit® Technology in February 2013 and started shipping our 8Gb product, the industry's highest-density monolithic NOR. We are now focused on 32nm MirrorBit development as we believe that the two-bits-per-cell MirrorBit technology continues to be the benchmark in the high-density NOR industry for performance, reliability, and scalability based on evidence from many generations of scaling. We are also partnering with XMC for floating-gate NOR technologies for our line of serial NOR products.

In February 2013, we entered into an agreement with United Microelectronics Corporation (UMC) to integrate our eCTTM Technology with UMC's low-power logic at the 40nm node. We expect that eCT, which is a derivative of our proven, charge trap technology, will provide highly competitive cell size, along with the performance and reliability needed in microcontroller products for automotive, industrial, and consumer applications. With the acquisition of the MCA business, 40nm eCT is expected to extend the competitiveness of our microcontroller products beyond the 55nm embedded Flash technology, which is being developed with FSL.

Our alliance with SK Hynix Inc. (SK Hynix) continues to enable our offering of high quality and reliability SLC NAND products for embedded applications. In 2013, we introduced 32nm SLC NAND products, adding to the

existing portfolio of 48nm and 41nm product families.

We have entered into many agreements for our microcontroller and analog business with FSL. We are in production with a 90nm integrated logic and flash memory process while developing 55nm technology for the next generation of microcontroller products.

Innovations driven by R&D are a key enabler in delivering the long-term value to our customers. Through judicious planning and by leveraging strategic arrangements, we expect to continue to maximize the return on our R&D investment.

Our research and development expenses for fiscal 2013, fiscal 2012 and fiscal 2011 were \$126.8, \$107.9 and \$106.6 million, respectively. For more information, see Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations."

Manufacturing

We own and operate one wafer fabrication facility, Fab 25, which is located in Austin, Texas and has approximately 114,000 square feet of clean room space. This facility produces 200-millimeter wafers using 130-nanometer, 110-nanometer, 90-nanometer and 65-nanometer process technologies. We own and operate a final manufacturing facility in Bangkok, Thailand. Final manufacturing consists of assembly, test, mark and pack operations. We also own a manufacturing facility in Penang, Malaysia, which does small volumes of sort and pack operations. In addition to our own internal capacity, we outsource wafer manufacturing and assembly and test services to third parties to supplement our internal resources.

We direct significant efforts toward the invention and development of manufacturing process technologies to achieve the objectives of reducing our manufacturing costs, improving our device performance and adding product features and capabilities. We achieve these objectives primarily through a combination of optimizing the number of process steps required to produce a product and by reducing the scale or size of key structures in our integrated circuits such as the memory cells used to store charge and the surrounding circuits that manage and interface to these cells. We develop each process technology using particular design rules and refer to this as the process or technology node designated in nanometers. By shrinking the features, we enable more transistors in the same area, which allows us to incorporate more bits per wafer at each successive process node, decreasing the cost per bit and either increasing the number of die per wafer for a given density or increasing the memory density per die.

We outsource a portion of our manufacturing function to external wafer foundry companies in order to augment our internal wafer fabrication capacity. We have agreements with XMC, FSL, SK Hynix and Dongbu HiTek Co., Ltd. The arrangement with XMC provides production support for advanced NOR technology products at 65, 45 and 32 nanometers. This agreement and the related production support were transferred to XMC from Semiconductor Manufacturing International Corporation (SMIC) in 2013. Agreements with FSL include agreements for the supply of product wafer foundry services, sort services and assembly and test services relating to the microcontroller and analog businesses. We also had an arrangement with FSL for the supply of legacy products on legacy production process nodes for our flash memory business, which ended in fiscal 2013. The arrangement with SK Hynix provides for the development and supply of SLC NAND products at the 4x, 3x and 2x nodes. The arrangement with Dongbu HiTek provides for the supply of floating-gate NOR products at the 90-nanometer node. Cooperation with foundries for advanced process node development allows for a cost effective solution for process technology development as an alternative to an in-house research and development facility.

Our supply agreements with FSL relating to the microcontroller and analog businesses were entered into at the time of our acquisition of these businesses from FSL. These agreements are at competitive market rates and enable us to leverage FSL's existing manufacturing capabilities spanning across various technologies, processes, geometries and wafer sizes in their wafer fabrication facilities and package solutions in their back-end manufacturing facilities, until such time that we can either move these internally to our fabrication and back-end facilities or find more competitive solutions. The fabrication facilities are all located in Japan, while the back-end facilities are in Japan and other Asian countries. The supply agreements do not call for any minimum purchase commitments.

Our manufacturing processes require many raw materials, such as silicon wafers, mold compounds, substrates, and various chemicals and gases, and the necessary capital equipment for manufacturing. We obtain these materials and equipment from a large number of suppliers located throughout the world.

Environmental Matters

Many of our facilities are located on properties or in areas with a long history of industrial activity. Prior to 2003, environmental audits were conducted for each of our manufacturing facilities. The audits described various conditions customary of facilities in our industry and, in particular, noted historical soil and groundwater contamination at our Sunnyvale, California facility arising from the leakage of chlorinated solvent storage tanks that previously had been located on this property. This property is listed on the U.S. Environmental Protection Agency's Superfund National Priorities List. Advanced Micro Devices, Inc., or AMD, the former owner of the property and responsible party, is investigating and remediating this contamination.

In 2003, each of AMD and FSL agreed to indemnify us against losses arising out of the presence or release, prior to June 30, 2003, of hazardous substances at or from these and other sites they each contributed to us in connection with the formation of our joint venture predecessor, FASL LLC. Conversely, Spansion LLC, our operating subsidiary agreed to indemnify each of AMD and FSL from and against liabilities arising out of events or circumstances occurring after June 30, 2003, in connection with the operation of our business. AMD and FSL, on the one hand, and we, on the other, agreed to indemnify the other against liability arising from permit violations attributable to our respective activities. To the extent AMD and FSL cannot meet their obligations under any of their indemnity agreements, or material environmental conditions arise, we may be required to incur costs to address these matters, which could have a material adverse effect on us.

We have made and will continue to make capital and other expenditures to comply with environmental laws, but we do not expect compliance with environmental requirements to result in material expenditures in the foreseeable future. Environmental laws and regulations are complex, change frequently and have tended to become more stringent over time, all of which are factors that could alter the current outlook. See Item 1A. “Risk Factors—We are subject to a variety of environmental laws that could result in liabilities.”

Conflict Minerals

In August 2012, the SEC issued final rules requiring disclosure of the use of conflict minerals (tantalum, tin, tungsten and gold) originating in the Democratic Republic of Congo and adjoining countries. We have determined that conflict minerals are necessary to the functionality or production of our products and are in the process of verifying the country of origin for these conflict minerals with our suppliers. Our first disclosure report for the 2013 calendar year is due as of May 31, 2014.

Competition

Our competitors include but are not limited to:

- Analog Devices, Inc.
- Freescale Semiconductor, Inc.
- Infineon Technologies Corporation
- Intel Corporation
- Macronix International Co., Ltd.
- Maxim Integrated Products, Inc.
- Micron Technology, Inc.
- Microchip Technology Inc.
- Renesas Electronics Corp.
- SK Hynix Inc. (“SK Hynix”)
- ST Microelectronics N.V.
- Toshiba Semiconductor Company Inc.
- Winbond Electronics Corporation

We believe providers of embedded systems solutions must possess the following attributes to remain competitive:

• strong relationships with OEMs, ODMs and contract manufacturers that are acknowledged leaders within their respective industries;

• discipline to continually reduce costs ahead of historically declining semiconductor market prices;

• strong market focus to identify emerging flash memory-based embedded systems applications;

• advanced research and development;

• flexibility in manufacturing capacity and utilization so as to take advantage of industry conditions through market cycles;

• access to the financial resources needed to maintain a highly competitive technological position;

• focus on sustainable and profitable portions of the markets;

• the ability to establish and sustain strategic relationships and alliances with key industry participants;

• the ability to manufacture products with a high degree of quality, performance, market acceptance and a low cost structure;

• rapid time to market for new products, measured by the time elapsed from first conception of a new product to its commercialization, and

• a strong network of enabling and ecosystem partners

Employees

We had 3,685 employees as of December 29, 2013.

Backlog

We generally manufacture and market standard lines of our products. Sales are made primarily pursuant to purchase orders for delivery or agreements covering purchases over a period of time. These orders or agreements may be revised or canceled without penalty. In this respect, the amount of backlog as of any particular date is not the sole indicator of future results.

Patents, licenses and trademarks

Our success depends in part on our proprietary technology. We rely on a combination of protections provided by contracts, including confidentiality and non-disclosure agreements, copyrights, patents, trademarks and common law rights, such as trade secrets, to protect our intellectual property against infringement or misappropriation by others and to ensure that we have the ability to generate royalty and other licensing revenues. We intend to continue to license our intellectual property to third parties. In fiscal 2013 we sold some patents that were non-essential to our core businesses and we may continue to sell or enter into other business arrangements with third parties relative to individual patents or portfolios of patents on a selective basis. We also acquired or were assigned a significant amount of IP, including approximately 1,311 patents and patent applications, in connection with our acquisition of the MCA business from FSL.

As of December 29, 2013, we had 2,560 U.S. patents and 1,530 foreign patents as well as 383 patent applications pending in the United States and 563 patent applications pending outside the United States. We expect to file future patent applications in both the United States and abroad on significant inventions, as we deem appropriate. There can be no assurance that the claims allowed on any patents we hold will be sufficiently broad to protect our technology, or that any patents will be issued from any application pending or filed by us.

ITEM 1A. RISK FACTORS

You should carefully consider the risks described below and the other information in this Annual Report on Form 10-K. If any of the following risks materialize, our business could be materially harmed, and our financial condition and results of operations could be materially and adversely affected.

The risks described below are not the only ones facing us. Additional risks not currently known to us or that we currently believe are immaterial may also impair our business, results of operations, financial condition and liquidity.

The semiconductor market is highly competitive and subject to rapid, highly volatile changes in demand, pricing and product mix that are difficult to predict. Our failure to adequately forecast our customers' needs could materially adversely affect our business.

The semiconductor market is mature and subject to business cycles that can include extended periods of oversupply and constant downward price pressure, which is due, in substantial part, to the relatively large number of competing firms and technologies. Our competitors include Analog Devices, Inc., Freescale Semiconductor, Inc., Infineon Technologies Corporation, Macronix International Co., Ltd, Maxim Integrated Products, Inc., Micron Technology, Inc., Renesas Electronics Corp., SK Hynix Inc. ("SK Hynix"), ST Microelectronics N.V., Toshiba Semiconductor Company Inc. and Winbond Electronics Corporation.

During economic downturns, periods of extremely intense competition, or the presence of oversupply in the industry, the selling prices for our products have declined at a rapid rate over relatively short time periods as compared to historical rates of decline. When such pricing declines occur, we may not be able to mitigate their effects by selling more or higher margin units, or by reducing our manufacturing costs in a corresponding fashion. In such circumstances, our operating results could be materially adversely affected and we may determine that goodwill or other intangible assets have become impaired.

To forecast demand and value inventory, we consider, among other factors, inventory on hand, historical customer demand data, backlog data, the competitiveness of product offerings, target market growth, market conditions and product life cycles. If we are unable to accurately assess these factors and anticipate future demand or market conditions, we may have excess or obsolete inventory resulting in inventory write-down which would be reflected in cost of sales in the period the write-down is made. In addition, during periods of industry overcapacity, customers generally do not order products as far in advance of the scheduled shipment date as they do during periods when our industry is operating closer to capacity, which can exacerbate the difficulty in forecasting capacity requirements and may result in increased inventory levels. Similarly, when customers change orders booked with us, our planned manufacturing capacity may be greater or less than actual demand, resulting in less than optimal capacity usage. When this occurs, we adjust our production levels, but downward adjustments may not prevent our production of excess inventory. An inability to address challenges like the ones described above would have a negative impact on our gross margin in that period. Moreover, inaccurate forecasting could also result in shortages in inventory that would cause us to fail to meet customer demand. If we are unable to produce the types and quantities of products within the timeframes and on delivery schedules required by our customers, we may lose customers or, in certain circumstances, be liable for losses incurred by our customers, which would materially adversely affect our business and financial results.

Investment in new business strategies and acquisitions, such as our acquisition of the Fujitsu MCA business, involves numerous risks and may not result in the strategic and financial benefits we expected, and may present risks not originally contemplated.

On August 1, 2013, we completed the acquisition of the MCA business. This transaction involved challenges and risks that could adversely affect our business and operating results, including:

- the transaction may not provide the advantages that we anticipated;
- we have little experience in producing, marketing and selling MCA products and may not be able to do so successfully;
- we will be required to dedicate a significant amount of time and attention of our senior management and other employees to the integration of the MCA business operations, and this may adversely affect their capacity to manage the combined business or pursue other opportunities;
- we may not realize a satisfactory return;
- we may be unable to retain key personnel;
- we may experience difficulty in integrating new employees, business systems, and technology;
- the acquired MCA business may not have adequate controls, processes, and procedures to ensure compliance with laws and regulations, including controls in accordance with Section 404 of the Sarbanes-Oxley regulations, and our due diligence process may not have identified compliance issues or other liabilities;
- we may be unable to retain the customers and partners of acquired businesses; and/or
- there may be unanticipated intellectual property disputes or other litigation.

We may also be subject to additional liabilities imposed by law as a result of our participation in a multi-employer defined benefit pension plan. The Plan imposes certain liabilities upon an employer who is a contributor to a multi-employer pension plan under specific circumstances such as the employer withdraws from the plan, or the plan is terminated, or experiences a mass withdrawal. These liabilities include an allocable share of the underfunded vested benefits in the plan for all plan participants, not merely the benefits payable to a contributing employer's own retirees. As a result, participating employers may bear a higher proportion of liability for underfunded vested benefits if other participating employers cease to contribute or withdraw, with the reallocation of liability being more acute in cases when a withdrawn employer is insolvent or otherwise fails to pay its withdrawal liability. Also, contribution rates could increase if the performance of plan assets does not meet expectations.

The MCA business is currently concentrated primarily in Japan in automotive and consumer applications, which exposes us to certain risks, including Japanese currency exchange rate fluctuations, contraction in automotive and consumer end- market demand due to adverse regional or worldwide economic conditions, as well as a decline in the automotive industry in Japan. If we are unable to achieve greater diversification in our MCA business, we could be materially adversely affected.

In addition, we may in the future invest in other new business strategies or acquisitions that may involve significant risks and uncertainties, including the distraction of our management team from current operations, greater than expected liabilities and expenses, inadequate return on capital, and unidentified issues not discovered during our due diligence. Our results of operations may be adversely impacted by costs associated with our acquisitions, including one-time charges associated with restructurings. Further, our acquisitions could fail to produce the benefits that we anticipate, or could have other adverse effects that we currently do not foresee. In addition, some of the assumptions that we have relied upon, such as achievement of operating synergies, may not be realized.

Our operating results are dependent on the performance of distributors, including FSL, who is our primary distributor for Japan.

A significant portion of our sales are through independent distributors that are not under our control. For example, sales through distributors accounted for 71%, 68% and 69% of our net sales for fiscal 2013, 2012 and 2011, respectively. Generally, our agreements with third party distributors may be terminated for convenience by either party upon relatively short notice and are non-exclusive, permitting our distributors to offer our competitors' products. We generally do not require letters of credit from our distributors and are not protected against accounts receivable default or bankruptcy of these distributors. While historically the inability to collect open accounts receivable has not been an issue for us, we cannot be assured that we will not encounter such collection problems in the future. Termination of a significant distributor, whether at our initiative or the distributor's initiative, could disrupt our business, and if we are unable to find suitable replacements, our operating results could be adversely affected.

In Japan, which is an important geographic market for us, we currently rely primarily on FSL through one of its subsidiaries to distribute our products to customers. For example, sales of our products through FSL represented 39% of our total net sales for fiscal 2013, and we expect this percentage to increase in 2014 due to our acquisition of the MCA business.

Our agreement with FSL for flash memory sales is no longer exclusive and FSL may sell our competitors' flash memory products. However, our agreement with FSL for the distribution of MCA products within Japan, and for certain accounts outside Japan, is exclusive for a period of five years, during which time FSL is not permitted to offer competing products. Either party may terminate the flash memory distribution agreement for convenience upon 60 days written notice to the other party. Either party may terminate the MCA distribution agreement for breach upon 120 days written notice to the other party. If FSL unexpectedly terminates either of the distribution agreements with us, or otherwise ceases its support of our customers in Japan, we would be required to develop and rely on a relationship with another distributor or establish our own local sales organization and support functions. We cannot be certain that we would be successful in selling our products to customers currently served by FSL or new customers. If our sales in Japan were to decline, our operating results could be materially adversely affected.

We generally provide price protection to our distributors on the inventory they carry. Significant declines in the value of that inventory may require us to undertake inventory write-downs.

Distributors typically maintain an inventory of our products. For certain distributors, we have signed agreements that protect the value of their inventory of our products against price reductions, and/or provide for rights of return under specific conditions. Certain agreements with our distributors also contain standard stock rotation provisions permitting limited levels of product returns. We do not recognize revenue on our sales to these distributors until the applicable products are re-sold by the distributors and reported to us. However, in the event of an unexpected significant decline in the price of our products or significant return of unsold inventory, we may experience inventory write-downs, charges to reimburse costs incurred by distributors, or other charges or adjustments, any of which could result in a material adverse impact to our revenues and operating results.

We are not protected by long-term supply contracts with our customers.

We do not typically enter into long-term supply contracts with our customers, and we cannot be certain as to future customer order levels. When we do enter into a long-term contract, the contract is generally terminable at the convenience of the customer. In the event of an early termination by one of our major customers, it is unlikely that we will be able to rapidly replace that revenue source which would harm our financial results.

A number of factors, including our fab utilization, inventory strategy, can impact our gross margins.

Numerous factors, including fab utilization, yield, wafer pricing, product mix, market acceptance of our new products, competitive pricing dynamics, geographic and/or market segment pricing strategies cause our gross margins to fluctuate. In addition, forecasting our gross margins is difficult because a significant portion of our business is based on the fulfillment of orders within the same quarter the orders are placed. In the event demand does not materialize, we may be subject to incremental obsolescence costs. Future product cost reductions could also have an adverse impact on our inventory valuation, which would then impact our operating results.

Our global customer base and support structure expose us to regional risks that could materially adversely affect our business globally.

Sales to customers outside the United States were approximately 87% of our total net sales for fiscal 2013. Additionally, we operate in more than ten countries, and a substantial portion of our manufacturing operations and those of our third party manufacturers are located outside the United States, primarily in Japan, China, Taiwan, Korea, Thailand and Malaysia. As a result, our business is subject to a variety of risks that are specific to the regions and countries in which we operate, including:

- currency exchange rate fluctuations and restrictions on the transfer of funds;
- natural disasters, such as tsunamis, earthquakes, fires and floods;
- political and economic instability;
- difficulties in protecting our intellectual property;

- problems with the transportation or delivery of our products;
- longer payment cycles and greater difficulty in collecting accounts receivable;
- compliance with trade, technical standards and other laws in a variety of jurisdictions;
- difficulties in staffing and managing international operations; and
- adverse global economic conditions.

These factors may materially adversely affect our business, results of operations or financial condition. To the extent practicable, we seek to proactively reduce our exposure to these risks where possible, but we may not be successful. For example, we use foreign currency forward contracts to reduce our exposure to foreign currency exchange rate fluctuations. The objective of these contracts is to reduce the impact of foreign currency exchange rate movements on our operating results and on our foreign currency denominated monetary assets and liabilities. We do not use these contracts for speculative or trading purposes. We cannot assure you that these activities will be successful in reducing our foreign currency exchange rate exposure. If these activities are unsuccessful, our financial condition could be materially adversely affected. In addition, our compliance with foreign laws, regulations and similar requirements may be onerous and expensive, and these laws and regulations may be inconsistent from jurisdiction to jurisdiction, further increasing the cost and difficulty of compliance. Any such costs could individually or in the aggregate make our products and services less attractive to our customers, delay the introduction of new products in one or more regions, or cause us to change or limit our business practices. We have implemented policies and procedures designed to ensure compliance with these laws and regulations, but there can be no assurance that our employees, contractors, or agents will not violate such laws and regulations or our policies.

We may not satisfy the covenants, financial ratio tests and incurrence limitations in our debt instruments, which if not met, could have a material adverse effect on us.

Our bank agreements require us to comply with covenants, financial ratio tests and incurrence limitations. We cannot assure you that we will be able to satisfy or comply with these covenants, financial ratio tests and incurrence limitations, because our ability to do so may be affected by events beyond our control. If we fail to satisfy or comply with the covenants, financial ratio tests and incurrence limitations, or if we disagree with our lenders about whether or not we are in compliance, we cannot assure you that we will be able to obtain waivers or amendments if required to avoid a default. A breach of any of the provisions, covenants, financial ratio tests or incurrence limitations under our debt instruments could prevent us from being able to draw down under our bank loans or result in an event of default under the applicable agreement, which in turn could trigger cross defaults under other debt instruments, any of which would materially adversely affect us.

Our reliance on third party manufacturers for scale and cost benefits entails risks that could materially adversely affect us.

We currently have, and plan in the future to enter into, foundry, subcontractor and other arrangements with third parties to meet demand for our products. Third party manufacturers we currently use or expect to use in the future for foundry and other manufacturing services include SK Hynix, Semiconductor Manufacturing International Corporation (SMIC), Wuhan Xinxin Semiconductor Manufacturing Corporation (XMC), Fujitsu Semiconductor Limited (FSL), and United Microelectronics Corporation (UMC). We also use independent contractors to perform some of the assembly, testing and packaging of our products, including ChipMOS Technologies Inc. and J-Devices Corporation. We depend on these manufacturers to allocate to us a portion of their manufacturing capacity sufficient to meet our needs. Just as we are generally under no obligation to provide any specified minimum purchase quantities, third party manufacturers are generally under no obligation to provide us with any specified minimum quantity of product. We also depend on these manufacturers to produce products of acceptable quality and at acceptable manufacturing yields and to deliver those products to us on a timely basis at acceptable prices. In addition, we rely on these manufacturers to invest capital into their facilities and process technologies to meet our needs for new products using advanced process technologies. We also cannot assure you that these manufacturers will be able to meet our near-term or long-term manufacturing requirements and that we will be able to attain qualification from our customers, which may be required prior to production of products at a third party facility. In addition, any significant change in the payment terms we have with these manufacturers could adversely affect us.

Third party manufacturers with whom we contract also make products for other companies, including certain of our competitors, and/or for themselves and could choose to prioritize capacity for themselves or other customers beyond any minimum guaranteed amounts, reduce deliveries to us or, in the absence of price guarantees, increase the prices they charge us on short notice, such that we may not be able to pass cost increases on to our customers. We may be unable to secure an alternative supply for specific products in a short timeframe or at all at an acceptable cost to satisfy our production requirements. In addition, we may be required to incur additional development, manufacturing and other costs to establish alternative sources of supply. Other risks associated with our increased dependence on

third party manufacturers include: their ability to adapt to our proprietary technology; reduced control over delivery schedules, quality assurance, manufacturing yields and cost; misappropriation of our intellectual property; their solvency; reduced ability to manage inventory and parts; and risks associated with operating in foreign countries. If we are unable to secure sufficient or reliable suppliers of wafers or obtain the necessary assembly, testing and packaging services, our ability to meet customer demand for our products may be adversely affected, which could have a material adverse effect on us.

Unless we maintain manufacturing efficiency, we may not continue to be profitable and our future profitability could be materially adversely affected.

The semiconductor industry is characterized by rapid technological changes. For example, new manufacturing process technologies using smaller feature sizes and offering better performance characteristics are generally introduced every one to two years. The introduction of new manufacturing process technologies allows us to increase the functionality of our products while at the same time optimizing performance parameters and, for flash memory, increasing storage capacity. In addition, the reduction of feature sizes enables us to produce smaller chips offering the same functionality and thereby considerably reducing the cost. In order to remain competitive, it is essential that we secure the capabilities to develop and qualify new manufacturing process technologies. For example, our leading NOR flash memory products must be manufactured at 45-nanometer and more advanced process technologies. If we are delayed in transitioning to these technologies and other future technologies, we could be materially adversely affected. If we are delayed in transitioning to these technologies and other future technologies, we could be materially adversely affected. In addition, some competitors for our microcontroller and analog products have developed and have access to more advanced processes than we do. For example, while some of our competitors manufacture on 300mm wafer technology, some of our internal production is manufactured on 200mm wafers, and may be on less advanced process nodes. If we are delayed in transitioning to newer technologies, or unable to take advantage of larger wafer production in a timely manner, we could be materially adversely affected.

Manufacturing our products involves highly complex processes that require advanced equipment. We continuously modify our manufacturing processes in an effort to improve yields and product performance and decrease costs. Improving our manufacturing efficiency in future periods is dependent on our ability to:

- develop advanced process technologies and advanced products that utilize those technologies;

- successfully transition to advanced process technologies;

- continue to reduce test times;

- ramp product and process technology improvements rapidly and effectively to commercial volumes;

- achieve acceptable levels of manufacturing wafer output and yields, which may decrease as we implement more advanced technologies; and

- maintain our quality controls and rely upon the quality and process controls of our suppliers.

Our manufacturing efficiency is an important factor in achieving profitability, and we cannot be sure that we will be able to maintain or increase our manufacturing efficiency to the same extent as our competitors. A failure to do so could adversely impact our relationships with customers, cause harm to our reputation in the marketplace, cause customers to move future business to our competitors or cause us to make financial concessions to our customers, in which case our business could be materially adversely affected.

Our revenue reporting is highly dependent on sales information from our distributors, and our financial reporting could be misstated if such information is not accurate and timely.

Our revenue reporting is highly dependent on receiving accurate and timely sell-through data from our distributors. As our distributors resell products, they provide us with data regarding the products sold, prices, quantities, end customers, and the amount of our products they still have in stock. The data we receive is voluminous and complex, and we must use estimates and apply judgments to reconcile distributors' reported inventories to their sell-through activities. Actual results could vary unfavorably from our estimates, which could affect our operating results and could adversely affect our business.

Our ability to generate sufficient operating cash flows depends in part on maintaining our low cost strategy.

Our ability to generate operating cash flows depends in large part on the maintenance of a low cost strategy. As part of our strategy, we intend to continue our cost reduction efforts which have included restructuring and technology development agreements. Cost reduction activities may require initial cash outlays before the anticipated benefits are realized. We cannot assure you that we will be able to achieve anticipated expense reductions. If our low cost strategy is unsuccessful, our operating results and business may be materially adversely affected. Furthermore, in certain instances our cost reductions may make it more difficult for us to succeed in the extremely competitive semiconductor market.

If essential equipment or adequate supplies of satisfactory materials are not available to manufacture our products, we could be materially adversely affected.

Our manufacturing operations depend upon obtaining deliveries of equipment and adequate supplies of materials on a timely basis. We purchase equipment and materials from a number of suppliers. From time to time, suppliers may extend lead times, limit supply to us or increase prices due to capacity constraints or other factors. Because the equipment we use is complex and highly customized, it may be difficult for us to substitute one supplier for another or one piece of equipment for another. Some raw materials used in the manufacture of our products are available from a limited number of suppliers or only from a particular region. In addition, we purchase raw materials such as gold for which prices on the world markets have fluctuated significantly during recent periods. Our manufacturing operations also depend upon the quality and usability of the material inputs, including raw materials and wafers received from our suppliers. If the materials we receive from our suppliers do not meet our manufacturing requirements or product specifications, are not obtained in a timely manner or if there are significant increases in costs of materials, we may be materially adversely affected.

In addition, some of our suppliers may also be our competitors. Interruption of supply or increased demand in the industry could cause shortages and price increases in various essential materials. If we are unable to procure these materials we may have to reduce our manufacturing operations or our manufacturing yields may be adversely affected. Such a reduction and yield issues could have a material adverse effect on us.

We cannot be certain that we will have sufficient resources to invest in the level of research and development required to remain competitive or that our substantial research and development investments will lead to timely improvements in technology needed to successfully develop, introduce and commercialize new products and technologies.

The semiconductor industry is highly competitive and subject to rapid technological change. In order to compete, we are required to make substantial investments in research and development for product design, process technologies and production techniques in an effort to design and manufacture advanced and innovative products.

Our success depends to a significant extent on our ability to develop, qualify, produce, introduce and gain market acceptance of new product designs and improvements that provide value to customers. Our ability to develop and qualify new products and related technologies to meet evolving industry requirements at prices acceptable to our customers and on a timely basis is critical to our competitiveness in our target markets. If we are delayed in developing or qualifying new products or technologies, we could be materially adversely affected.

In order to grow and diversify our microcontroller business, we may need to manufacture products on significantly more advanced process technologies than are used in our microcontroller products today in order to achieve higher performance, enhanced capabilities such as greater code and data storage integrated on the die and lower costs. For example, some of our competitors have 40-nanometer class process technologies in production today and are developing more advanced process technologies at smaller process nodes. We are developing 40-nanometer class technology in a joint development with UMC, including the ability to integrate our embedded Charge Trap (eCT) flash memory technology. Delays in developing this technology or in the availability of products based on this technology could materially adversely affect us. In our MCA business we will compete with well-established, significantly larger competitors with the ability to deploy significantly greater resources than our own, to address automotive and other broader market applications. We cannot assure you that we will have sufficient resources independently or through joint development agreements to maintain the level of investment in research and development that is required for us to remain competitive and to grow and diversify our microcontroller or MCA businesses, which could materially adversely affect us.

Our strategy is to increasingly seek to share research and development costs with third parties. However, we cannot assure you that we will be able to negotiate arrangements for our research and development needs, or that such arrangements will result in commercially successful technology and products in a timely manner or at all. We will be dependent on the third parties in such agreements to continue to invest financial and skilled human resources, and we cannot assure you that such third parties will make the necessary investments, the absence of which would materially adversely affect our business.

Competitors may introduce new memory or other technologies that may make our flash memory products uncompetitive or obsolete, or may create new microcontroller or analog products with configurations, capabilities

and features that are more desirable than ours.

Our flash memory competitors are working on a number of potentially competitive technologies compared to the industry standard floating gate and MirrorBit flash memory technologies utilized today. If products based on these new technologies are successfully developed and commercialized as a viable alternative to floating gate or MirrorBit flash memory, these products could pose a competitive threat to existing flash memory companies, including us. We may be materially adversely affected by loss of our existing market share due to such competition.

In our MCA business, we compete with well-established, significantly larger competitors with the ability to deploy significantly greater resources than our own to address automotive and other broader market applications. If we are unable to develop new and innovative products to compete, or unable to develop such new products in a sufficient number of variations and with desirable features and capabilities to meet our customers' needs, we may be materially adversely affected.

Our cash requirements may require us to seek additional financing, which may not be available to us.

Our debt facilities may not be sufficient for our future working capital, investments and cash requirements, in which case we would need to seek additional financing or scale back our operations. We may not be able to access additional financing resources due to a variety of reasons, including the restrictive covenants in our lending agreements and the lack of available capital due to tight global credit markets. If our financing requirements are not met and we are unable to access additional financing, our business, operations, financial condition and cash flows will be materially adversely affected.

If we cannot adequately protect our technology or other intellectual property in the United States and abroad, through patents, copyrights, trade secrets, trademarks, litigation and other measures, we may lose a competitive advantage and incur significant expenses as a result of litigation and other claims.

We rely on a combination of protections provided by contracts, including confidentiality and non-disclosure agreements, copyrights, patents, trademarks and common law rights, such as trade secrets, to protect our intellectual property. However, we cannot assure you that we will be able to adequately protect our technology or other intellectual property from third party infringement or from misappropriation in the United States and abroad. Any patent owned or licensed by us or issued to us could be challenged, invalidated or circumvented or rights granted under these patents or licenses may not provide a competitive advantage to us. Furthermore, patent applications that we file may not result in issuance of a patent or, if a patent is issued, the patent may not be issued in a form that is advantageous to us. Despite our efforts to protect our intellectual property rights, others may independently develop similar products, duplicate our products or design around our patents and other intellectual property rights. In addition, it is difficult to monitor compliance with, and enforce, our intellectual property rights on a worldwide basis in a cost-effective manner. Foreign laws may provide less intellectual property protection than is afforded in the United States. Our efforts to protect our intellectual property in the United States and abroad through lawsuits may be time-consuming and costly.

We provide indemnities relating to non-infringement of patents and other intellectual property indemnities to certain of our customers in connection with the delivery, design, manufacture and sale of our products. If we incur substantial costs in connection with any claim pursuant to such indemnification, our business, results of operations and financial condition could be materially adversely affected.

If we cannot adequately protect our technology or other intellectual property rights in the United States and abroad, we may be materially adversely affected.

We may be involved in intellectual property litigation in the future that could be found to have infringed on intellectual property rights.

Technology companies, including many of our competitors, frequently enter into litigation based on allegations of patent infringement or other violations of intellectual property rights. In addition, patent holding companies seek to monetize patents they have purchased or otherwise obtained often without regard to their use of these patents for the production and sale of products.

We are subject, and may become subject in the future, to claims in the future and may be required to enter into other litigation and, defend against such actions in courts and before the U.S. International Trade Commission, as well as

internationally in Europe and Asia. For more information, see “Part I, Item 3. Legal Proceedings,” in this Annual Report on Form 10-K. The plaintiffs in these actions frequently seek injunctions and substantial damages. Regardless of the scope or validity of such patents or other intellectual property rights, or the merits of any claims by potential or actual litigants, we may have to engage in protracted litigation. Such litigation is often expensive, time-consuming, disruptive to operations, and distracting to management. In recognition of these considerations, we may decide to enter into arrangements to settle litigation. If we are found to infringe on one or more patents or other intellectual property rights, regardless of whether we can develop non-infringing technology, we may be required to pay substantial damages or royalties to a third party or we may be subject to a temporary or permanent injunction prohibiting us from marketing or selling certain products. In certain cases, we may consider the desirability of entering into licensing agreements, although no assurance can be given that such licenses can be obtained on acceptable terms or that litigation will not occur. Any such licenses may also significantly increase our operating expenses. The outcome of any litigation is inherently uncertain and if the outcome is unfavorable to us, we may incur a material loss, or a material loss in excess of a recorded accrual, with respect to loss contingencies, including matters related to infringement of intellectual property rights and we could be materially adversely affected.

If our security measures are breached and unauthorized access is obtained to our information technology systems, we may lose proprietary data.

Our security measures may be breached as a result of third party action, including computer hackers, employee error, malfeasance or otherwise, and result in unauthorized access to our customers’ data or our data, including our intellectual property and other confidential business information, or our information technology systems. Because the techniques used to obtain unauthorized access, or to sabotage systems, change frequently, we may be unable to anticipate these techniques or to implement adequate preventative measures. Any security breach could result in disclosure of our trade secrets, confidential customer, supplier or employee data, which could result in legal liability, harm to our reputation and otherwise harm our business.

Our stock price may be volatile, and stockholders may lose all or part of their investment.

The market price of our common stock has been volatile and may in the future be subject to wide fluctuations in response to many risk factors listed in this section, and others beyond our control, including:

- actual or anticipated changes in our operating results;
- changes in financial estimates by securities analysts;
- fluctuations in the valuation of companies perceived to be comparable to us;

-

announcements by us or our competitors of significant acquisitions, strategic partnerships, divestitures, joint ventures or other strategic initiatives;

• unfavorable results in litigation; and

• stock price and volume fluctuations attributable to inconsistent trading volume levels or other factors.

Furthermore, the stock markets have experienced extreme price and volume fluctuations that have affected and continue to affect the market prices of equity securities of many companies. These fluctuations often have been unrelated or disproportionate to the operating performance of those companies. These broad market and industry fluctuations, as well as general economic, political and market conditions such as recessions, interest rate changes or international currency fluctuations, may negatively impact the market price of shares of our common stock. In the past, companies that have experienced volatility in the market price of their stock have been subject to securities class action litigation. Securities litigation against us could result in substantial costs and divert our management's attention from other business concerns.

Our ability to utilize our net operating loss carry-forwards and certain other tax attributes in the future may be impaired.

Pursuant to U.S. federal and state tax rules, a corporation is generally permitted to deduct from taxable income in any year net operating losses (NOLs) carried forward from prior years. We have U.S federal NOL carry forwards of approximately \$1,024.3 million as of December 29, 2013. Approximately \$489.7 million of the federal NOL carry forwards are subject to an annual limitation of \$27.2 million. These NOLs, if not utilized, expire from 2016 to 2033. In addition, our ability to utilize unlimited federal NOL carry forwards could be subject to a significant limitation if we were to undergo an "ownership change" for purposes of Section 382 of the Internal Revenue Code of 1986, as amended.

We may in the future incur impairments to goodwill or long-lived assets.

Our assets include significant amounts of goodwill and other intangible assets. We review our long-lived assets, including these assets, for impairment annually in the fourth fiscal quarter or whenever events or changes in circumstances indicate that the carrying amount of those assets may not be recoverable. Factors that may be considered in assessing whether goodwill or intangible assets may not be recoverable include a decline in our stock price or market capitalization, reduced estimates of future cash flows and slower growth rates in our industry. Because we operate in highly competitive environments, actual operating results and cash flows may vary significantly from projections thereof. . Any such changes could result in our recording impairment charges that adversely affect our results of operations.

Our success depends on our key personnel and the loss of key personnel could disrupt our business.

Our success greatly depends on the continued contributions of our senior management and other key research and development, sales, marketing and operations personnel. In addition, our success will depend on our ability to recruit and retain additional highly-skilled personnel. We have relied on equity awards in the form of stock options and

restricted stock units as one means for recruiting and retaining highly skilled talent and a reduction in our stock price may reduce the effectiveness of those awards used for retaining employees. The loss of key personnel could disrupt or adversely affect our business.

Costs related to defective products could have a material adverse effect on us.

One or more of our products may be found to be defective or we may initiate voluntary recalls of products after they have been shipped to customers in volume. We generally provide a limited warranty with respect to our products. Accordingly, if we recall products or are forced to replace defective products, the cost of product replacements or product returns may be substantial, and our reputation with our customers could be damaged. In addition, we could incur substantial costs to implement modifications to fix defects.

We are subject to a variety of environmental laws that could result in liabilities.

Our properties and many aspects of our business operations are subject to various domestic and international environmental laws and regulations, including those relating to materials used in our products and manufacturing processes; chemical use and handling; waste minimization; discharge of pollutants into the environment; the treatment, transport, storage and disposal of solid and hazardous wastes; and remediation of contamination. Certain of these laws and regulations require us to obtain permits for our operations, including permits related to the discharge of air pollutants and wastewater. From time to time, our facilities are subject to investigation by governmental regulators. Any failure to comply with applicable environmental laws, regulations or permits may subject us to a range of consequences, including fines, suspension of production, alteration of manufacturing processes, sales limitations, and criminal and civil liabilities or other sanctions. We could also be held liable for any and all consequences arising out of exposure to hazardous materials used, stored, released, disposed of by us or located at or under our facilities, or for other environmental or natural resource damage.

Certain environmental laws, including the U.S. Comprehensive Environmental Response, Compensation and Liability Act of 1980, or the Superfund Act, impose joint and several liabilities on current and previous owners or operators of real property for the cost of removal or remediation of hazardous substances and costs related to damages to natural resources. One of former our properties is listed on the U.S. Environmental Protection Agency's Superfund National Priorities List. However, other parties currently are responsible for all investigation, cleanup and remediation activities. We have not been named a responsible party at any Superfund or other contaminated site. If we were ever so named, costs associated with the cleanup of the site could be material. Additionally, contamination that has not yet been identified could exist at one or more of our facilities, and identification of such contamination could have a material adverse effect on us.

Future environmental regulations could require us to procure expensive pollution abatement or remediation equipment; to modify product designs; or to incur other expenses associated with compliance with such regulations. For example, the European Union and China impose stricter requirements regarding reduced lead content in semiconductor packaging. Therefore, we cannot assure you that our costs of complying with current and future environmental and health and safety laws, or liabilities arising from past or future releases of, or exposure to, hazardous substances, will not have a material adverse effect on our business.

Provisions in our corporate governance documents as well as Delaware law may delay or prevent an acquisition of us that stockholders may consider favorable.

Our certificate of incorporation and bylaws and Delaware law contain provisions that could make it more difficult for a third party to acquire us without the consent of our board of directors. These provisions include restrictions on the ability of our stockholders to remove directors, a classified board of directors and limitations on action by our stockholders by written consent. In addition, our board of directors has the right to issue preferred stock without stockholder approval, which could be used to make an acquisition of us more difficult. Although we believe these provisions protect our stockholders from coercive or otherwise unfair takeover tactics and thereby provide for an opportunity to receive a higher bid by requiring potential acquirers to negotiate with our board of directors, these provisions apply even if the offer may be considered beneficial by some stockholders.

Regulations related to disclosure requirements regarding conflict minerals may force us to incur additional compliance expenses, may make our supply chain more complex.

On August 22, 2012, as mandated by the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010, the SEC adopted new disclosure regulations for public companies that manufacture products that contain certain minerals and their derivatives, namely tin, tantalum, tungsten or gold, known as conflict minerals, if these minerals are necessary to the functionality or production of the company's products. These regulations require such issuers to report annually whether or not such minerals originate from the Democratic Republic of Congo ("DRC") and adjoining countries and in some cases to perform extensive due diligence on their supply chains for such minerals. The

implementation of these new requirements could adversely affect the sourcing, availability and pricing of conflict minerals used in the manufacture of semiconductor devices, including our products. In addition, we may incur additional costs to comply with the disclosure requirements, including costs related to determining the source of any of the relevant minerals used in our products. Since our supply chain is complex, the due diligence procedures that we implement may not enable us to ascertain the origins for these minerals or determine that these minerals are DRC conflict free, which may harm our reputation. We may also face difficulties in satisfying customers who may require that our products be certified as DRC conflict free, which could harm our relationships with these customers and lead to a loss of revenue. These new requirements also could have the effect of limiting the pool of suppliers from which we source these minerals, and we may be unable to obtain conflict-free minerals at competitive prices, which could increase our costs and adversely affect our manufacturing operations and our profitability.

ITEM 1B. UNRESOLVED STAFF COMMENTS

None.

ITEM 2. PROPERTIES

Our principal engineering, manufacturing and administrative facilities as of December 29, 2013, comprised approximately 2.8 million square feet and are located in the United States, Europe, Middle East and Asia. Over 2.5 million square feet of this space is in buildings we own in Sunnyvale, California; Austin, Texas; Penang, Malaysia; and Bangkok, Thailand.

All of our other engineering and administrative facilities are leased. We lease approximately 318,833 square feet of office and warehouse space in United States, Europe and Asia. Our Fab 25 facility in Austin, Texas is encumbered by liens securing our Senior Secured Term Loan facility (Term Loan) and revolving credit facilities. See Part II, Item 7 “Management’s Discussion and Analysis of Financial Condition and Results of Operations—Contractual Obligations.”

On January 23, 2014, we completed the sale of real property in Sunnyvale, California, for a consideration of \$60.0 million. Pursuant to the sale, we will be relocating our offices and facilities to a new location in Silicon Valley, California. Beginning January 23, 2014, we have entered into a lease of the property and have the option to leaseback for up to 24 months from that date.

ITEM 3. LEGAL PROCEEDINGS

In the Matter of Certain flash memory chips and Products Containing the Same, Investigation No. 337-TA-893, filed on August 1, 2013 and instituted on September 9, 2013.

On August 1, 2013, Spansion LLC, a wholly owned subsidiary of the Company, filed a complaint pursuant to Section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. § 1337 (“Section 337”), to request ITC institute an investigation relating to the unlawful importation into the United States, the sale for importation, and/or the sale within the United States after importation of certain Macronix flash memory chips (“Macronix Chips”) that infringe the Company’s valid patents, and/or are made, produced or processed under, or by means of, a process covered by the claims of the Company’s patents, and products containing the Macronix Chips.

On September 9, 2013, the ITC instituted its investigation. Other than the Company, the principal parties, or respondents in the investigation are Macronix International Co, Ltd., of Hsin-chu, Taiwan; Macronix America, Inc., of Milpitas, CA; Macronix Asia Limited of Kanagawa Pref., Japan; Macronix (Hong Kong) Co., Ltd., of Sa Tin, N.T.,

Hong Kong; Acer Inc. of New Taipei City, Taiwan; Acer America Corporation of San Jose, CA; ASUSTek Computer Inc. of Taipei, Taiwan; Asus Computer International of Fremont, CA; Belkin International, Inc., of Playa Vista, CA; D-Link Corporation of Taipei City, Taiwan; D-Link System, Inc., of Fountain Valley, CA; Netgear Inc., San Jose, CA; Nintendo Co., Ltd., of Kyoto, Japan; and Nintendo of America, Inc., of Redmond, WA.

Through this investigation, the Company seeks a general exclusion order to exclude from importation all infringing Macronix Chips and downstream products containing such chips. In the event that the ITC is unwilling to issue a general exclusion order, the Company seeks that a limited exclusion order be entered against each named Respondent and its subsidiaries and affiliates in order to remedy the Respondents' violation of Section 337 and to prevent such future violations by Respondents. The Company has also asked the ITC to issue a cease and desist order to ensure compliance with the requested exclusion orders.

Spansion LLC v. Macronix International Co., Ltd. et. al., U.S. District Court, Northern District of California.

On August 1, 2013, Spansion LLC filed a complaint in the U.S. District Court, Northern District of California (San Jose Division), case no. 3:13-cv-03566-JST, against Macronix International Co., Ltd., Macronix America, Inc., Acer Inc., Acer America Corporation, ASUSTek Computer Inc., Asus Computer International (America), Belkin International, Inc., D-Link Systems, Inc., NETGEAR Inc., Nintendo Co., Ltd., and Nintendo of America, Inc. for patent infringement. Spansion has asked for monetary damages as well as permanent injunctive relief to prevent further infringing activity.

On August 29, 2013, the Company amended its original complaint to delete certain defendants, resulting in the eleven party defendants identified above ("Defendants"), and to make certain additional allegations.

On October 8, 2013, pursuant to 28 U.S.C. § 1659, each of the Defendants asserted its statutory right to a mandatory stay of all proceedings in the Northern District of California action until the determination of the ITC becomes final (see *In the Matter of Certain flash memory Chips and Products Containing the Same*, Investigation No. 337-TA-893, U.S. International Trade Commission, above). Because the requested stay is mandated by statute, the Company did not oppose the motion and the requested stay was granted.

Macronix International Co., LTD. v. Spansion Inc. et. al., U.S. District Court, Eastern District of Virginia.

On October 2, 2013, Macronix International Co., Ltd. filed a complaint in the U.S. District Court, Eastern District of Virginia, case no. 3:13-cv-679-REP, against Spansion Inc. and Spansion LLC for patent infringement. The Company has filed an answer to the complaint as well as motions to dismiss and to transfer jurisdiction. The complaint seeks unspecified monetary damages as well as injunctive relief.

On February 20, 2014 the court held the initial case management conference for this matter and set trial for January 20, 2015. The court has not yet ruled on Spansion's pending motions to transfer or dismiss. For that reason, the trial date is subject to change.

In the Matter of Certain flash memory chips and Products Containing the Same, Investigation No.337-TA-909, filed on December 27, 2013.

On December 27, 2013, Macronix International Co., Ltd. and Macronix America, Inc., filed a complaint pursuant to Section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. § 1337 ("Section 337"), to request that the U.S. International Trade Commission ("ITC") institute an investigation relating to the importation into the United States, the sale for importation, and/or the sale within the United States after importation of certain non-volatile memory products ("Spansion Chips") and products containing the Spansion Chips. A revised complaint was filed on December 31, 2013, and a letter supplementing the revised complaint was filed on January 14, 2014. The revised complaint alleges that the Spansion Chips infringe the claims of certain patents owned by Macronix ("Macronix Patents"), and/or are made, produced or processed under, or by means of, a process covered by the claims of the Macronix Patents.

On January 29, 2014, the Commission instituted its investigation. Other than the Company, the principal parties, or respondents in the investigation are Beats Electronics LLC of Santa Monica, CA, Delphi Automotive PLC of Kent, United Kingdom, Delphi Automotive Systems, LLC of Troy, Michigan, Harman International Industries, Inc. of Stamford, CT, Harman Becker Automotive Systems, Inc. of Farmington Hills, MI, Harman Becker Automotive Systems GmbH of Karlsbad, Germany, Ruckus Wireless, Inc. of Sunnyvale, CA and Tellabs, Inc. of Naperville, IL.

Through this investigation, Macronix seeks a general exclusion order to exclude from importation all infringing Spansion Chips and downstream products containing such chips. In the event that the ITC is unwilling to issue a general exclusion order, Macronix seeks that a limited exclusion order be entered against each named Respondent and its subsidiaries and affiliates in order to remedy the Respondents' violation of Section 337 and to prevent such future violations by Respondents. Macronix has also asked the ITC to issue a cease and desist order to ensure compliance with the requested exclusion orders.

Others

Besides the above, the Company is a defendant or plaintiff in various legal actions that arose in the normal course of business. In the opinion of management, the aggregate liability, if any, with respect to these matters will not have a material adverse effect on the Company's financial condition, result of operations or cash flows.

ITEM 4. MINE SAFETY DISCLOSURES

None.

20

PART II**ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES****Market Price of Common Stock**

The following table sets forth the high and low per share sales prices for our Class A common stock traded in The New York Stock Exchange or NYSE under the symbol "CODE".

Fiscal Year Ended December 29, 2013	High	Low
Fourth Quarter	\$13.56	\$9.90
Third Quarter	\$13.23	\$9.70
Second Quarter	\$13.88	\$10.66
First Quarter	\$14.54	\$11.05

Fiscal Year Ended December 30, 2012	High	Low
Fourth Quarter	\$13.82	\$10.24
Third Quarter	\$13.46	\$9.42
Second Quarter	\$12.62	\$9.76
First Quarter	\$13.45	\$7.70

As of February 20, 2014, there were 629 holders of record of our Class A common stock. Because many of our shares are held by brokers and other institutions on behalf of stockholders, we are unable to estimate the total number of stockholders represented by these record holders. The closing sale price of our Class A Common Stock on February 20, 2014 was \$16.33 per share.

We do not plan to pay dividends on shares of our Class A common stock in the foreseeable future and are currently prohibited from doing so in specific circumstances under agreements governing our borrowing arrangements.

Stock Performance Graph

This performance graph shall not be deemed “filed” for purposes of Section 18 of the Securities Exchange Act of 1934, as amended (the Exchange Act), or incorporated by reference into any filing of Spansion under the Securities Act of 1933, as amended, or the Exchange Act, except as shall be expressly set forth by specific reference in such filing.

The following graph shows a comparison from May 10, 2010 , the date we emerged from Chapter 11 bankruptcy proceedings, including from May 18, 2010, (the date our Class A common stock commenced trading), through December 29, 2013 of the cumulative total return for our Class A common stock (CODE), the NYSE Composite Index and the S&P Semiconductors Index. Such returns are based on historical results and are not intended to suggest future performance. Data for the NYSE Composite Index and the S&P Semiconductors Index assume reinvestment of dividends

ITEM 6. SELECTED FINANCIAL DATA

The following summary historical financial data should be read in conjunction with “Management’s Discussion and Analysis of Financial Condition and Results of Operations” and our consolidated financial statements and related notes included elsewhere in this Annual Report on Form 10-K.

The following table sets forth our selected financial data. Fiscal 2012 is a 53-week year. All other periods presented are fiscal years and include 52-weeks each.

	Successor (1)	Successor (1)	Successor (1)	Successor (1)	Predecessor (1)	Predecessor (1)
	Year Ended	Year Ended	Year Ended	Period from May 11, 2010 to December 26, 2010	Period from December 28, 2009 to May 10, 2010	Year Ended
	December 29, 2013	December 30, 2012	December 25, 2011			December 27, 2009
(in thousands, except per share amounts)						
Statement of Operations Data:						
Net sales	\$971,690	\$915,932	\$1,069,883	\$759,886	\$324,914	\$1,061,487

	December 29, 2013	December 30, 2012	December 25, 2011	December 26, 2010	December 27, 2009
Balance Sheet Data:					
Cash, cash equivalents and marketable securities	\$ 311,497	\$ 313,897	\$ 262,705	\$ 354,273	\$ 425,238
Working capital	397,711	481,512	395,565	439,972	553,023
Total assets	1,380,921	1,172,166	1,191,145	1,399,305	1,437,977
Long-term debt and capital lease obligations, including current portion, short term note, and notes payable to banks under revolving loans	501,932	416,295	449,399	454,909	64,150
Liabilities subject to compromise	-	-	-	-	987,127
Total stockholders' equity (deficit)	\$ 537,460	\$ 561,774	\$ 522,541	\$ 624,285	\$ (857,693)

References to the "Predecessor" refer to Spansion and its consolidated subsidiaries up to May 10, 2010. References to "Successor" refer to Spansion and its consolidated subsidiaries after May 10, 2010 after giving effect to: (i) the (1) cancellation of Old Common Stock issued prior to May 10, 2010; (ii) the issuance of New Common Stock and settlement of existing debt and other adjustments in accordance with the Plan of Reorganization confirmed by the U.S. Bankruptcy Court on April 16, 2010; and (iii) the application of fresh start accounting.

(2) The gain of \$28.4 million, net of selling expenses was recognized on the sale of our Kuala Lumpur, Malaysia facility in the second quarter of fiscal 2012.

(3) The 2011 Restructuring Plan was initiated in the fourth quarter of fiscal 2011 to align the business with market conditions. The 2013 Restructuring Plan, beginning in the third quarter of 2013, was implemented to rationalize our global workforce. Please refer to Note 17 for explanation of restructuring charges.

(4) The asset impairment charge for fiscal 2009 includes pre-tax impairment on an equity investment and loan to an investee.

(5) Contractual interest expense for the year ended December 27, 2009 was approximately \$89.4 million.

The provision for income taxes in fiscal 2009 includes a decrease of \$457.9 million in valuation allowances against deferred tax assets in Spansion Japan resulting from the deconsolidation of Spansion Japan in March 2009.

(6) However, the decrease in the amount of deferred tax assets had no impact on the provision for income taxes since the deferred tax assets had a full valuation allowance.

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following discussion of our financial condition and results of operations should be read in conjunction with the consolidated financial statements and related notes as of December 29, 2013 and December 30, 2012 and for the fiscal years ended December 29, 2013, December 30, 2012 and December 25, 2011, which are elsewhere in this Annual Report on Form 10-K.

Executive Summary

We are a leading designer, manufacturer and developer of embedded systems semiconductors, which include flash memory, microcontroller, mixed-signal, and analog products, and embedded system-on-chip solutions. Our leading-edge intellectual property and products are driving the development of high quality, reliable and economical devices that are high performance, intelligent, efficient and secure.

The embedded markets we focus on such as transportation, industrial, consumer, communications and gaming require high performance and high reliability flash memory solutions, microcontroller, mixed-signal, and analog products, and other programmable semiconductors that run applications in a broad range of electronic systems. Our focus markets are generally characterized by longer design and product life cycles, relatively stable pricing, more predictable supply-demand outlook and lower capital investments.

Within this embedded industry, we serve a well-diversified customer base through a predominantly differentiated, non-commodity, service oriented model that strives to meet our customers' needs. Our embedded solutions are incorporated in products manufactured by leading OEMs. In many cases, embedded customers require products with specific feature sets and wide operating temperatures to allow their products to work in extreme conditions. Some embedded customers require product availability from suppliers for over a decade of production. We spent many years refining the product and service strategy to address these market requirements and deliver products that go into a broad range of electronic applications such as automobiles, airplanes, set top boxes, games, telecommunications equipment, smart meters, factory automation and medical devices.

Our products are designed to accommodate various voltage, interface and density requirements for a wide range of applications and customer platforms. The majority of our NOR flash memory product designs are based on our proprietary two-bit-per-cell MirrorBit® technology, which has a simpler cell architecture, higher yields and lower costs than competing floating gate NOR Flash memory technology. While historically we are known for our NOR

products, we have been expanding our portfolio in the areas of NAND flash memory, microcontroller, mixed-signal, and analog products, as well as programmable system solutions or embedded system-on-chip solutions to broaden our customer engagement and bring differentiated products to embedded markets. In support of this strategy, we acquired the MCA business of FSL on August 1, 2013, for a purchase consideration of \$150.0 million, net of cash.

In addition to our products, we generate revenue by licensing our intellectual property to third parties and we assist our customers in developing and prototyping their designs by providing software and hardware development tools, drivers and simulation models for system-level integration.

We are headquartered in Silicon Valley in California, with research and development, manufacturing, assembly and sales operations in the United States, Asia, Europe and the Middle East. We own and operate a wafer fabrication facility in Austin, Texas and a final manufacturing facility in Bangkok, Thailand. Final manufacturing consists of assembly, test, mark and pack operations. We also own a manufacturing facility in Penang, Malaysia, which does small volumes of sort and pack operations. For geographical information with respect to our sales and assets refer to Note 18 of Consolidated Financial Statements.

We were incorporated in Delaware in 2005. Our mailing address and executive offices are located at 915 DeGuigne Drive, Sunnyvale, California 94085, and our telephone number is (408) 962-2500. References in this report to “Spansion,” “we,” “us,” “our,” or the “Company” shall mean Spansion Inc. and our consolidated subsidiaries, unless the context indicates otherwise. We are subject to the information and periodic reporting requirements of the Securities Exchange Act of 1934, as amended or Exchange Act, and, in accordance therewith, file periodic reports, proxy statements and other information with the Securities and Exchange Commission, or SEC. Such periodic reports, proxy statements and other information are available for inspection and copying at the SEC’s Public Reference Room at 100 F Street, NE., Washington, DC 20549 or may be obtained by calling the SEC at 1-800-SEC-0330. In addition, the SEC maintains a website at <http://www.sec.gov> that contains reports, proxy statements and other information regarding issuers that file electronically with the SEC. We also post on the Investor Relations section of our website, <http://www.spansion.com>, under “*Financial Information*” a link to our filings with the SEC. We post our Code of Ethics for our Chief Executive Officer, Chief Financial Officer, Corporate Controller and other Senior Finance Executives, our Code of Business Conduct, which applies to all directors and all our employees, and the charters of our Audit, Compensation and Nominating and Corporate Governance committees under “*Corporate Governance*” on the Investor Relations section of our website. Our filings with the SEC are posted as soon as reasonably practical after they are filed electronically with the SEC. Please note that information contained on our website is not incorporated by reference in, or considered to be a part of, this report.

We completed the sale of our real property in Sunnyvale, California on January 23, 2014, for a consideration of \$60.0 million. Pursuant to the sale, we will be relocating our offices and facilities to a new location. Beginning January 23, 2014, we have entered into a lease of the property and have the option to leaseback up to 24 months from that date.

Critical Accounting Estimates

Our discussion and analysis of our financial condition and results of operations are based upon our consolidated financial statements, which have been prepared in accordance with U.S. GAAP. The preparation of these financial statements requires us to make estimates and judgments that affect the reported amounts in our consolidated financial statements. We evaluate our estimates on an on-going basis, including those related to our net sales, inventories, asset impairments, stock-based compensation expense, legal reserve and income taxes. We base our estimates on experience and on various other assumptions that we believe to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities. The actual results may differ from these estimates or our estimates may be affected by different assumptions or conditions.

Business Acquisition

Accounting for acquisitions requires us to estimate the fair value of consideration paid and the individual assets and liabilities acquired, which involves a number of judgments, assumptions and estimates that could materially affect the amount and timing of costs recognized. Accounting for acquisitions can also involve significant judgment to determine when control of the acquired entity is transferred. We obtain independent third party valuation studies to assist in determining fair values, including assistance in determining future cash flows, appropriate discount rates and comparable market values. The items involving the most significant assumptions, estimates and judgments included determining the fair value of the following:

Intangible assets including estimated economic lives and straight-line amortization method;

Deferred tax liability, including projections of future taxable income and tax rates;

Inventory, including estimated future selling prices, timing of product sales and completion costs for work in process; and

Estimated liability of employees pension related obligations.

Property, plant and equipment.

Revenue Recognition

We recognize revenue from product sales to OEMs when the earnings process is complete, as evidenced by an agreement with the customer, transfer of title, fixed or determinable pricing and when collectability is reasonably assured. We record reserves for estimated customer returns based on historical experience.

We sell directly to distributors under terms that provide for rights of return, stock rotation and price protection guarantees. Since we are unable to reliably estimate the resale price to our end customer and returns under the stock rotation rights to our distributors, we defer the recognition of revenue and related product costs on these sales as deferred income until distributors submit Point of Sales reports to us. We also sell some of our products to certain distributors under sales arrangements that do not allow for rights of return or price protection on unsold products. We recognize revenue on these sales when the earnings process is complete, as evidenced by an agreement with the customer, transfer of title, fixed or determinable pricing and when collectability is reasonably assured.

Rights of return are granted whereby we are obligated to repurchase inventory from a distributor upon termination of the distributor's sales agreement with us. However, we are not required to repurchase the distributor's inventory under certain circumstances such as the failure to return the inventory in saleable condition, or, we may only be required to repurchase a portion of distributor's inventory, for example when the distributor has terminated the agreement for its convenience.

Stock rotation rights are provided to distributors when we have given written notice to the distributor that a product is being removed from our published price list. The distributor has a limited period of time to return the product. All returns are for credit only; the distributor must order a quantity of products, the dollar value of which equals or exceeds the dollar value of the products being returned. Some distributors are also offered quarterly stock rotation. Such stock rotation is limited to a certain percentage of the previous three months' net shipments.

A general price protection is granted to a distributor if we publicly announce a price reduction relating specifically to certain products, whereby the distributor is entitled to a credit equal to the difference between the price paid by the distributor and the newly announced price.

Price protection adjustments are provided to distributors solely for those products that: (i) are shipped to the distributor during the period preceding the price reduction announcement; (ii) are part of the distributor's inventory at the time of the announcement; and (iii) are located at geographic territories previously authorized by us.

In addition, if we judge that a distributor demonstrates that it needs a price lower than the current published price list in order to secure an order from the distributor's customers, we may, but we have no obligation to, grant the distributor a credit to offset the amount owed under our current published price. The distributor must submit the request for a reduction in price prior to the sale of products to its customer. If the request is approved and the sale occurs, the distributor must make a claim with the proof of resale to the end customers for a credit within a specified time period.

Gross deferred revenue and gross deferred cost of sales on shipments to distributors as of December 29, 2013 and December 30, 2012 are as follows:

	December 29, 2013	December 30, 2012
	(in thousands)	
Deferred revenue	\$65,649	\$ 23,533
Less: deferred costs of sales	(35,854)	(14,850)
Deferred income on shipments ⁽¹⁾	\$29,795	\$ 8,683

The deferred income of \$30.2 and \$9.1 million on the consolidated balance sheets as of December 29, 2013 and (1)December 30, 2012 each included \$0.5 million of deferred revenue related to our licensing revenue excluded in the table above to separately illustrate the deferred income on product shipments.

Our distributors provide us with periodic data regarding the product, price, quantity, and end customer for products that are resold as well as the quantities of our products that they still have in stock. We reconcile distributors' reported inventories to their activities.

We have licensed our patents to other companies and will continue to do so in the future. The terms and conditions of license agreements are highly negotiated and can vary significantly. Generally, however, when a license agreement

requires the payment of royalties to Spansion, we recognize fixed payment amounts on the date they become due. For other agreements, we recognize revenue based on notification of the related sales from the licensees.

Estimates of Sales Returns and Allowances

We occasionally accept sales returns or provide pricing adjustments to customers who do not have contractual return or pricing adjustment rights. We record a provision for estimated sales returns and allowances on product sales in the same period that the related revenues are recorded, which impacts gross margin. We base these estimates on historical sales returns, allowances, and price reductions, market activity and other known or anticipated trends and factors. These estimates are subject to management's judgment, and actual returns and adjustments could be different from our estimates and current provisions, resulting in an impact to our future revenues and operating results.

Inventory Valuation

At each balance sheet date, we evaluate our ending inventories for excess quantities and obsolescence. This evaluation includes analysis of sales levels by product and projections of future demand. These projections assist us in determining the carrying value of our inventory and are also used for near-term factory production planning. We write off inventory that we consider obsolete and adjust remaining specific inventory balances to approximate the lower of our manufacturing cost or market value. Among other factors, management considers forecasted demand in relation to the inventory on hand, competitiveness of product offerings, market conditions and product life cycles when determining obsolescence and net realizable value. If we anticipate future demand or market conditions to be less favorable than our previous projections, additional inventory write-downs may be required and would be reflected in cost of sales in the period the write-down is made. This would have a negative impact on our gross margin in that period. If in any period we are able to sell inventories that were not valued or that had been written down in a previous period, related revenues would be recorded without any offsetting charge to cost of sales, resulting in a net benefit to our gross margin in that period.

Stock-Based Compensation

Stock-based compensation is estimated at the grant date based on the fair value of the stock award and is recognized as expense using the straight-line amortization method over the requisite service period.

We estimate the grant date fair value of all options using the Black-Scholes option pricing model, which requires the use of inputs like expected volatility, expected term, expected dividend yield, and expected risk-free rate of return. Our expected volatility is based largely on the historical volatility of our traded stock and to a lesser extent on the volatilities of our competitors with similar characteristics, who are in the same industry sector (guideline companies) because of the lack of sufficient historical realized volatility data on our stock price. We used the simplified calculation of expected term as it does not have sufficient historical exercise data to provide a reasonable basis upon which to estimate the expected term of stock options since emergence from the Chapter 11 bankruptcy. If we determine that other methods to estimate expected volatility or expected life were more reasonable, or if other methods for calculating these input assumptions were prescribed by authoritative guidance, the fair value calculated for stock-based awards could change significantly.

For key executive restricted stock units, the expense recognized in interim periods is dependent on the probability of the annual performance measure being achieved. We utilize forecast of future performance to assess this probability and this assessment requires considerable judgment. The expense is trued up at year end when actual annual performance is known. The fair value of the performance-based restricted stock awards (PSUs) is estimated using a Monte Carlo simulation to simulate a range of our possible future stock prices and the other companies in our peer group. The simulation requires assumptions for expected volatilities and correlation coefficients of each entity, risk-free rate of return, and dividend yield. Expected volatilities are based our historical volatilities over a period equal to the length of the measurement period and the other companies in the peer group. Correlation coefficients are based on the same data used to calculate historical volatilities and are used to model how each entity's stock price moves in relation each of the other companies included in the peer group. Dividends are assumed to be reinvested in the issuing entity over the measurement period, equating to a zero percent dividend yield for us and the other companies in the peer group. The vesting of these PSUs is based on the total shareholder return (TSR) of the Company, relative to its peer group. The peer group is determined by our Compensation Committee on an annual basis and TSR is measured at the end of each of two 18-month performance periods.

In addition, we are required to develop an estimate of the number of share-based awards that will be forfeited due to employee turnover. The guidance on stock compensation requires forfeitures to be estimated at the time of grant and revised, if necessary, in subsequent periods if actual forfeitures differ from those estimates in order to derive our best estimate of awards ultimately expected to vest. We estimate forfeitures based on historical experience related to our own stock-based awards granted. We anticipate that these estimates will be revised, if necessary, in subsequent periods if actual forfeitures differ from those estimates.

Income Taxes

In determining taxable income for financial statement reporting purposes, we make estimates and judgments. These estimates and judgments are applied in the calculation of specific tax liabilities and in the determination of the recoverability of deferred tax assets, which arise from temporary differences between the recognition of assets and liabilities for tax and financial statement reporting purposes.

We assess the likelihood that we will be able to recover our deferred tax assets. Unless recovery of these deferred tax assets is considered more likely than not, we increase our provision for taxes by recording a charge to income tax expense, in the form of a valuation allowance against those deferred tax assets for which we do not believe it is more likely than not they will be realized. We consider past performance, future expected taxable income and prudent and feasible tax planning strategies in determining the need for a valuation allowance.

In addition, the calculation of our tax liabilities involves the application of complex tax rules and the potential for future adjustments by the relevant tax jurisdiction. If our estimates of these taxes are greater or less than actual results, an additional tax benefit or charge will result.

In determining the financial statement effects of an unrecognized tax position, we determine when it is more likely than not, based on the technical merits, that the position will be sustained upon examination. In this determination, we assume that the position will be examined by a taxing authority that has full knowledge of all relevant information, and will be resolved in the court of last resort. The more likely than not recognition threshold means that no amount of tax benefits may be recognized for a tax position without a greater than 50% likelihood that it will be sustained upon examination.

Goodwill

We review goodwill for impairment at least annually in the fourth quarter of each fiscal year or more frequently if events or changes in circumstances indicate that the asset might be impaired. We adopted November 30th as the date of the annual impairment test.

In September 2011, the Financial Accounting Standards Board (FASB) issued guidance that was intended to reduce the complexity and costs of testing for goodwill impairment by allowing an entity the option to make a qualitative evaluation about the likelihood of impairment to determine whether it should calculate the fair value of a reporting unit. The guidance provides an entity the option to first assess qualitative factors to determine whether it is necessary to perform the current two-step test for goodwill impairment. If an entity believes, as a result of its qualitative assessment, that it is more-likely-than-not that the fair value of a reporting unit is less than its carrying amount, the quantitative impairment test is required. Otherwise, no further testing is required. We adopted this guidance beginning fiscal 2012. We have a single reporting unit. Our fair value was substantially in excess of the carrying amount based on the quantitative assessment of goodwill that we performed in fiscal 2011. In fiscal 2012, we performed the qualitative assessment of goodwill and concluded that there was no impairment. In fiscal 2013, we performed a quantitative assessment of goodwill using the market valuation approach and concluded that there was no impairment to goodwill.

Impairment of Long-Lived Assets including Acquisition-Related Intangible Assets

We consider quarterly whether indicators of impairment relating to the long-lived assets are present. These indicators may include, but are not limited to, significant decreases in the market value of an asset, significant changes in the extent or manner in which an asset is used or an adverse change in our overall business climate. If these or other indicators are present, we test for recoverability of the intangible asset by determining whether the estimated undiscounted cash flows attributable to the asset in question is less than its carrying value. If less, we recognize an impairment loss based on the excess of the carrying amount of the asset over its fair value.

Estimates Relating to Litigation Reserve

Our litigation reserve policy is to record an estimate for litigation expenses required to defend ourselves over the course of a reasonable period of time. Currently, this is estimated at twelve months in accordance with the accounting guidance. Judgment is necessary to estimate these costs and an accrual is made when it is probable that a liability has been incurred and the amount of loss can be reasonably estimated.

New Accounting Pronouncements

In July 2013, the FASB issued an accounting standard update permitting the Fed Funds Effective Swap Rate to be used as a U.S. benchmark interest rate for hedge accounting purposes, in addition to US Treasury interest rates and the London Interbank Offered Rate (LIBOR). This guidance is effective prospectively for qualifying new or redesignated hedging relationships, entered into on or after July 17, 2013. The adoption of this guidance did not affect our consolidated financial position, results of operations, or cash flows.

In July 2013, the FASB issued an accounting standard update that resolves the diversity in practice regarding the financial statement presentation of an unrecognized tax benefit when a net operating loss carryforward, a similar tax loss, or a tax credit carry forward exists. The unrecognized tax benefit should be presented as a reduction to a deferred tax asset. This accounting standard update is effective for the first annual period beginning after December 15, 2013. We do not expect adoption of this guidance to affect our consolidated financial position, results of operations, or cash flows.

In February 2013, the FASB issued guidance to provide enhanced disclosures related to reclassifications out of accumulated other comprehensive income. An entity will be required to disclose the net income line items impacted by significant reclassifications out of accumulated other comprehensive income if the item is reclassified in its entirety. For other amounts that are not required to be reclassified in their entirety to net income in the same reporting period, an entity is required to cross-reference other disclosures required under U.S. GAAP that provide additional detail about those amounts. The new guidance is effective for fiscal years, and interim periods within those years, beginning after December 15, 2012. The adoption of this guidance beginning the first quarter of fiscal 2013 did not have an impact on our consolidated financial position, results of operations or cash flows.

In December 2011, the FASB issued an accounting standard update requiring enhanced disclosure related to certain financial instruments and derivative instruments that are offset in the balance sheet or subject to an enforceable master netting arrangement or similar arrangement. In January 2013, the FASB clarified the scope of this guidance as being applicable to derivatives, repurchase agreements and securities borrowing and lending transactions that are either offset or subject to an enforceable master netting arrangement or similar agreement. The disclosure requirement becomes effective beginning the first quarter of fiscal year ending December 28, 2014. The adoption of this guidance is not expected to have an impact on our consolidated financial position, results of operations or cash flows.

Results of Operations

The following is a summary and analysis of our net sales, gross margin, operating income (loss), interest and other income (expense), net, interest expense and income tax provision for fiscal 2013, fiscal 2012 and fiscal 2011.

	Year Ended					
	December		December		December	
	29,		30,		25,	
	2013		2012		2011	
	(in thousands, except for percentages)					
Total net sales	\$971,690		\$915,932		\$1,069,883	
Cost of sales	\$719,062		\$632,417		\$847,797	
Gross profit	\$252,628		\$283,515		\$222,086	
Gross margin	26	%	31	%	21	%
Research and development	\$126,768		\$107,850		\$106,644	
Sales, general and administrative	\$178,265		\$135,607		\$108,461	
Net gain on sale of KL land and building	\$-		\$(28,434)		\$-	
Restructuring charges (credits)	\$6,017		\$5,650		\$12,295	
Operating income (loss)	\$(58,422)		\$62,842		\$(5,314)	
Interest and other income (expense), net	\$4,406		\$4,688		\$3,954	
Interest expense	\$(29,792)		\$(30,147)		\$(33,151)	
Gain on acquisition of Microcontroller and Analog business	\$7,950		\$-		\$-	
Provision for income taxes	\$(2,410)		\$(12,999)		\$(21,037)	

Net Sales

Total net sales increased by \$55.8 million from \$915.9 million in fiscal 2012 to \$971.7 million in fiscal 2013. The increase was primarily due to revenues of \$222.8 million during the third and fourth quarters of fiscal 2013 from our newly acquired MCA business. The increase was partially offset by a \$159.6 million decline in flash embedded sales mainly due to lower gaming revenues in Japan as the majority of our gaming customers were in product transition, moving to newer product platforms during fiscal 2013. In addition, we also had downward pressure on selling prices due to continued imbalance in supply and demand in the flash market.

Total net sales decreased by \$154.0 million from \$1,069.9 million in fiscal 2011 to \$915.9 million in fiscal 2012. The decrease was primarily due to \$152.5 million reduction in wireless sales and to a lesser extent, reduction in sales in the Asia Pacific region. The global semiconductor market declined in 2012 due to the slow economic growth in developed markets and cautious consumer and enterprise spending.

Gross Profit

Our gross profit decreased by \$30.9 million from \$283.5 million in fiscal 2012 to \$252.6 million in fiscal 2013. The gross margin decreased from 31% in fiscal 2012 to 26% in fiscal 2013. The decrease in gross margin was mainly due to lower margins on revenues in the flash embedded markets, primarily driven by lower gaming revenues in Japan and a downward pressure on selling prices due to continued imbalance in supply and demand. This was partially offset by the addition of gross profit from the MCA business revenues, net of \$30.2 million amortization of a purchase accounting markup on the inventory purchased from FSL as a part of the acquisition, and efficiencies from factory operations.

Our gross profit increased by \$61.4 million from \$222.1 million in fiscal 2011 to \$283.5 million in fiscal 2012. The increase was mainly due to improved internal fabrication facility utilization and efficiencies from the consolidation of our two assembly and test operations in Asia following the closure of our Kuala Lumpur, Malaysia facility in the second quarter of fiscal 2012. In addition, fiscal 2011 gross margins were adversely impacted by the residual effect of fresh-start-related inventory write-up amortization, \$28.0 million relating to the write down of wireless inventory and \$15.8 million impairment of wireless related assets. We did not have similar charges in fiscal 2012.

Research and development

Our research and development, or R&D, expenses increased by \$18.9 million from \$107.9 million in fiscal 2012 to \$126.8 million in fiscal 2013. The increase was mainly due to \$34.6 million of additional R&D expense relating to the MCA business incurred during the third and fourth quarters of fiscal 2013. The increase was partially offset by \$9.7 million of lower employee compensation and benefits due to the reduction in headcount as part of the restructuring activity in fiscal 2013, \$3.5 million lower development charges primarily relating to NAND development and \$2.3 million lower material costs on probe cards and other materials used in R&D projects in fiscal 2013.

Our R&D expenses increased by \$1.3 million from \$106.6 million in fiscal 2011 to \$107.9 million in fiscal 2012. The increase was mainly due to \$10.4 million of higher employee compensation and benefits and \$1.7 million higher development charges primarily relating to NAND development. The increase was partially offset by the non-recurrence in fiscal 2012 of certain R&D charges incurred in fiscal 2011 including \$7.2 million of asset impairment charges relating to R&D tools and equipment held for sale after the closure of our Sub-Micron Development Center (SDC) located in Sunnyvale, California and \$1.7 million of technical support charges. In addition, our material costs for R&D projects were \$1.3 million lower in 2012 and depreciation was \$1.0 million lower due to the diminishing impact of fresh start accounting-related adjustments in fiscal 2012.

Sales, general and administrative

Our sales, general and administrative, or SG&A, expenses increased by \$42.7 million from \$135.6 million in fiscal 2012 to \$178.3 million in fiscal 2013. The increase was mainly due to \$23.9 million of higher legal expenses relating to the Macronix patent infringement litigation, \$23.1 million of additional SG&A expenses relating to the MCA business incurred during the third and fourth quarters of fiscal 2013, and \$12.7 million MCA business integration costs. The increase was partially offset by \$10.6 million of lower employee compensation and benefits due to the reduction in headcount in fiscal 2013, \$5.0 million of lower travel, marketing activities and other outside services in fiscal 2013 and \$1.7 million of lower employee stock-based compensation expense in fiscal 2013.

Our SG&A expenses increased by \$27.1 million from \$108.5 million in fiscal 2011 to \$135.6 million in fiscal 2012. In fiscal 2011, SG&A expenses were reduced by a \$23.4 million net reduction in litigation reserves primarily as a result of settlement of the Samsung patent litigation. There was no comparable reduction in fiscal 2012. In addition, employee compensation and benefits expenses in fiscal 2012 were higher by \$7.8 million due to annual salary adjustments, higher incentive compensation and increased stock based compensation. The increase was partially offset by \$4.5 million due to lower depreciation and building allocation charges from the diminishing impact of fresh start accounting-related adjustments.

Net Gain on Sale of Land and Building in Kuala Lumpur

We recognized a gain of \$28.4 million, net of selling expenses, on the sale of our assembly, pack, mark and test facility in Kuala Lumpur, Malaysia facility (the KL facility), in the second quarter of fiscal 2012. There was not a similar transaction in fiscal 2013 and fiscal 2011.

Restructuring Charges

Beginning with the third quarter of fiscal 2013, in an effort to reduce our expense levels, given the competitive pricing pressures and slower than expected growth in Japan revenues, we implemented a reduction in force to rationalize our global workforce.

Restructuring charges increased by \$0.3 million from \$5.7 million in fiscal 2012 to \$6.0 million in fiscal 2013. Restructuring charges in fiscal 2013 were mainly comprised of \$5.8 million of severance expense and \$0.4 million of intangible assets written off due to closure of a design service facility. Restructuring charges for fiscal 2012 were comprised of \$7.9 million asset relocation and impairment charges relating to closure of the KL Facility and \$1.9 million of severance and employee related costs, offset by a \$1.9 million gain on the sale of equipment in the KL facility, a \$1.9 million gain on sales of equipment in Thailand, and a \$0.9 million credit as a result of our prevailing in a labor-related lawsuit.

Restructuring charges decreased by \$6.6 million from \$12.3 million in fiscal 2011 to \$5.7 million in fiscal 2012. Restructuring charges in fiscal 2012 were mainly comprised of \$7.9 million of asset relocation and impairment charges relating to the closure of the KL facility and \$1.9 million of severance and employee related costs, offset by a \$1.9 million gain on the sale of equipment in the KL facility, a \$1.9 million gain on sale of equipment in Thailand.

Restructuring charges recorded in fiscal 2011 were mainly comprised of \$11.7 million of severance pay and benefits relating to the 2011 Restructuring Plan.

Gain on acquisition

Gain on the MCA business acquisition of \$7.9 million was recognized in fiscal 2013. We did not have a similar event in the fiscal year ended December 30, 2012.

Interest and Other Income (Expense), net

Interest and other income (expense) decreased by \$0.3 million from \$4.7 million in fiscal 2012 to \$4.4 million in fiscal 2013. The decrease was due to \$6.2 million of costs relating to partial repurchase of 7.875% Senior Notes, benefit of \$5.0 million in fiscal 2012 relating to release of the claims reserve as a result of the settlement of a bankruptcy claim and preferential claims receipts compared to none in fiscal 2013, and \$0.9 million higher realized and unrealized loss on foreign currency transactions in fiscal 2013. The decrease was offset by \$10.0 million of gain on recovery of a previously impaired investment and \$2.4 million of gain on ineffective cash flow hedges in fiscal 2013.

Interest and other income (expense) increased by \$0.7 million from \$4.0 million in fiscal 2011 to \$4.7 million in fiscal 2012. The increase was mainly due to the release of the claims reserve of \$4.0 million as a result of the settlement of a bankruptcy claim in the fourth quarter of fiscal 2012 and \$1.1 million of gain from liquidation of previously impaired auction rate securities. The above increase was offset by \$1.4 million of higher preferential claim receipts during fiscal 2011 as compared to fiscal 2012, \$1.1 million of higher fees incurred on the amendment of the Term Loan in the fourth quarter of fiscal 2012 as compared to the amendment done in the second quarter of fiscal 2011, and a \$0.9 million increase in realized and unrealized loss on foreign currency transactions in fiscal 2012.

Interest Expense

Our interest expense decreased by \$0.3 million from \$30.1 million in fiscal 2012 to \$29.8 million in fiscal 2013 due to various refinancing activities targeted at lowering the cost of our debt.

Our interest expense decreased by \$3.1 million from \$33.2 million in fiscal 2011 to \$30.1 million in fiscal 2012. The decrease was due to \$1.8 million lower interest expense on the Senior Secured Term Loan facility (the Term Loan) as a result of continued principal repayments, both scheduled payments and prepayments amounting to \$30.4 million made in fiscal 2012 and a \$1.2 million reduction in loss on interest rate swaps relating to the Term Loan.

The average interest rate on our debt portfolio for fiscal 2013 and 2012 was 5.84% and 6.21% respectively. The average interest rate on our debt portfolio was 6.51% in fiscal 2011.

Provision for Income Taxes

We recorded income tax expense of \$2.4 million in fiscal 2013 and \$13.0 million in fiscal 2012. We recorded income tax expense of \$21.0 million in fiscal 2011.

Income tax expense recorded for fiscal 2013 differs from the income tax expense that would be derived by applying a U.S. statutory tax rate of 35% to the income before income taxes due to our inability to benefit from U.S. operating losses, and income that was earned and tax effected in foreign jurisdictions with different tax rates. The income tax expense includes foreign taxes as well as \$4.1 million related to withholding tax on Samsung licensing revenue. These were offset by the release of reserves for uncertain tax positions of \$4.6 in foreign locations and the impact from the acquisition of the MCA business of \$3.7 million.

Income tax expense recorded for fiscal 2012 differs from the income tax expense that would be derived by applying a U.S. statutory tax rate of 35% to the income before income taxes due to our inability to benefit from U.S. operating losses, and income that was earned and tax effected in foreign jurisdictions with different tax rates. The income tax expense includes foreign taxes as well as \$4.1 million related to withholding tax on Samsung licensing revenue.

Income tax expense recorded for fiscal 2011 differs from the benefit for income taxes that would be derived by applying a U.S. statutory tax rate of 35% to the loss before income taxes primarily due to our inability to benefit from U.S. operating losses due to a lack of a history of earnings, and income that was earned and tax effected in foreign jurisdiction with different tax rates. The income tax expense includes \$15.4 million for foreign taxes as well as a \$2.8 million correction for uncertain tax positions of our foreign locations for the Successor period in fiscal 2011 and \$5.2 million related to withholding tax on Samsung licensing revenue.

As of December 29, 2013, we recorded a valuation allowance of approximately \$355.5 million against our U.S. deferred tax assets, net of deferred tax liabilities. This valuation allowance offsets all of our net U.S. deferred tax assets. As of December 29, 2013, we also recorded valuation allowances of approximately \$2.4 million against various foreign deferred tax assets for which we do not believe it is more likely than not that they will be realized.

Contractual Obligations

The following table summarizes our contractual obligations at December 29, 2013. The table is supplemented by the discussion following the table.

	Total	2014	2015	2016	2017	2018	2019 and Beyond
	(in thousands)						
Senior Secured Term Loan	\$300,000	\$3,858	\$3,000	\$3,000	\$3,750	\$3,000	\$283,392
Senior Notes ⁽¹⁾	94,064	94,064					
Exchangeable Senior Notes	150,000						150,000
Interest on Debt	88,696	13,210	14,249	14,166	16,721	13,938	16,412
Other long term liabilities ⁽²⁾	9,855	-	6,918	2,893	44	-	-
Operating leases	16,470	8,428	3,885	2,960	1,197	-	-
Unconditional purchase commitments ⁽³⁾	106,059	53,110	25,382	27,567	-	-	-
Total contractual obligations ⁽⁴⁾	\$765,144	\$172,670	\$53,434	\$50,586	\$21,712	\$16,938	\$449,804

(1) The remaining balance of the outstanding 7.875% Senior Notes was redeemed on January 21, 2014.

(2) The other long term liabilities mainly comprise payment commitments for long term software license agreements with vendors, and asset retirement obligations.

Unconditional purchase commitments (UPCs) include agreements to purchase goods or services that are enforceable and legally binding on us and that specify all significant terms, including fixed or minimum quantities (3) to be purchased; fixed, minimum or variable price provisions; and the approximate timing of the transaction. A majority of these commitments relate to inventory purchases. UPCs exclude agreements that are cancelable without a penalty.

(4)

As of December 29, 2013, the liability for uncertain tax positions was \$16.1 million including interest and penalties. Due to the high degree of uncertainty regarding the timing of potential future cash flows associated with these liabilities, we are unable to make a reasonably reliable estimate of the amount and period in which these liabilities might be paid.

Senior Secured Term Loan (Term Loan)

On February 9, 2010, Spansion LLC, our wholly owned operating subsidiary, borrowed \$450 million under a Senior Secured Term Loan facility pursuant to which we incurred financing points, fees to the arrangers and legal costs of approximately \$11.1 million, which were charged to interest expense in the Predecessor. In addition, we paid the lenders approximately \$10 million of financing fees upon the release of Term Loan funds from escrow. During the fourth quarter of fiscal 2010, we issued \$200.0 million of our 7.875% Senior Notes due 2017 and concurrently repaid \$196.0 million of our Senior Secured Term Loan.

On May 12, 2011, Spansion LLC amended the Term Loan to reduce the margin on base rate loans from 3.75% per annum to 2.50% per annum, to reduce the margin on Eurodollar rate loans from 4.75% per annum to 3.50% per annum, and to reduce the LIBOR floor on Eurodollar rate loans from 1.75% to 1.25%, effective as of May 16, 2011. We incurred a \$2.5 million re-pricing penalty associated with the amendment of the Term Loan, which was treated as a debt discount and amortized using the interest method over the term of the debt.

On December 13, 2012, Spansion LLC amended the Term Loan, giving the Company the ability to add incremental term loans in an aggregate amount for all such increases not to exceed (a) \$100 million less the aggregate amount of incremental facilities under the Revolving Credit Facility and (b) an additional amount if, after giving effect to the incurrence of such additional amount, Spansion LLC is in compliance with a senior secured leverage ratio of 2.75:1.00. On the closing date of the December 2012 amendment to the Term Loan (the Term Loan Facility), Spansion LLC paid the lenders an upfront fee of approximately \$1.1 million, which was treated as a debt discount and amortized using the interest method over the term of the debt.

On December 19, 2013, Spansion LLC again amended the Term Loan to reduce the interest rate on the approximately \$214 million principal amount outstanding from LIBOR plus 4.00% (with a LIBOR floor of 1.25%) to LIBOR plus 3.00% (with a LIBOR floor of 0.75%). In conjunction with the amendment, Spansion LLC borrowed an additional amount of approximately \$82.0 million under the Term Loan, net of issuance costs. The amendment also provided for modifications to certain covenants and other provisions of the Term Loan Facility, including an extension of the maturity date to December 19, 2019 from December 13, 2018 and an increase of the general investment and restricted payments basket from \$50 million to \$75 million. The other covenants and provisions of the Term Loan Facility remain unchanged. The amendment was accounted for as a modification of debt under the accounting guidelines. We incurred \$2.1 million in fees and costs in connection with the amendment, of which \$1.8 million was treated as a debt discount to be amortized using the interest method over the term of the debt.

The Term Loan Facility is collateralized by a first priority security interest in, among other items, (i) all equity interests of Spansion Technology LLC, Spansion LLC and each of its direct and indirect domestic subsidiaries, and certain intercompany debt, (ii) all present and future tangible and intangible assets of Spansion LLC and its direct and indirect domestic subsidiaries, and (iii) all proceeds and products of the property and assets described in (i) and (ii). The collateral described in the foregoing sentence also secures the 2012 Revolving Credit Facility described below and certain hedging arrangements on an equal priority basis.

Spansion LLC may elect that the loans under the Term Loan Facility bear interest at a rate per annum equal to (i) 2.00% per annum plus the highest of (a) the prime lending rate, and (b) the Federal Funds rate plus 0.50%; or (ii) 3.00% per annum plus a 1-month, 3-month, or 6-month LIBOR rate (or 9-month and 12-month LIBOR rate with the consent of all the lenders), subject to a 0.75% floor. The default rate is 2.00% above the rate otherwise applicable.

The Term Loan Facility may be optionally prepaid at any time without premium, provided that, prior to the first six months from December 19, 2013, the closing date of the most recent amendment on the Term Loan Facility, a prepayment premium of 1% will be applied to any prepayment or refinancing of any portion of the Term Loan Facility in connection with Spansion LLC's incurrence of debt with a lower interest rate or any amendment to the Term Loan Facility that has the effect of reducing the effective yield. The Term Loan Facility is subject to mandatory prepayments in an amount equal to: (a) 100% of the net cash proceeds from the sale or other disposition of all or any part of our assets or extraordinary receipts or those of any of our subsidiaries, in excess of \$10 million per fiscal year, respectively, subject to certain reinvestment rights, (b) all casualty and condemnation proceeds received by us or any of our subsidiaries in excess of \$10 million individually or in an aggregate amount, subject to certain reinvestment rights, (c) 50% of the net cash proceeds received by us or any of our subsidiaries from the issuance of debt after the closing date of the Term Loan Facility (other than certain permitted indebtedness) and (d) 50% of our and our subsidiaries' excess cash flow, or 25%, if Spansion LLC has a leverage ratio of 2.5 to 1.0 or less, respectively. Voluntary prepayments will be applied to the remaining scheduled principal repayment installments of the Term Loan Facility on a pro-rata basis while mandatory prepayments will be applied to remaining scheduled amortization as directed by Spansion LLC.

Under the Term Loan Facility, we are subject to a number of covenants, including limitations on (i) liens and further negative pledges, (ii) indebtedness, (iii) loans and other investments, (iv) mergers, consolidations and acquisitions, (v) sales, transfers and other dispositions of assets, (vi) and dividends and other distributions subject to a \$75 million general restricted payment basket and an additional builder basket resulting from excess cash flow and certain proceeds.

As of December 29, 2013, we were in compliance with all of the Term Loan Facility's covenants.

2010 Revolving Credit Facility

On May 10, 2010, we entered into a revolving credit facility agreement (the 2010 Revolving Credit Facility) with Bank of America and other financial institutions, which provided up to \$65 million to supplement our working capital. On August 15, 2011, the 2010 Revolving Credit Facility was amended to include, among other changes, a reduction of the commitment to \$40 million. On December 13, 2012, we voluntarily terminated the 2010 Revolving Credit Facility and all outstanding fees and expenses due were paid off at termination.

2012 Revolving Credit Facility

On December 13, 2012, we entered into the Revolving Credit Agreement (the 2012 Revolving Credit Facility) with Morgan Stanley Bank, N.A. and other financial institutions.

The 2012 Revolving Credit Facility consists of an aggregate principal amount of \$50 million, with up to \$25 million available for issuance of letters of credit and up to \$15 million available as a swing line sub-facility. The size of the commitments under the 2012 Revolving Credit Facility may be increased in an aggregate amount for all such increases not to exceed (a) \$230 million less the aggregate amount of incremental facilities under the Term Loan Facility plus (b) an additional \$50 million if, after giving effect to the incurrence of such additional amount, Spansion LLC is in compliance with a senior secured leverage ratio of 2.75:1.00. The 2012 Revolving Credit Facility has a five year maturity (December 13, 2017).

There is no amortization of loans drawn under the 2012 Revolving Credit Facility. Drawings in respect of any letter of credit will be reimbursed by Spansion LLC on the same business day. To the extent such drawings are not reimbursed on the same business day, the drawing converts to a revolving loan.

Spansion LLC may elect that the loans under the 2012 Revolving Credit Facility bear interest at a rate per annum, equal to (i) a rate per annum as set forth under “Revolver Base Rate Loans” in the grid below plus the highest of (a) the prime lending rate, (b) the Federal Funds rate plus 0.50%, and (c) the LIBOR rate for an interest period of one-month plus 1.00%; or (ii) a rate per annum as set forth under “Revolver LIBOR Loans” in the grid below plus a 1-month, 3-month, or 6-month LIBOR rate (or 9-month and 12-month LIBOR rate with the consent of all the lenders). The default rate is 2.00% above the rate otherwise applicable.

<u>Leverage Ratio</u>	<u>Revolver LIBOR Loans</u>	<u>Revolver Base Rate Loans</u>
> 2.00:1.00	2.50%	1.50%
≤ 2.00:1.00	2.25%	1.25%

On the closing date of the 2012 Revolving Credit Facility, Spansion LLC paid each lender an upfront fee in an amount equal to 0.375% of the commitment amount of such lender. Spansion LLC is also liable for a per annum unused commitment fee according to the leverage ratio below payable (i) quarterly in arrears and (ii) on the date of termination or expiration of the commitments.

<u>Leverage Ratio</u>	<u>Unused Commitment Fees</u>
> 2.00:1.00	0.50%
≤ 2.00:1.00	0.375%

The 2012 Revolving Credit Facility is secured by a first priority security interest in, among other items, (i) all equity interests of Spansion Technology, Spansion LLC and each of its direct and indirect domestic subsidiaries, and certain intercompany debt, (ii) all present and future tangible and intangible assets of Spansion LLC and its direct and indirect domestic subsidiaries, and (iii) all proceeds and products of the property and assets described in (i) and (ii). The collateral described in the foregoing sentence also secures the Term Loan Facility and certain hedging arrangements on an equal priority basis.

The 2012 Revolving Credit Facility may be optionally prepaid and unutilized commitments reduced at any time without premium or penalty. The 2012 Revolving Credit Facility is subject to mandatory prepayments, after payment in full of the outstanding loans under the Term Loan Facility, in an amount equal to 100% of the net cash proceeds from the sale or other disposition (including by way of casualty or condemnation) of all or any part of the assets and extraordinary receipts of Spansion Inc. or any of its subsidiaries in excess of \$10 million per fiscal year after the closing date of the Revolving Credit Facility (with certain exceptions and reinvestment rights).

We are subject to (i) a minimum fixed coverage ratio of 1.25:1 and (ii) a maximum leverage ratio of 3.5:1, only if loans are drawn under the Revolving Credit Facility, or letters of credit in excess of \$5 million in aggregate are outstanding under the 2012 Revolving Credit Facility.

Under the terms of the 2012 Revolving Credit Facility, we are subject to a number of covenants, including limitations on (i) liens and further negative pledges, (ii) indebtedness, (iii) loans and other investments, (iv) mergers, consolidations and acquisitions, (v) sales, transfers and other dispositions of assets, (vi) and dividends and other distributions subject to a \$50 million general restricted payment basket and an additional builder basket resulting from excess cash flow and certain proceeds.

On September 27, 2013, we amended our revolving credit facility to increase the revolving loan commitment from \$50 million to \$70 million. The amendment to the Revolving Credit Facility contains additional covenants requiring: (a) the consolidated quick ratio as determined on the last day of any fiscal quarter to not be less than 1.25 to 1.0, and (b) the amount of consolidated cash, cash equivalent and other short-term marketable investments to not be less than \$150 million.

As of December 29, 2013, we were in compliance with all of the 2012 Revolving Credit Facility's covenants. Drawdown under the 2012 Revolving Credit Facility requires that we meet or obtain a waiver to certain conditions precedent including the senior secured leverage ratio not to exceed 2.75:1.00 and compliance with the coverage and leverage ratios described above, as of the last day of the fiscal quarter most recently ended. Based on the financial results for the quarter ended December 29, 2013, we do not comply with the leverage ratio and we have not obtained a waiver for those conditions. As of December 30, 2012, availability on the 2012 Revolving Credit Facility was \$50 million with no outstanding balance.

2.00% Senior Exchangeable Notes

On August 26, 2013, Spansion LLC, our wholly-owned subsidiary, issued \$150.0 million of Senior Exchangeable Notes due 2020 (the Notes) in a private placement. The Notes are governed by an Indenture, dated August 26, 2013, between us and Wells Fargo Bank, National Association, as Trustee. They are fully and unconditionally guaranteed on a senior unsecured basis by us and Spansion Technology LLC. The Notes will mature on September 1, 2020, unless earlier repurchased or converted, and bear interest of 2.00% per year payable semi-annually in arrears on March 1 and September 1, commencing on March 1, 2014. The Notes may be due and payable immediately in certain events of default. Pursuant to the indenture, there are covenants that limit the amount of dividends that could be declared or made. The most restrictive covenant limits dividends to approximately \$100.0 million.

The Notes are exchangeable for an initial exchange rate of 72.0929 shares of common stock per \$1,000 principal amount of the Notes (equivalent to an initial exchange price of approximately \$13.87 per share) subject to adjustments for anti-dilutive issuances and make-whole adjustments upon a fundamental change. A fundamental change includes a change in control, delisting of the Company's stock and liquidation, consolidation or merger of the Company. Prior to June 1, 2020, the Notes will be exchangeable under certain specified circumstances as described in the Indenture.

The Notes were issued at face value, resulting in net proceeds of approximately \$145.5 million after related offering expenses. In accounting for the Notes at issuance, we separated the Notes into debt and equity components according to the accounting standards for convertible debt instruments that may be fully or partially settled in cash upon conversion. The carrying amount of the debt component, which approximates its fair value, was estimated by using an interest rate for nonconvertible debt, with terms similar to the Notes. The excess of the principal amount of the Notes over the fair value of the debt component was recorded as a debt discount and a corresponding increase in additional paid-in capital. The debt discount is accreted to the carrying value of the Notes over their term as interest expense using the interest method. The amount recorded to additional paid-in capital is not to be remeasured as long as it continues to meet the conditions for equity classification. Upon issuance of the Notes, the Company recorded \$110.2 million as debt and \$39.8 million as additional paid-in capital in stockholders' equity.

We incurred transaction costs of approximately \$4.5 million relating to the issuance of the Notes. In accounting for these costs, we allocated the costs of the offering between debt and equity in proportion to the fair value of the debt

and equity recognized in accordance with the applicable accounting guidance. The transaction costs allocated to the debt component of approximately \$3.3 million were recorded as deferred offering costs in other non-current assets and amortized as interest expense over the term of the Notes. The transaction costs allocated to the equity component of approximately \$1.2 million were recorded as a decrease of additional paid-in capital.

The net carrying amount of the liability component of the Notes consists of the following:

	December 29, 2013
	(in thousands)
Principal amount	\$ 150,000
Unamortized debt discount	\$ 38,267
Net carrying value	\$ 111,733

The following table presents the interest expense recognized on the Notes:

	Year Ended December 29, 2013
	(in thousands)
Contractual interest expense at 2% per annum	\$ 1,044
Amortization of debt issuance costs	130
Accretion of debt discount	1,557
Total	\$ 2,731

Capped Calls

In connection with the issuance of the Notes, we entered into capped call transactions with certain bank counterparties to reduce the potential dilution to our common stock upon exchange of the Notes. The capped call transactions have a strike price of approximately \$13.87 and a cap price of approximately \$18.14, and are exercisable when and if the Notes are converted. If upon conversion of the Notes, the price of our common stock is above the strike price of the capped calls, the counterparties will deliver shares of our common stock and/or cash with an aggregate value approximately equal to the difference between the price of our common stock at the conversion date (as defined, with a maximum price for purposes of this calculation equal to the cap price) and the strike price, multiplied by the number of shares of our common stock related to the capped call transactions being exercised. The capped call transactions expire on September 1, 2020. We paid \$15.4 million for these capped calls and recorded the payment as a decrease of additional paid-in capital.

7.875% Senior Notes due 2017

On November 9, 2010, Spansion LLC completed an offering of \$200 million aggregate principal amount of 7.875% Senior Notes due 2017. The Senior Notes were issued at face value, resulting in net proceeds of approximately \$195.6 million after related expenses. The Senior Notes were general unsecured senior obligations of Spansion LLC and were fully and unconditionally guaranteed by Spansion Inc. and Spansion Technology LLC on a senior unsecured basis. Interest was payable on May 15 and November 15 of each year beginning May 15, 2011. As of December 29, 2013, we were in compliance of the covenants under the Senior Notes indenture.

On August 26, 2013, we used proceeds from the issuance and sale of the Notes to repurchase \$105.9 million of the Senior Notes. On January 21, 2014, we redeemed the remaining approximately \$94.0 million aggregate principal amount outstanding of Senior Notes at a redemption price that was 103.938% , which, with accrued and unpaid interest, and repurchase premium, was an aggregate price of \$99.1 million.

Covenants in the Senior Notes indenture included limitations on the amount of dividends up to approximately \$81.8 million that can be declared or made.

Liquidity and Capital Resources

Cash Requirements

As of December 29, 2013 and December 30, 2012, we had the following cash and cash equivalents and short term investments:

	December 29, 2013	December 30, 2012
	(in thousands)	
Cash	\$282,163	\$258,126
Money market funds	3,906	1,181
FDIC insured certificates of deposit	11,383	39,610
Time deposits	14,045	-
Commercial paper	-	14,980
Total cash and cash equivalents and short-term investments	\$311,497	\$313,897

On December 19, 2013, we amended the Term Loan to borrow an additional amount of \$82.0 million under the facility which along with our existing cash was used to redeem the remaining approximately \$94.0 million of the outstanding 7.875% Senior Notes due 2017 in the first quarter of fiscal 2014. Other future uses of cash are expected to be primarily for working capital, debt service, capital expenditures, contractual obligations, acquisitions and strategic investments. We believe our anticipated cash flows from operations, and our current cash balances will be sufficient to fund working capital requirements, debt service, and operations and to meet our cash needs for at least the next twelve months.

Financial Condition (Sources and Uses of Cash)

Our cash flows for fiscal 2013, fiscal 2012 and fiscal 2011 are summarized as follows:

Year Ended

	December 29,	December 30,	December 25,
	2013	2012	2011
	(in thousands)		
Net cash provided by operating activities	\$91,403	\$ 109,400	\$ 38,335
Net cash provided by (used in) investing activities	(164,891)	20,541	(100,371)
Net cash provided by (used in) financing activities	98,080	(60,946)	(74,188)
Effect of exchange rate changes on cash	(700)	(1,668)	1,780
Net increase (decrease) in cash and cash equivalents	\$23,892	\$ 67,327	\$(134,444)

Net Cash Provided by Operating Activities

Net cash provided by operations was \$91.4 million in fiscal 2013, and was primarily due to net loss of \$78.3 million, adjustments for non-cash items of \$96.9 million and an increase in operating assets and liabilities of \$72.7 million. Adjustments for non-cash items primarily consisted of \$91.2 million of depreciation and amortization and \$30.7 million of stock compensation costs, which were partially offset by an \$11.2 million gain on recovery from impaired investments, a \$7.9 million gain on the acquisition of the MCA business and \$5.0 million of benefit for deferred income tax. The net increase in operating assets and liabilities was primarily due to an increase of \$106.7 million in accounts payable, accrued liabilities, accrued compensation and benefits and other liabilities and a decrease of \$30.5 million in inventory, which was partially offset by an increase of \$69.0 million in accounts receivable.

Net cash provided by operations was \$109.4 million in fiscal 2012, and was primarily due to net income of \$24.4 million, adjustments for non-cash items of \$102.2 million and a decrease in operating assets and liabilities of \$17.2 million. Adjustments for non-cash items primarily consisted of \$95.4 million of depreciation and amortization, \$34.4 million of stock compensation costs, \$5.9 million of provision for deferred income tax and \$2.1 million of asset impairment charges, which were partially offset by a \$28.4 million gain on sale of the Kuala Lumpur land and buildings and a \$6.1 million gain from the sale of property, plant and equipment. The net decrease in operating assets and liabilities was primarily due to the decrease of \$15.4 million in accounts payable, accrued liabilities, accrued compensation and benefits and other liabilities.

Net cash provided by operations was \$38.3 million in fiscal 2011, and was primarily due to net loss of \$55.5 million, adjustments for non-cash items of \$200.2 million and a decrease in operating assets and liabilities of \$106.4 million. Adjustments for non-cash items primarily consisted of \$149.7 million of depreciation and amortization, \$19.2 million of stock compensation costs, \$8.3 million of amortization of inventory markup relating to fresh start accounting, and \$19.5 million of asset impairment charges. The net decrease in operating assets and liabilities was primarily due to the decrease of \$135.7 million in accounts payable, accrued liabilities, accrued compensation and benefits and other liabilities.

Net Cash Provided by (Used in) Investing Activities

Net cash used in investing activities was \$164.9 million during fiscal 2013, primarily due to \$150.0 million used for the acquisition of the MCA business, \$120.5 million used to purchase marketable securities and \$56.0 million of capital expenditures used to purchase property, plant and equipment, which were partially offset by \$146.8 million in proceeds from maturities of marketable securities.

Net cash provided by investing activities was \$20.5 million during fiscal 2012, primarily due to \$45.6 million from the sale of property, plant and equipment, \$112.5 million in proceeds from the redemption of marketable securities and \$1.1 million from the sale of auction rate securities, which were offset by \$42.3 million of capital expenditures used to purchase property, plant and equipment and \$96.3 million used to purchase marketable securities.

Net cash used in investing activities was \$100.4 million during fiscal 2011, primarily due to \$66.5 million of capital expenditures used to purchase property, plant and equipment and \$88.8 million used to purchase marketable securities, which were offset by \$8.4 million from the sale of property, plant and equipment and \$45.9 million in proceeds from the redemption of marketable securities.

Net Cash Provided by (Used in) Financing Activities

Net cash provided by financing activities was \$98.1 million during fiscal 2013, primarily due to \$150.0 million proceeds from issuance of the Notes and \$82.1 million proceeds from additional borrowing on Term Loan, which were partially offset by \$106.8 million used for partial purchase of the 7.875% Senior Notes and \$15.4 million used for purchase of capped call for the Exchangeable Senior Notes.

Net cash used in financing activities was \$60.9 million during fiscal 2012, primarily due to \$24.5 million for the purchase of bankruptcy claims, \$30.4 million of payments on debt and capital lease obligations, \$4.0 million for acquisition of a non-controlling interest and \$2.6 million refinancing cost on the Term loan and 2012 Revolving Credit Facility, offset by \$1.6 million of proceeds from the issuance of common stock upon the exercise of stock options.

Net cash used in financing activities was \$74.2 million during fiscal 2011, primarily due to \$71.0 million for the purchase of bankruptcy claims and \$7.5 million of payments on debt and capital lease obligations, offset by \$5.4 million of proceeds from the issuance of common stock upon the exercise of stock options.

Off-Balance-Sheet Arrangements

During the normal course of business, we make certain indemnities and commitments under which we may be required to make payments in relation to certain transactions. These indemnities include non-infringement of patents and intellectual property, indemnities to our customers in connection with the delivery, design, manufacture and sale of our products, indemnities to our directors and officers in connection with legal proceedings, indemnities to various lessors in connection with facility leases for certain claims arising from such facility or lease, and indemnities to other parties to certain acquisition agreements. The duration of these indemnities and commitments varies, and in certain cases, is indefinite. We believe that substantially all of our indemnities and commitments provide for limitations on the maximum potential future payments we could be obligated to make. However, we are unable to estimate the maximum amount of liability related to our indemnities and commitments because such liabilities are contingent upon the occurrence of events, which are not reasonably determinable. Management believes that any liability for these indemnities and commitments would not be material to our accompanying consolidated financial statements.

We do not have any other significant off-balance sheet arrangements, as defined in Item 303(a) (4) (ii) of SEC Regulation S-K, as of December 29, 2013 or December 30, 2012.

ITEM 7A. QUALITATIVE AND QUANTITATIVE DISCLOSURE ABOUT MARKET RISK

Interest Rate Risk

Our exposure to market risk for changes in interest rates relates primarily to our cash deposits, invested cash and debt. As of December 29, 2013, we had approximately \$282.2 million held in demand deposit accounts, approximately \$3.9 million held in overnight money market funds, approximately \$11.4 million invested in certificates of deposits partially insured by the FDIC and \$14.0 million held in time deposits. Our cash and short-term investment position is highly liquid, of which approximately \$286.1 million are with maturity terms of 0 to 30 days and \$25.4 million are with a maturity term of 181 to 365 days at the time of purchase. Accordingly, our interest income fluctuates with short-term market conditions, but our exposure to interest rate risk is minimal due to the short term nature of our cash and investment position.

On August 26, 2013, we completed an offering of \$150.0 million aggregate principal amount of Notes in a private placement. The Notes will mature on September 1, 2020, unless earlier repurchased or converted, and bear interest of 2.0% per year. In accounting for the Notes at issuance, we separated the Notes into debt and equity components according to the accounting standards for convertible debt instruments that may be fully or partially settled in cash upon conversion. Of the total debt obligations as of December 29, 2013, approximately 41% were fixed rate and 59% were variable rate. The Term Loan has a LIBOR floor of 1.25%. While LIBOR is below 1.25%, our interest expense will not change along with short-term change in interest rate environment. When LIBOR is above 1.25%, changes in interest rates associated with the Term Loan could then result in a change to our interest expense. For example, a 1% aggregate change in interest rates would increase or decrease our contractual interest expense by approximately \$3.0 million annually.

Default Risk

We intend to actively monitor market conditions and developments specific to the securities and security classes in which we invest. We take a conservative approach to investing our funds in that our policy is to invest only in highly-rated securities with relatively short maturities, and we do not invest in securities we believe involve a higher degree of risk.

The following table presents the cost basis, fair value and related weighted-average interest rates by year of maturity for our investment portfolio and debt obligations as of December 29, 2013 and comparable fair values as of December 30, 2012:

	2014	2015	2016	2017	2018	Thereafter	Total	2013 Fair Value	2012 Fair Value
(in thousands, except for percentages)

Weighted-average interest rate	3.75 %	3.75 %	3.75 %	3.75 %	3.75 %	3.75 %	3.75 %		
Total Debt Obligations	\$97,922	\$3,000	\$3,000	\$3,750	\$3,000	\$433,392	\$544,064	\$569,934	\$418,917

Foreign Exchange Risk

Our sales, expenses, assets and liabilities denominated in Japanese yen and other foreign currencies are exposed to foreign currency exchange rate fluctuations. For example,

some of our manufacturing costs are denominated in Japanese yen, and other foreign currencies such as the Thai baht and Malaysian ringgit;
sales of our products to Fujitsu are denominated in both U.S. dollars and Japanese yen; and
some fixed asset purchases and sales are denominated in other foreign currencies.

Consequently, movements in exchange rates could cause our net sales and our expenses to fluctuate, affecting our profitability and cash flows. We use foreign currency forward contracts to reduce our foreign exchange exposure on our foreign currency denominated assets and liabilities. We also hedge a percentage of our forecasted revenue denominated in Japanese yen with foreign currency forward contracts. The objective of these contracts is to mitigate impact of foreign currency exchange rate movements to our operating results. We do not use these contracts for speculative or trading purposes.

We recognize derivative instruments from hedging activities as either assets or liabilities on the balance sheet and measure them at fair value. Gains and losses resulting from changes in fair value are accounted for depending on the use of the derivative and whether it is designated and qualifies for hedge accounting. To receive hedge accounting treatment, all hedging relationships are formally documented at the inception of the hedge, and the hedges must be highly effective in offsetting changes to future cash flows on hedged transactions. We record changes in the intrinsic value of these cash flow hedges in accumulated other comprehensive loss in the Consolidated Balance Sheets, until the forecasted transaction occurs. When the forecasted transaction occurs, we will reclassify the related gain or loss on the cash flow hedge to revenue. In the event the underlying forecasted transaction does not occur, or it becomes probable that it will not occur, we will reclassify the gain or loss on the related cash flow hedge from accumulated other comprehensive loss to interest and other income (expense), net in our Consolidated Statements of Operations at that time.

We evaluate hedge effectiveness at the inception of the hedge prospectively as well as retrospectively and record any ineffective portion of the hedging instruments in interest and other income (expense), net on our Consolidated Statements of Operations.

We do not anticipate any material adverse effect on our consolidated financial position, results of operations or cash flows resulting from the use of these instruments in the future. However, we cannot assure you that these strategies will be effective or that transaction losses can be minimized or forecasted accurately. In particular, we generally cover only a portion of our foreign currency exchange exposure. We cannot assure you that these activities will eliminate

foreign currency exchange rate exposure. Failure to eliminate this exposure could have an adverse effect on our business, financial condition and results of operations.

The following table provides information about our foreign currency forward contracts as of December 29, 2013 and December 30, 2012:

	December 29, 2013			December 30, 2012		
	Notional Amount	Average Contract Rate	Estimated Fair Value	Notional Amount	Average Contract Rate	Estimated Fair Value
