RISK FACTORS

The securities are riskier than ordinary debt securities. You should carefully consider whether the securities are suited to your particular circumstances before you decide to purchase them. In particular, you should read the section entitled Risk Factors in the product supplement and consider all of the risks set forth below, in the product supplement and in the prospectus.

No guaranteed return of principal. With an investment in the securities, you bear the risk of losing some or all of the value of your principal if a knock-in event occurs during the term of the securities and the final stock price is less than the initial stock price. Under these circumstances, at maturity, for each security you hold, the maturity payment amount that you will receive will be shares of the Underlying Stock, which represents the number of shares of the Underlying Stock equal to the share amount multiplied by the share multiplier. In these circumstances, you will lose some or all of the value of the principal amount of your securities and receive shares of the Underlying Stock instead of a cash payment.

Yield may be lower. The yield that you will receive on your securities, which could be negative, may be less than the return you could earn on other investments. Even if your yield is positive, your yield may be less than the yield you would earn if you bought a standard senior non-callable debt security of Wachovia with the same maturity date.

Relationship to the Underlying Stock. You will have no rights against the Underlying Stock Issuer even though the market value of the securities and the amount you will receive at maturity depend on the performance of the Underlying Stock. The Underlying Stock Issuer is not involved in the offering of the securities and has no obligations relating to the securities. In addition, you will not receive any dividend payments or other distributions on the Underlying Stock, and as a holder of the securities, you will not have voting rights or any other rights that holders of the Underlying Stock may have.

No active trading market. The securities will not be listed or displayed on any securities exchange, the Nasdaq National Market or any electronic communications network. There can be no assurance that a liquid trading market will develop for the securities. The development of a trading market for the securities will depend on our financial performance and other factors such as the market price of the Underlying Stock. Even if a secondary market for the securities develops, it may not provide significant liquidity and transaction costs in any secondary market could be high.

Potential conflicts of interest. Wachovia or its affiliates may presently or from time to time engage in business that may adversely affect the price of the securities, including hedging activities. In addition, the inclusion of

commissions and projected profits from hedging in the original issue price is likely to adversely affect secondary market prices. In the course of business, Wachovia or its affiliates may acquire non-public information relating to the Underlying Stock Issuer and, in addition, one or more affiliates of Wachovia may publish research reports about the Underlying Stock Issuer. Wachovia does not make any representation to any purchasers of the securities regarding any matters whatsoever relating to the Underlying Stock Issuer.

SUPPLEMENTAL TAX CONSIDERATIONS

The following terms apply to the securities for U.S. Federal income tax purposes:

Interest Payment:	\$
Put Option Payment:	\$
Short-term Debt Instrument Treatment:	Applicable. The securities will be subject to U.S. federal income tax rules governing short-term debt instruments.

HYPOTHETICAL RETURNS

The following table illustrates the hypothetical maturity payment amount and corresponding hypothetical return at maturity per security (in each case, including interest payments), for a range of hypothetical final stock prices and the corresponding hypothetical price return of the Underlying Stock and whether or not a knock-in event has occurred. The examples are based on the following hypothetical terms:

a hypothetical initial stock price of \$8.50;

a hypothetical knock-in price of \$5.95;

an interest rate of 14.00%; and

an investment term of 280 days.

The figures below are for purposes of illustration only. The actual maturity payment amount and the resulting return (inclusive of coupons) will depend on the actual final stock price and whether or not a knock-in event occurs, each determined by the calculation agent as described in this free writing prospectus.
